10. (1) This clause applies to batten rock lobster pots.

(2) Subject to this clause, every batten rock lobster pot is to have inserted in it a device to create an escape gap that is as nearly as practicable rectangular in shape, and when measured internally, is to measure not less than 305 millimetres in length and not less than 54 millimetres in height.

(3) The escape gap in a batten rock lobster pot is to be —

- (a) positioned on a side of the pot, other than the base, in the rear half of the pot or at the end opposite the hauling rope attachment point or points and is to be positioned in accordance with Diagram 3 in the Table; and
- (b) located at least 150 millimetres away from the attachment point or points of the hauling rope and, where there are 2 attachment points, not between those points.

(4) When fitted to the rock lobster pot, the longer sides of the escape gap are to be generally parallel to the base of the pot and the lower internal edge of the escape gap is to be not more than 110 millimetres from the base of the pot.

(5) An escape gap is to be constructed of the materials and to the specifications set out in clause 4 (7).

(6) The material to which an escape gap is attached in the horizontal plane is not to be —

- (a) constructed of a material thicker than 13 millimetres;
- (b) in the horizontal plane, within 5 millimetres of the internal edge of the escape gap; or
- (c) provided that the escape gap is attached internally to the framework running horizontally along the bottom of the pot and the bottom internal edge of the escape gap is not within 10 millimetres of the attachment material, then the material to which the gap is attached may be greater than 13 millimetres but not more than 25 millimetres in thickness.

Plastic pots

11. (1) This clause applies to plastic rock lobster pots.

(2) A plastic rock lobster pot is to have inserted in it a device to create an escape gap that is as nearly as practicable rectangular in shape and when measured internally is to measure not less than 305 millimetres in length and not less than 54 millimetres in height.

(3) The escape gap in a plastic rock lobster pot is to be positioned —

- (a) on a side, other than the base, in the rear half of the pot opposite the hauling rope attachment point or points;

- (b) so that the longer sides of the gap are generally parallel to the base of the pot and the lower internal edge of the escape gap is no more than 110 millimetres from the base of the pot as specified in Diagram 8 in the Table; and
 - (c) at least 150 millimetres away from the attachment point or points of the hauling rope and where there are 2 attachment points, not between those points.
- (4) An escape gap is to be constructed —
- (a) of the materials and to the specifications set out in clause 4 (7); or
 - (b) of plastic with a thickness of not less than 3 millimetres and not more than 6 millimetres.
- (5) The material to which an escape gap is attached in the horizontal plane is not to be —
- (a) constructed of material which is thicker than 13 millimetres; or
 - (b) in the horizontal plane, within 5 millimetres of the internal edge of the escape gap.

Other pots

12. (1) This clause applies to all rock lobster pots, other than beehive pots, batten pots or plastic pots.

(2) Every rock lobster pot is to have inserted in it a device to create an escape gap that is as nearly as practicable rectangular in shape and when measured internally each is to measure not less than 305 millimetres in length and not less than 54 millimetres in height.

- (3) An escape gap is to be positioned —
- (a) on a side, other than the base, in the rear half of the pot or at the end of the pot opposite the hauling rope attachment point or points;
 - (b) so that the longer sides of the gap are generally parallel to the base of the pot and the lower internal edge of the escape gap is no more than 110 millimetres from the base of the pot; and
 - (c) at least 150 millimetres away from the attachment point or points of the hauling rope and where there are 2 attachment points, not between those points.
- (4) An escape gap is to be constructed of the materials and to the specifications set out in clause 4 (7).
- (5) The material to which the escape gap is attached in the horizontal plane is not to be —
- (a) constructed of material which is thicker than 13 millimetres; or
 - (b) in the horizontal plane, within 5 millimetres of the internal edge of the escape gap.

Specifications applicable to all pots

13. (1) This clause applies to all rock lobster pots.

(2) A rock lobster pot is not to have any form of chamber or partition in the pot which is capable of containing rock lobster other than that formed by the external frame of the pot.

(3) An escape gap is not to have any obstruction positioned in such a way as to restrict the movement of rock lobsters through the escape gap or to reduce the internal measurements of the escape gap, except as provided in clause 9 (2) (b).
