### Complete Specifications.

Patent Office, Perth,  
22nd September, 1899.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2484.—HARRY PHILLIPS DAVIS, of 327 Neville Street, Pittsburgh, in the County of Alleghany, State of Pennsylvania, United States of America, Electrical Engineer, "*Improvement in Controllers for Electric Motors.*"—Dated 26th April, 1899.

#### Claims:—

1. A controller for electric motors in which the switch for varying the resistance in circuit with the motors is separated from the switch for varying the connection of the motors, the shafts of the two switches being connected by gearing so constructed that the operation of the resistance switch rotates the shaft of the other switch at different speeds at different periods of its movement, for the purpose specified.
2. A controller in which is provided a switch for varying the resistance in circuit, a second switch for varying the connections of the motors from series to parallel and *vice versa*, a third switch for reversing the connections of the motors when required, and cut-out switches for cutting either the motors out of circuit when desired, the second-named switch being connected by gearing with the resistance varying switch and through interlocking devices with the reversing and the cut-out switches, substantially as described.
3. A controller in which is provided a resistance varying switch connected by gearing with a switch for varying the connections of the motors, and combined cut-out and reversing switches connected through interlocking mechanism with the switch for varying the connections of the motors, substantially as described.
4. Controllers for electric motors constructed and operating, substantially as described.

Specification, 12s. Drawings on application.

Application No. 2569.—EDWARD WATERS, JUNIOR, a member of the firm of EDWARD WATERS & SON, of No. 131 William Street, Melbourne, in the Colony of Victoria, Patent Agent (*Isaac Smith*), "*An Improved Apparatus for Use as a Liquid Meter, Rotary Motor Pump, and similar Purposes.*"—Dated 20th June, 1899.

#### Claims:—

1. The combination of a drum provided with two or more spiral or similarly curved channels and an outlet to each channel, and an inlet port box provided with inlet ports and a directing cone constructed, arranged and operating substantially as herein described with reference to the accompanying drawings and for the purposes herein set forth.
2. The combination of a drum provided with two or more spiral or similarly curved channels whose sectional area decreases from the centre outwards, outlet ports in said drum to each channel therein, port box with inlet ports differing in number to the number of channels

in the drum and a cone for directing the inflowing liquid arranged and operating substantially as herein described with reference to the accompanying drawings and for the purposes herein set forth.

Specification, 4s. Drawings on application.

Application No. 2621.—PINTSCH'S PATENT LIGHTING COMPANY, LIMITED, of Leadenhall Street, in the City of London, England, Manufacturers (Assignee of T. C. J. Thomas and W. M. Still), "*Improvements in Gas Lamps for Railway Carriages.*"—Dated 1st August, 1899.

#### Claims:—

1. A gas lamp for a railway carriage constructed and operating substantially as described with reference to Figs. 1 to 9 inclusive.
2. The modified lamp for a lofty carriage substantially as described with reference to Fig. 10.
3. The by-pass cock and spindle arranged and operating substantially as described with reference to Figs. 11, 12, and 13.

Specification, 5s. Drawings on application.

Application No. 2626.—WILLIAM PATRICK, of Cue, Western Australia, Draper, "*An improved Acetylene Gas Generator.*"—Dated 31st August, 1899.

#### Claims:—

1. A carbide container which is attached to a carrier for the purpose of such container being placed within and removed from the gas chamber and such carbide chamber being provided with a seal which is broken by perforator during the total immersion of the carbide. Substantially as herein described and as illustrated in the accompanying drawings.
2. The general construction and combination of a generator having an extension compartment as A3 for to act as a passage way for the sealed carbide holder as D which latter is provided with a perforator appliance operated from the outside the whole as herein described and set forth and as illustrated in the accompanying drawings.

Specification, 4s. 6d. Drawings on application.

Application No. 2636.—ELIAS PETERSSON, of Avenue de la Couronne, No. 32, Brussels, Belgium, Engineer, "*An improved process for the treatment of Sulphurous Ores containing Arsenic, Antimony, and Tellurium.*"—Dated 15th August, 1899.

#### Claim:—

1. A process of disaggregation of sulphurous ores containing arsenic, antimony or tellurium consisting in pulverizing the ore, in mixing the same with carbon likewise pulverized without addition of any salt and in heating the mixture in a muffle furnace, substantially as above described and for the purpose specified.

Specification, 4s.

Application No. 2645.—CHARLES CROSSLAND, of Perth, in the Colony of Western Australia, Licensed Surveyor, "*An improved Amalgamating Cradle for Slimes and other Pulverised Gold bearing Material.*"—Dated 21st August, 1899.

#### Claims:—

1. In an improved amalgamating cradle for slimes and other pulverised gold material the extra distance for the slimes and other material to travel over as described in the specification, and illustrated in the drawings within a compact simply and cheaply made box or cradle.
2. The rocking motion described in specification whereby the material under treatment is kept in an agitated state causing the gold to be precipitated.
3. The combination of the parts of the cradle and rockers and the details of construction particularly as described in the specification and illustrated in the drawings.

Specification, 3s. 6d. Drawings on application.

Application No. 2648.—WILLIAM HENRY LAWRENCE, of 158 Kenmore Street, Pollokshields, Glasgow, Scotland, Engineer, and ROBERT KENNEDY, of 109 South Portland Street, Glasgow, Scotland, Dairyman, "*Improvements in Milking Apparatus.*"—Dated 22nd August, 1899.

*Claims:—*

1. In a milking machine the combination with pulsating apparatus operated by suction of a milk receptacle having one compartment (A) connected to suction producing apparatus and to a front B1 in the pulsator and a separate compartment A2 connected to another part in the pulsator and in which latter compartment a minimum degree of vacuum is maintained automatically by the action of the pulsator in conjunction with an air admission valve H1 controlled by the vacuum.

2. In a pulsating apparatus operated by suction producing apparatus at a distance therefrom, the arrangement of a cylinder (B) having in it four parts (B1, B2, B3, B4) arranged in pairs and communicating one pair (B3, B4) with the milk pail and an inspection cup E and the other pair (B1, B2) with said cup E and with the minimum vacuum storage A2 and a piston C reciprocated by vacuum and having formed in it a recess (C) adapted to alternately connect the maximum and the minimum sections with the inspection cup E.

3. In a pulsating apparatus of the kind referred to in the preceding claim a reversing valve D formed with vertical grooves extended from annular grooves (D1, D2) communicating one with the vacuum and the other with the atmosphere the vertical grooves being so arranged that the pressure and vacuum act equally on all sides.

4. For use in a milking machine a test cup formed by a rubber sleeve (M1) fitted to slide on a metallic cylinder (M2) through which the milk is drawn the sleeve (M1) being adjustable upon the cylinder to suit varying lengths of cows' teats.

Specification, 13s. Drawings on application.

Application No. 2653.—CARL EMIL SCHNEF, Doctor of Medicine, of Karlsbad, in the Empire of Austria, "*Improvements in Bath Apparatus for treatment with electricity and medicinal substances.*"—Dated 29th August, 1899.

*Claims:—*

1. Electric four-tub bath with four absolutely separated tubs of non-conducting material (preferably porcelain) each of which receives one limb and which can be connected in different combinations for every kind of treatment of the body combined with an adjustable bathing chair, substantially as described and for the purpose set forth.

2. Electric four-tub bath with four absolutely separated tubs of non-conducting material (preferably porcelain) each of which receives one limb and which can be connected in different combinations for every kind of treatment of the body, combined with an adjustable bathing chair, the arm rest which carrying plates, receiving the arm tubs and being capable to be elevated and lowered, to be horizontally removed and to be turned in the horizontal plane, substantially as described and for the purpose set forth.

3. Electric four-tub bath with four absolutely separated tubs of non-conducting material (preferably porcelain) each of which receives one limb and which can be connected in different combinations for every kind of treatment of the body combined with an adjustable bathing chair, the seat plate of which can be elevated and lowered and removed in front substantially as described and for the purpose set forth.

4. Electric four-tub bath with four absolutely separated tubs of non-conducting material (preferably porcelain) each of which receives one limb and which can be connected in different combinations for every kind of treatment of the body, combined with an adjustable bathing chair, the seat and the back support of which is covered with an insulating covering substantially as described and for the purpose set forth.

5. Electric four-tub bath with four absolutely separated tubs of non-conducting material (preferably porcelain) each of which receives one limb and which can be connected in different combinations for every kind of treatment of the body, combined with an adjustable bathing chair, the arm rest of which carrying plates, receiving the arm tubs and being capable to be elevated and lowered to be horizontally removed and to be turned in the horizontal plane, presenting the following characteristics:—Each arm rest consists of three plates showing a plane view corresponding to the tub form, the lowest plate (f, F) being carried by two racks (c) held in position by a pivotally mounted bar (e), the lowest plate (f, F) carrying two bars (g, g') guiding the middle plates (h, h') with corresponding grooves while to the latter the third plate (k, k') is attached by means of pivots (i, i') substantially as described and for the purpose set forth.

6. Electric four-tub bath with four absolutely separated tubs of non-conducting material (preferably porcelain) each of which receives one limb, and which can be connected in different combinations for every kind of treatment of the body, combined with an adjustable bathing chair, the arm rest of which carrying plates, receiving the arm tubs and being capable to be elevated and lowered, to be horizontally removed and to be turned in the horizontal plane, presenting the following characteristics:—Dove-tailed bars (g) provided on the underside of the seat plate (d) fit in corresponding dove-tailed grooves secured in the bars (p, pl) of the seat frame the latter carrying on each corner a rack (l) which can be held in position by means of bars (a) with sharpened ends fitting with the gaps of the rack teeth, substantially as described and for the purpose set forth.

Specification, £1 2s. Drawings on application.

Application No. 2658.—ALBERT EDWARD HODDER and JOHN BINGLEY GARLAND LESTER, Engineers, both of 49 Queen Victoria Street, in the City of London, England, "*Improvements in or relating to the Manufacture and Distribution of Gas for Lighting and Heating.*"—Dated 2nd September, 1899.

*Claims:—*

1. In the manufacture of gas the combination with an air supply under pressure controlled by a relief valve or otherwise of a generator comprising two or more annular chambers one within another fitted with spiral vanes a different hydrocarbon in each chamber separate conduits for supplying air to each hydrocarbon provided with valves with or without a central mixing chamber containing a purifying or enriching agent substantially as and for the purpose described.

2. In the manufacture of gas a generator having two or more annular chambers one within another fitted with spiral vanes a different hydrocarbon in each chamber separate conduits for applying air to each hydrocarbon provided with valves and a central mixing chamber containing a purifying or enriched agent arranged and operating substantially as and for the purpose described.

3. The complete gas generating apparatus substantially as described and illustrated in the accompanying drawings.

Specification, 4s. Drawings on application.

Application No. 2664.—JOHN OSTBERG, of No. 10 Balston Street, St. Kilda, in the Colony of Victoria, Engineer, "*An improved Automatic Rubber Repairing Compound for Application to the Inner Tubes of Pneumatic Rubber Tyres generally, and like Purposes.*"—Dated 5th September, 1899.

*Claim:—*

1. The composition consisting of the ingredients in the relative quantities, and compounded and applied as hereinbefore set forth as an automatic puncture-filling and hermetically-sealing substance when coated on the inside of the bladders of pneumatic rubber tyres, and for all other kindred purposes to which it may be successfully applied.

Specification, 3s. 6d.

Application No. 2667.—FREDERICK BAKER, of "Maylands," Kambrook Road, Caulfield, near Melbourne, in the Colony of Victoria, Builder, "*An improved Lock-nut principally adapted for railway purposes.*"—Dated 5th September, 1899.

*Claim:—*

1. The herein described nut lock for railway and other purposes comprising a bolt having its lower end split longitudinally and having an axial hole formed in it from end to end, with the lower end of said hole tapering to receive a pin or key whereby the lower end of the bolt can be expanded in combination with a nut having a tapering hole substantially as and for the purposes herein described and explained and as illustrated in the accompanying drawings.

Specification, 4s. Drawings on application.
