Complete Specifications.

Patent Office, Perth,
6th October, 1899.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been *accepted*, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2677.—AUGUST JULIUS METZLER, of Sydney, New South Wales, Brewer, "*Improvements in the Gelatinising of Brewing Grain.*"—Dated 12th September, 1899.

Claims:—

1. The improvement in the gelatinising of brewing grain which consists in subjecting the same whilst in contact with piecing-up liquor continuously and in relatively small quantities to the heating and disintegrating action of a jet of steam, substantially as described.

2. The improvement in the gelatinising of brewing grain which consists in blowing steam into a continuous stream of the same in piecing-up liquor drawn from the mash tub, whilst passing through a chamber of limited dimensions, substantially as described.

3. The improvement in the gelatinising of brewing grain which consists in forcibly disintegrating the starch cells and intimately exposing the same for a limited time to a high temperature by means of a jet of steam acting on a continuous current of said grain in piecing-up liquor, whilst passing from and to the mash tub, through a tortuous chamber or pipe, substantially as described.

4. The improvement in the gelatinising of brewing grain which consists in circulating a stream of such grain in piecing-up liquor which is drawn from and returned to the mash tub through a tortuous chamber or passage of limited dimensions, and acting on such stream therein by means of a jet of steam which imparts sufficient heat to the contents of the mash tub to keep the same boiling, substantially as described.

Specifications, 7s. Drawings on application.

Application No. 2678.—ALPHONSE DENAEYER, of 3 Place Liedts, Brussels, Belgium, Chemist, "*Improved Manufacture of Cocoa, Chocolate, or other Alimentary Substances.*"—Dated 12th September, 1899.

Claims:—

1. The process for producing compounds of alimentary substances mixed with milk, and in particular compounds of cocoa and chocolate, which consists in first partially evaporating the aqueous constituents

from a charge of milk and after mixing therewith the cocoa, chocolate or other alimentary substance, subjecting the mass to evaporation to dryness by heating it in a vacuo or under exhaust, substantially as described.

2. In a manufacture of compounds of cocoa and chocolate with milk produced by first subjecting a mixture of milk and sugar to partial evaporation, under continual stirring then mixing the powdered cocoa or chocolate therewith then subjecting the mixture to complete evaporation in a heated apparatus, subject to vacuum or exhaust and finally desiccating the dried mass in a desiccating apparatus also under vacuum or exhaust, substantially as described.

3. For carrying out the process referred to in the first and second claims, the combination with a preliminary evaporating pan with stirring device such as is described with reference to Figure 1, firstly of a vacuum evaporating apparatus consisting of a column-shaped vacuum evaporating vessel such as b1 surrounded by a jacket such as a1 containing a heating coil such as c1 and filled with paraffin or other suitable liquid, the vessel b1 serving to contain a number of superposed open pans v1 v1 containing the compound to be evaporated and having handles w1 w1 serving as supports for the pan above, the evaporating column being closed at top by a removable cover d, which is connected by a pipe h1 with a condensing apparatus such as p1 with reservoir r1, communicating with an exhaust pump, such as is described with reference to Figure 2, and secondly of a desiccating apparatus such as described with reference to Figure 3, the said combined apparatus being arranged and operating as herein described with reference to the accompanying drawings.

Specification, 8s. 6d. Drawings on application.
