Complete Specifications.

Patent Office, Perth,
13th October, 1899.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been *accepted*, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2465.—JOHN WILSON ARCHIBALD, of Sylvester Street, Coolgardie, in the Colony of Western Australia, Mechanical Engineer, "*A Pneumatic Elevator*."—Dated 12th April, 1899.

Claim:—

1. The combination of the elevator pipe B, sunk in a shaft A of varying depth as circumstances may require, a delivery pipe Ba, and an air pipe C, for the purpose of raising tailings and other mining material when held in solution by the application of compressed air substantially as shown and described. I do not confine myself to the measurements or proportions as above given, but claim as my invention the application in pneumatic elevators of the principle of introducing into the elevator pipe alternate pistons of liquid and air by which the liquid is raised to the elevation required.

Specification, 2s. 6d. Drawings on application.

Application No. 2503.—ARTHUR FRANCIS BRIDGES, of Gisborne, in the Colony of New Zealand, Settler (Assignee of JAMES SMITH ALLAN), "*An Improved Rain-water Filter*."—Dated 8th May, 1899.

Claims:—

1. In rain-water filter hereinbefore described, the combination with a head (having a lid or cover) and an outer tube or piping joined to bottom of said head and having at its bottom end a "treacle gate" or any other convenient means of drawing off water or dirt, of a partition in said head, cylindrical strainer with a lid and having wire gauze projecting at right angles and soldered to same, inner tube or piping running from the spouting below the roof of building through said strainer and into said outer tube or piping, one or more outlet pipe or pipes running from said head and a filtering substance covered over with wire gauze, substantially as hereinbefore illustrated and described.

2. In a rain-water filter hereinbefore described, the arrangement with a head (having a lid or cover) and an outer tube or piping joined to bottom of said head and having at its bottom end a "treacle gate" or any other convenient means of drawing off water or dirt, of partition, strainer, inner tube or piping, one or more outlet pipe or pipes, and filtering substance covered over with wire gauze, substantially as hereinbefore illustrated and described.

3. The improved rain-water filter hereinbefore illustrated and described.

Specification, 7s. 6d. Drawings on application.

Application No. 2599.—JOHN MILLAR DONNES, Accountant, and HENRY WILLIAM TIMS, Mechanic, both of Kanowna, Western Australia, "*An Improved Dry Blower*."—Dated 11th August, 1899.

Claim:—

1. The herein described apparatus for the dry blowing of gold by means of air currents which are diverted in an upward direction and made to pass through the final screen so as to impart a dancing or boiling action to the fine auriferous matter, the whole substantially as herein set forth and as illustrated in the accompanying drawings.

Specification, 2s. Drawings on application.

Application No. 2649.—THOMAS EDWARD MEATS, of Plympton, in the Colony of Western Australia, Labourer, "*An Improved Machine for the Extraction of Minerals, chiefly gold or tin, and Precious Stones, to be known as 'The Giant Gold or Tin Separator'*."—Dated 22nd August, 1899.

Claims:—

1. In the extraction of minerals chiefly gold or tin and precious stones the passing of the material to be treated through a drum constructed as detailed, substantially in the manner herein described and explained.

2. In the extraction of minerals chiefly gold or tin and precious stones the combination of the drum and the passing of the material to be treated for tin under the rollers and the passing of the material to be treated for gold and precious stones amongst iron balls or blue metal or similar substitute for blue metal as the nature of the material requires, substantially and in the manner herein described and explained.

3. In the extraction of metals chiefly gold or tin and precious stones the passing of the material to be treated through a drum constructed as detailed and in combination with rollers or balls of iron or blue metal or similar substitute for blue metal revolving in a trough constructed as detailed and in manner herein described and explained.

4. In the extraction of minerals chiefly gold or tin and precious stones the particular construction of a drum in combination with rollers or iron balls or blue metal or other similar substitute for blue metal in connection therewith and a trough as described in this specification and illustrated by the drawings.

Specification, 5s. 6d. Drawings on application.

Application No. 2679.—OLIVER PARKER, of Kalgoorlie, Western Australia, Engineer, "*Improved construction of low pressure Boilers whereby their clean-out is made easy*."—Dated 13th September, 1899.

Claims:—

1. The construction of boilers in sectional parts as A and B which are held together by the strap plates as A2 and B2 substantially as and for the purposes herein set forth and as illustrated in the accompanying drawings.

2. The use of a longitudinal set off plate C for to form chamber for the reception of packing the face edge of the lower section as B together with packing for the obtainment of a water and steam tight joint at the junction of each respective sections as A and B substantially as and for the purpose herein set forth and illustrated in the accompanying drawings.

3. The general arrangement and construction of a boiler made in sections and secured to each other by strap plates and provided with means whereby a water and steam tight joint is obtained at the junction of such sections substantially as and for the purpose herein set forth and as illustrated in the accompanying drawings.

Specifications, 3s. 6d. Drawings on application.

Application No. 2680.—HENRY ALEXANDER HANCOX, Draughtsman, and ROBERT JAMES HANCOX, Engineer, both of 151 Mansfield Street, Balmain, Sydney, New South Wales, "*Improvements in Rotary Engines alike adaptable to Rotary Pumps.*"—Dated 16th September, 1899.

Claims:—

1. In rotary engines provided with an annular piston chamber, a piston disc carrying one or more piston blocks provided with top and bottom covering plates having suitable tongues and overlapping margins and actuated by means of concealed springs, as described and shown, and for the purposes set forth.

2. In rotary engines of the class set forth, the combination, with a rotary disc carrying one or more piston blocks, of, jointing rings having steam lubricating grooves and secured to circular clamping plates and operated by concealed springs, as described and shown, and for the purposes set forth.

3. In rotary engines of the class set forth, the combination, with a rotary disc carrying one or more piston blocks, of, side covers having stiffening webs, stuffing boxes, and adjustable stiffening rings, and secured to circular clamping plates, as described and shown, and for the purposes set forth.

4. In rotary engines of the class set forth, a detachable outer casing divided centrally, and a disc whose side surfaces are in contact with the grooved edges of jointing rings, the whole combined to form an annular piston chamber, as described and shown, and for the purposes set forth.

5. In rotary engines of the class set forth, the combination, with an annular chamber as claimed in Claim 4, of one or more steam admission chambers having a central slide passage and associated steam passages, communicating with a valve chamber, having inlet ports for the simultaneous inflow and exit of the steam into the said annular chamber, as described and shown, and for the purposes set forth.

6. In rotary engines of the class set forth, the combination, with an annular chamber of the kind described, of a radial slide with steam cavities formed therein, and, a central slide block made adjustable and operated in the manner described, as described and shown, and for the purposes set forth.

7. In rotary engines of the class set forth, the combination with an annular chamber constructed in the manner described, of, a radial slide provided with an adjustable slide block, an actuating lever therefor combined with slide levers and retained in position with slide springs and actuated by cams, as described and shown, and for the purposes set forth.

8. In rotary engines of the class set forth, the combination, with a rotary piston provided with one or more piston blocks whose covering plates are expandible by means of concealed springs, and an annular chamber of the kind described, of, a steam admission chamber with its associated ports and passages, whose slide valve is operated in the manner described and shown, and for the purposes set forth.

9. The combination of a rotary engine of the kind described with a rotary pump whose piston and annular chamber are similarly constructed, as and for the purposes herein described and illustrated in the drawings.

10. The general combination and arrangement of the parts herein described, the whole forming an improved rotary engine, as described and as illustrated in the drawings.

Specifications, 9s. Drawings on application.
