*Claims:*—

1. A base or "carrier" for incandescent mantles consisting of glaucinum aluminate, in combination with an infinitesimal proportion of a metal of the platinum group as herein set forth.
2. A base or "carrier" for incandescent mantles, composed of glaucinum aluminate, or other stable earth or earths of high melting point, in a large proportion, mixed with a much smaller proportion of an oxide or oxides of the incandescent earths, all in combination with an infinitesimal proportion of a metal of the platinum group, as and for the purposes specified.
3. "Developers" that are applied to the "carriers" in incandescent mantles such "developers" being composed of a mixture of oxides, in which the oxides of indium or gallium are mixed with the oxides or metals of the incandescent earths approximately in the proportions specified in combination with a trace of a metal of the platinum group, which causes a catalytic action to be set up, as herein set forth.
4. A mantle for incandescent gas lighting, consisting of glaucinum aluminate with or without calcium and magnesium oxide or other "carriers", in which the oxides of gallium or indium are contained singly or in combination with other oxygen "carriers" or "developers" and with a metal of the platinum group distributed in minute and invisible proportions over the surface of the oxides, whereby a catalytic action is set up, as specified.
5. A mantle for incandescent lighting consisting of a body of incandescent earth or earths, metal or metals of relatively low light-giving capacity, combined with such minerals as indium, gallium, vanadium, as semi-developers, and a metal of the platinum group in exceedingly minute proportions whereby a catalytic action is secured as herein specified and for the purpose set forth.

6. In combination, an incandescent earth or earths, metal or metals of relatively low light-giving capacity in itself or themselves, and high melting point, approximately in the proportions specified, as a base, and a metal or metals of the platinum group, in infinitesimal proportion distributed over the base as a "developer" thereby causing a true catalytic action as herein specified and for the purpose set forth.

2. A new explosive compound consisting of liquid oxygen mixed with an oxidisable substance which is distributed in a finely divided condition upon a material affording a large amount of surface for contact with the oxygen, substantially as described.
3. The method of using an explosive compound such as is referred to in Claims 1 and 2, consisting in placing the oxidisable substance, preferably in a finely divided condition or contained in the pores of some absorbent material, in a case made of a substance which is a bad conductor of heat, and into which is poured the liquid oxygen or liquid air enriched in oxygen, the case being then introduced into the blast hole, substantially as described.

*Claims:*—

1. The herein-described process for the manufacture of water gas with two communicating generators one having a higher temperature than the other, the main features of the process being that each generator is alternately used as the hotter and then as the colder generator and that the steam is always blown into the colder generator traversing it in the same direction as the air current during the blast period, the mixed gasses thus produced together with the steam, which may have escaped decomposition, entering then the hotter generator passing it from top to bottom (that is to say against the direction of the air current of the blast period), substantially as described herein.
2. In the manufacture of water gas as described and claimed in Claim 1 the improvement in the process whereby the constant change of function of the two generators is effected by passing a hot blast after each gas-making period, through one of the two generators and particularly that one which has been passed firstly by the steam in the preceding gas-making period, all substantially as described herein.
3. In the manufacture of water-gas as described and claimed in Claims 1 and 2 the improvement in the process in which bituminous coal is used and in which the bituminous coal is charged always before the steam is passed through it and preferably into the colder generator only, substantially as described herein.
