Complete Specifications.

Patent Office, Perth,
16th February, 1900.

NOTICE is hereby given that the undermentioned applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been *accepted*, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2618.—WILLIAM TAMO, JOSEPH EMBLETON, and JOHN BALLANTYNE, all of Burbanks, near Coolgardie, Western Australia, Miners, "*Improved Stage Support Bar for use in Mines*."—Dated 28th July, 1899.

Claims:—

1. A stage support bar constructed of any number of sections which are provided with screw-threaded spigot and faucet connections and an adjustment bar likewise screw-threaded substantially as and for the purposes herein specified and illustrated in Figure 1 of the accompanying drawing.

2. The tubular construction of a stage support bar sectional piece as herein described and as illustrated in Figure 2 of the attached drawing.
Specification, 2s. 6d. Drawings on application.

Application No. 2771.—DAVID HATT, of Broad Arrow, Western Australia, Plumber, "*An Improved Construction of Condenser for Evaporating Salt or Impure Water*."—Dated 16th November, 1899.

Claim:—

1. The herein described evaporator having a conical bottom so forming the furnace crown together with a sediment reception chamber provided with blow-off plugs and scraper, the whole substantially as and for the purpose herein set forth and as illustrated in the attached drawing.
Specification, 2s. 6d. Drawings on application.

Application No. 2844.—THOMAS ALVA EDISON, of Llewellyn Park, in the County of Essex and State of New Jersey, U.S.A., Inventor, "*An Im-*

proved Method of and Apparatus for Breaking Rock."—Dated 30th January, 1900.

Claims:—

1. The method of breaking rock, consisting in driving a pair of massive rolls at high speed, in periodically delivering charges of rock to said rolls so as to partially arrest the motion thereof, thereby breaking the rock by kinetic energy, and in restoring the speed of the rolls between the intervals of feeding the material thereto, substantially as set forth.

2. The method of breaking rock, consisting in driving a pair of massive rolls at high speed by means of a small power capable of running the rolls up to speed when no work is being done, the power being connected to said rolls by a slipping connection, whereby the speed of the rolls may be reduced without correspondingly reducing the speed of the driving engine, in periodically delivering charges of rock to said rolls so as to partially arrest the motion thereof, thereby breaking the rock by kinetic energy, and in restoring the speed of the rolls during the intervals or between the intervals of feeding, substantially as set forth.

3. An apparatus for breaking rock by kinetic energy, consisting of two massive rolls having roughened or irregular surfaces for catching the rock and subjecting it to a rolling action, an engine for driving said rolls in opposite directions and slipping connections between said engine and the rolls, whereby the speed of said rolls may be reduced in breaking the rock without effecting a corresponding reduction in the speed of the engine, substantially as set forth.

4. An apparatus for breaking rock by kinetic energy, consisting of two massive rolls having roughened or irregular surfaces for catching the rock and subjecting it to a rolling action and provided with projections of greater extent for sledging large pieces of rock and reducing them to a size small enough to be subjected to the rolling action, an engine for driving said rolls in opposite directions, and slipping connections between said engine and the rolls whereby the speed of said rolls may be reduced in breaking the rock without effecting a corresponding reduction in the speed of the engine, substantially as set forth.

Specification, 7s. Drawings on application.

Application No. 2845.—THOMAS ALVA EDISON, of Llewellyn Park, in the County of Essex and State of New Jersey, U.S.A., Inventor, "*Improvements in Elevators and Conveyors*."—Dated 30th January, 1900.

Claims:—

1. An elevator or conveyor of two or more endless wire ropes, a number of clamps secured to said rope and working on the peripheries of smooth-faced driving wheels, and elevator or conveyor buckets or flights carried by some or all of said clamps, substantially as set forth.

2. An elevator or conveyor composed of two or more endless wire ropes, a number of clamps secured to said ropes and working on the peripheries of smooth-faced driving wheels, elevator or conveyor buckets or flights carried by some or all of said clamps and means for tightening said ropes, substantially as set forth.

3. An elevator or conveyor provided with two or more sets of endless wire ropes between which the buckets are supported, a number of clamps secured to said ropes and having convex bearing surfaces, and smooth-faced pulleys over which said ropes run and with the peripheries of which the said clamps engage, substantially as set forth.

4. A scraper and bucket conveyor provided with two or more sets of endless wire ropes, a number of clamps secured to said ropes, smooth-faced pulleys for driving said clamps, and buckets having openings in their bottoms, substantially as set forth.

Specification, 6s. Drawings on application.
