WEIGHTS AND MEASURES ACT, 1915-1958.

Office of Commissioner of Police,
Perth, 12th December, 1961.

HIS Excellency the Governor in Executive Council, acting pursuant to the provisions of the Weights and Measures Act, 1915-1958, has been pleased to make the regulations set forth in the schedule hereunder.

J. M. O'BRIEN,
Commissioner of Police.

Schedule.

Regulations.

Principal regulations.

1. In these regulations the Weights and Measures Regulations, 1927, published in the *Government Gazette* on the 3rd June, 1927, and amended from time to time thereafter by notices published in the *Government Gazette*, are referred to as the principal regulations.

Reg. 113DD added.

2. The principal regulations are amended by adding after regulation 113D the following regulation:—

113DD. (1) In this regulation "calibrated tank" means any composite tank, road tank wagon, rail tanker, barge or like device used, or intended to be used to sell and deliver petroleum liquid products in bulk quantities to resellers and others and includes any dip stick used in connection therewith.

(2) Where any calibrated tank that is in existence and in use, at the commencement of this regulation, has been certified by, and for the purposes of, the Customs Department of the Commonwealth, that calibrated tank is exempt from the provisions of this regulation, for a period of twelve months after its commencement.

(3) A calibrated tank is deemed to be a measuring instrument used for trade.

(4) A calibrated tank may be subdivided into two or more compartments.

(5) Every calibrated tank shall—

- (a) be legibly, prominently and indelibly marked with a serial number for identification;
- (b) be of such strength and construction as not to be liable to become distorted during transport or use;
- (c) be complete with all internal and external fittings before being verified;

- (d) stand on a level base and, if fitted with pneumatic tyres, have the tyres inflated to correct pressure;
- (e) if having more than one compartment, have each compartment legibly, prominently and indelibly numbered consecutively, from front to rear, on the body of the compartment adjacent to the dip hatch;
- (f) have a dip tube of a diameter of not more than three inches or such other diameter as may be approved by the Commissioner, fully vented and so positioned as to be approximately in the vertical axis of the tank and centrally positioned with respect to the tank walls;
- (g) have no obstruction therein likely to foul the dip stick when in use;
- (h) except in the case of a tank which is calibrated and verified by the discharge of liquid therefrom, have an inspection opening of sufficient size to enable the convenient inspection of the inside of the tank;
- (i) except in the case of a tank so constructed that the base of the tank itself forms a satisfactory dip plate, be fitted with a dip plate, below the dip tube, parallel with the horizontal axis of the tank, and of such size as to prevent the dip stick going past the dip plate;
- (j) be provided with such effective venting means as to prevent the formation of air pockets in a compartment, by permitting the escape of air from all parts of a compartment designed to be filled with liquid, and such as to permit the influx of air to a compartment, during discharge therefrom;
- (k) have any dome flange extending into a compartment provided with such sufficient perforations or openings flush with the compartment shell as to prevent any trapping of air;
- (l) have any baffle plates in a compartment so cut away at the top and bottom and elsewhere as may be necessary to facilitate loading and unloading;
- (m) be so constructed that, when standing on a level surface, it permits of complete delivery, from any compartment, through its delivery valve, whether other compartments are full or empty;
- (n) have any delivery line set at an angle of not less than three degrees below the horizontal;
- (o) where the pipe lines are included in the calibration, be calibrated with all internal valves open; and, where the pipe lines are not included in the calibration, be calibrated with all internal valves closed;
- (p) be legibly, prominently and indelibly marked with a statement indicating whether or not the pipe lines are included in the calibration;
- (q) where so constructed that a quantity of liquid remains in the sump after complete delivery, be calibrated so as to exclude that quantity from readings on the chart and dip stick;
- (r) where containing more than one compartment, have each separate compartment and dip stick to be used therewith, clearly and unmistakably identified one with the other;

- (s) where its two or more compartments discharge through a common manifold or other single outlet, be provided with such effective and automatic means as to prevent liquid from one compartment by-passing the outlet, on discharge, into another compartment; or otherwise such as to ensure that all compartments are discharged simultaneously;
 - (t) on verification, be correct at every capacity corresponding with the graduations marked on the dip stick provided for use therewith; and
 - (u) be provided with suitable means to enable an inspector readily to stamp it with a mark of verification.
- (6) A calibrated tank shall not be used for trade unless verified and stamped with a mark of verification but once so verified and stamped, a calibrated tank may be used for trade, until such time as the Commissioner, by notice, requires it to be reverified.
- (7) The errors permissible on verification of calibrated tanks shall be those prescribed for wholesale flow meters by Table 5 of Part XI of these regulations.
- (8) Every dip stick shall—
- (a) be made of brass or other suitable metal approved by the Commissioner, the graduated side of which shall be so treated so as to give a clear reading on being dipped;
 - (b) where so constructed as to be removed from the dip tube when not in use, be heavily scribed around at the level of the top of the dip tube, as an aid to dipping;
 - (c) have all gallonage marks and figures clearly and permanently stamped or engraved thereon;
 - (d) be graduated in one gallon quantities for the first ten gallons and be denominated at the ten gallon graduation and at every like graduation thereafter; but the Commissioner may permit variations of those graduations, if, in his opinion, those variations are not such as are liable to facilitate fraud;
 - (e) be graduated for use with one compartment only;
 - (f) be provided with suitable means to enable an inspector readily to stamp upon it a mark of verification;
 - (g) be provided with a centre punch mark or other suitable indication, on one of its ungraduated sides, within six inches of the bottom; and have the distance between that mark and the bottom of the dip stick legibly stamped or engraved thereon; and
 - (h) be legibly stamped or engraved with the serial number corresponding with the serial number of the calibrated tank or compartment with which it is to be used.
- (9) A dip stick shall not—
- (a) be used for trade unless verified and stamped, or
 - (b) be used to determine the quantity of liquid in any tank or compartment other than the tank or compartment with which it was calibrated.
- (10) The fee for the verification of a calibrated tank is as prescribed by Table XIII A of these regulations for such instruments.

Table XIII A amended. 3. Table XIII A of the principal regulations is amended by adding after the item, "Petroleum system" the following item and fee:—

	£	s.	d.
