* One ton of flour estimated equivalent to 50 bushels of wheat.

On the assumption that the mean population for the year 1904 will be 236,000, and that the requirements of wheat for food per head of population will be 7.5 bushels, the total amount required for food during 1904 will be 1,770,000 bushels.

To this must be added the quantity of seed to be sown for grain and hay during the season, which, on the basis of the experience of recent years, may be roughly estimated at 260,000 bushels.

The total amount of wheat required by this State during 1904 will thus be 2,030,000 bushels. According to the preliminary wheat returns for the present season, it appears that the aggregate wheat yield for the whole State is approximately 1,900,000 bushels, thus leaving only 130,000 bushels of wheat, or its equivalent in flour, that it will be necessary to obtain from outside sources. This may be summarised as follows:—

ESTIMATES FOR 1904.

Mean population	236,000
Consumption per head of wheat for food	7.5 bushels
Total food requirements	1,770,000 bushels
Seed requirements... ..	260,000 „
Gross requirements for food and seed	2,030,000 „
Preliminary returns of wheat production for season ended February, 1904	1,900,000 „
Estimated requirements from outside sources	130,000 „
