### Application for Amendment.

IN the matter of Letters Patent No. 1347, dated 26th October, 1896, granted to EDGAR ARTHUR ASHCROFT for an Invention for "*An improved Process for the Treatment of Metalliferous Ores and Products.*"

Notice is hereby given that the above-mentioned EDGAR ARTHUR ASHCROFT, of 34 Queen Street, Melbourne, in the Colony of Victoria, Electrical Engineer, has applied to amend the complete specification and drawings of his said Invention, alleging as his reason for so doing "for the purpose of better explaining the working of the process, correcting certain errors of description, and better defining and limiting the scope of the claims."

The Amendments proposed are as follows, viz.—[*Reference being had to amended Copy of Specification lodged in Patent Office, Perth.*]

Page 3.

Line 10.—After the word "solution" insert the words "in the anode chamber."

Line 11.—After the words "may be" insert the word "subsequently."

Line 12.—Strike out the words "another batch."

Line 13.—Insert the word "same" before the word "solution."

Line 14.—Strike out the word "simultaneously" and insert the word "also."

Line 16.—After the word "diaphragms" insert the words "in such electrolysis the solution, after the copper has been deposited on the copper cathode, is led into the anode compartment, where the oxidation of the dissolved ferrous salts into ferric salts proceeds."

Line 19.—After the word "ores" insert the words "the process hereinafter described in full with reference to Figures 1, 2, and 3 of the accompanying drawings, will be best understood by the following preliminary description of the electrolytic part of the operation with reference to the diagram, figure 4. The solution containing salts of zinc practically pure is led into the vats A and B (figure 4 of the drawings), which are duplicated coming into the cathode compartments K. The zinc is partially deposited in the cathode chambers. The solution then passes into the anode chamber H. The anodes copper mattes, and consequently copper and ferrous salts become added to the solution. The solution is then led into the cathode chambers of another vat, C, where the copper is taken out as refined metal. Hence the solution, containing only zinc and ferrous salts, passes to the anode chamber of the same vat, C, where, in contact with carbon anodes, its iron content becomes oxidised to the ferric state.

Three vats are shown diagrammatically in series, so that the quantities of metals are correctly proportioned for cyclic working in connection with the leaching process. If the matte contain more than the best proportion of iron, part of the liquid from the cathode chamber of C, when freed from copper, is led into the anode chamber of a similar subsidiary vat with carbon anodes, where the ferrous salt is oxidized in the anode chamber. The cathode chamber of this subsidiary vat is fed with pure zinc solution, from which zinc is deposited on the zinc cathode. The solution from cathode chamber of this subsidiary vat is then added to the anode solutions in A and B. If, on the other hand, the matte contain too much copper, a subsidiary vat is interpolated between C and A and B with iron anodes and copper cathodes and no diaphragm. Copper is thus deposited and iron goes into the solution. Merely treating the liquid with metallic iron may suffice. The pipes *d d e* shown in the diagram connect the anode and cathode compartments in each vat.

Page 6.

Line 25.—Strike out the word "the" before the word "zinc."

Page 9.

Line 21.—Strike out the words "in a zinc depositing vat."

Line 24.—After the word "iron" insert the words "as the anode of a zinc depositing vat."

Page 10.

Line 7.—Strike out the word "otherwise" and insert the words "other metal."

Line 12.—Strike out the words "and other."

Line 13.—After the word "salt" insert the words "for use as a leaching solution while the other metal of the matter, viz., copper, is being deposited." Also strike out the words "for leaching roasted zinc ore."

Any person or persons intending to oppose the said application for Amendment must leave particulars, in writing (on Form G), of his or their objection thereto within one calendar month from the date hereof. A fee of ten shillings and sixpence (10s. 6d.) is payable with such notice.

Dated this 7th day of May, 1897.

MALCOLM A. C. FRASER,  
Registrar of Patents.

Patent Office, Perth,  
7th May, 1897.
