Complete Specifications.

Patent Office, Perth,
30th June, 1899.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been *accepted*, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2526.—EDWARD JORDAN, Plumber and Metal Worker, and GEORGE THOMAS ROGERS, Plumber, both of 322 Elizabeth Street, Sydney, New South Wales, "*A Rotary Moulding machine for shaping Metal Sheets.*"—Dated 16th May, 1899.

Claims:—

1. In rotary moulding machines for shaping metal sheets, the lower and upper rotary dies provided with convoluted surfaces, and having a slit or recess, or several of such, to receive and retain the metal sheets preparatory to bringing the convoluted surface of one die into contact with the convoluted surface of the other die, as described and shewn.
2. In rotary machines of the class set forth, the combination upon a lower and upper rotary die of two or more moulding devices, either the same or of varying dimensions, adapted to produce O.G. guttering, mouldings, and such like, as described and illustrated, and for the purposes set forth.
3. In rotary machines of the class set forth, the combination with a lower rotary die of a detachable strip, alike adaptable to O.G. gutters of varying sizes adapted to produce a slit or recess, and the rounded bead as described and shewn, and for the purposes set forth.
4. In rotary machines of the class set forth, the combination with the upper and lower rotary dies of a detachable strip alike usable with the horn of the upper die and a portion of the convoluted surface of the lower die to either enlarge or reduce the dimensions of the article to be moulded, as described and shewn.
5. In rotary machines of the class set forth, the combination of two rotary dies, one of which is provided with horns to limit the range of movement, and to necessitate a reverse movement in the machine to produce more than one moulding operation, as described and shewn.
6. In rotary machines, the combination of the upper and lower rotary dies, with the heading devices such as are herein described, and for the purposes set forth.
7. In rotary machines of the class set forth, the combination with convoluted surfaces adapted to produce O.G. guttering of detachable dies to produce mouldings other than O.G. guttering, as described and shewn.
8. In rotary machines of the class set forth, the combination of the lower and upper rotary dies, provided with surfaces for attaching a variety of dies with convoluted surfaces, the whole being arranged for continuous rotary movement, as described and shewn.

9. A rotary moulding machine for shaping metal sheets, having a lower rotary die in a fixed bearing, and an upper rotary die in an adjustable bearing, combined with a cushioning spring, an adjustable cap, and a gapped standard for the said movable bearings, as described and shewn.

10. In rotary machines of the class set forth, the combination with the rotary moulding dies of equally geared wheels attached thereto to produce either continuous or intermittent motion as may be desired, as described and shewn, and for the purposes set forth.

11. The combination and arrangement of the parts herein described, the whole forming a complete rotary or semi-rotary machine, operated in the manner set forth, as described and illustrated.

Specification, 8s. 6d. Drawings on application.

Application No. 2535.—CHARLES EDWARD PONTON, and JOHN EDWARD PONTON, both of Wrekin Road, Wellington, in the County of Salop, England, Engineers, "*Improvements in Machines for dividing Dough and like Plastic Material.*"—Dated 23rd May, 1899.

Claims:—

1. In machines for dividing dough and like plastic material into portions of uniform weight, the construction and arrangements of parts ensuring the accurate and regular working handiness and durability of the machines, permitting of ready adjustment to the weight of the portions into which it is required to divide the material, and enabling the working parts to be safely and conveniently cleaned and inspected, substantially as described.
2. In machines for dividing dough and like plastic material into portions of uniform weight, the operation of the whole of the moving parts by gearing driven from a revolving fly-wheel J, such fly-wheel being so constructed and arranged as, to serve as a driving pulley and gearing guard, substantially as described.
3. In machines for dividing dough and like plastic material into portions of uniform weight, the adjustment of the stroke of the plungers as Q in the chambers of the division box N in such a manner as to ensure that whatever may be the length of stroke the inner faces of the plungers shall always be returned to a position in alignment with the scraper S, substantially as and for the purposes described.
4. In machines for dividing dough and like plastic material into portions of uniform weight, the use of spring buffers as T1 T2 for preventing belated movement of the cross-head Q2, with the attached plungers Q on the instroke of the division box N, substantially as described.
5. In machines for dividing dough and like plastic material into portions of uniform weight, means for enabling the plungers as Q with their rods Q1 and cross-head Q2 to be withdrawn and supported away from the guides A2 A3 for the purpose of cleaning and inspection, substantially as described.
6. In machines for dividing dough and like plastic material into portions of uniform weight, means for raising and supporting the main ram A for cleaning and inspection purposes, substantially as described.
7. In machines for dividing dough and like plastic material into portions of uniform weight, the use of arched cross-stays as A4 A5 between the cross-head and division box guides as A2 A3, and the construction and arrangement of the outer end of the said guides A2 A3 to permit of more convenient and accurate planing or machining and fitting of the casting, and to ensure sufficient rigidity to maintain its accuracy of alignment and fitting, substantially as described.
8. The improved dough dividing machine constructed and arranged substantially as and for the purposes described, and as illustrated in the accompanying drawings.

Specification, 15s. Drawings on application.
