### Complete Specifications.

Patent Office, Perth,  
2nd March, 1900.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been *accepted*, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2849.—HENRY BOWEN HAIGH, of 265 McDonough Street, Brooklyn, U.S.A., President, "*Improvements in Elastic Heels for Shoes*."—Dated 3rd February, 1900.

#### Claims:—

1. A heel for shoes made of leather, provided with a recess in the lower surface of the heel, and a rubber piece fitting in said recess, but not completely filling the same, with the upper surface extending only slightly above the outer surface of the heel, with means for holding said rubber piece in place, substantially as described.
2. A heel for shoes, provided with a recess in the lower surface of the heel, and a rubber piece fitting in said recess, but not completely filling the same, with the upper surface of the rubber extending only slightly above the outer surface of the heel, and a tongue on the rubber piece extending between the top lift and heel for holding the said rubber piece in place, substantially as described.
3. In a heel for shoes, a top lift therefor, made of leather, provided with a slot wider within than at the surface, and a rubber strip fitting in said slot, but not completely filling the same, and means for retaining said strip within the slot, substantially as described.
4. In a heel for shoes made of leather the combination with the heel, of the top lift therefor, provided with a slot having walls flaring inwardly, and a rubber strip fitting in said slot, but not completely filling the same, with the upper surface of the rubber extending only slightly above the outer surface of the top lift, and a tongue on the strip extending between the top lift and the heel for retaining the strip in place, substantially as described.

Specification, 6s. Drawings on application.

Application No. 2850.—WRIGHT'S TAPER-ROLLER BEARINGS SYNDICATE, LIMITED, of London, England (Assignee of WILLIAM HAMILTON WRIGHT)—"*Improvements in or relating to Roller Bearings*."—Dated 3rd February, 1900.

#### Claims:—

1. In a roller bearing securing the tapered rollers upon the interior of a sleeve so that when the latter is removed the rollers come away with it.
2. In a roller bearing the combination with a shaft having tapered bearing-surfaces upon it of a sleeve movable along the shaft without disturbance or adjustment of tapered rollers secured to the interior of the sleeve.

3. In a roller bearing the combination with a sleeve internally tapered of tapered rollers secured upon its interior and an axle carrying a cone which is removable for the purpose described.

4. A roller bearing in which a sleeve having tapered rollers secured upon its interior is combined with a shaft having fixed and removable cones in such a manner that the sleeves can be moved along the shaft without disturbance or adjustment of the rollers carried by the sleeve.

5. In a roller bearing the combination with a sleeve of adjustable removable rings upon its interior serving as retainers for the rollers, substantially as described.

6. In a roller bearing the combination with an end cap of a divided ring such as J opening into a channel therein, for the purpose described.

7. The complete roller bearing, substantially as described and illustrated in the accompanying drawings.

Specifications, 6s. Drawings on application.

Application No. 2851.—FREDERICK WILLIAM BRAUN, of Los Angeles, California, U.S.A., Merchant Chemist (Assignee of ALBERT CHAMPLIN CALKINS), "*An improved Cupel Compressing Machine*."—Dated 5th February, 1900.

#### Claims:—

1. A compressing-machine having a plunger and a lever jointed to the plunger and having two separate fulcrum-bearings, one of which is located in a slotted bearing near the plunger and comes into action during the first part of the stroke to give a powerful compression, and the other of which is located more remote from the plunger and comes into action during the last part of the same stroke of the lever to make a discharge of the object compressed by a continuation of the same stroke of the lever, substantially as described.

2. A compressing-machine, consisting of a rotating disk with cells, an independently-rotating false bottom having a hole through it, and connected with the disk above by a pawl, and a plunger, and plunger-guide, substantially as and for the purpose described.

3. A compressing-machine, consisting of a rotating disk with cells, and independently-rotating false bottom with a hole through it, means for locking the two together and also for turning them, a reciprocating plunger and a shoulder resting beneath and in contact with the disks below the point where the compressing strain is applied, substantially as and for the purpose set forth.

4. The combination with a base having two upright standards, one having a pair of rotating disks with cells as described, and the other a shoulder-rest for the edge of the disks, a frame rigidly connected to the tops of said standards, and having a guide-chamber for a plunger, and a reciprocating plunger working therein, substantially as and for the purpose described.

5. A compressing-machine, comprising a base with two standards D and F, the two rotating disks A and B connected together by a pawl, the frame E connected to the tops of the two standards and having a chamber for the plunger, the links L bar H and link G jointed as described, and the lever I with stops  $i^1$  and  $i^2$  and having a plunger loosely connected thereto, as described.

Specification, 8s. 6d. Drawings on application.

Application No. 2852.—ALEXANDER FORIN, of Nelson, Canada, Medical Doctor, "*An improved Sash Fastener and Holder*."—Dated 9th February, 1900.

#### Claim:—

1. A sash fastener and holder comprising a bearing in the window jamb at a point above the lower sash when it is closed, a pawl rotatably mounted in the bearing and normally engaging said lower sash when the latter is raised, the said pawl being of such length that when turned down or reversed into vertical position its free point will abut against the mid-rail of the lower sash, whereby to fasten such sash in closed position as set forth.

Specification, 4s. Drawings on application.

Application No. 2853.—JOSEPH ROSS, Engineer, and WILLIAM DOUGLAS CAIRNEY, Chartered Accountant, both of Glasgow, Scotland, "*Improvements in Explosives*."—Dated 9th February, 1900.

*Claims:—*

1. Explosives, either in the form of moulds or cartridges, or in a granulated form, and consisting of a mixture of about 87 per cent. of chlorate of potash, 3 per cent. of charcoal, 7 per cent. of paraffin or other suitable wax, and 3 per cent. of vaseline, and all treated in the manner substantially as hereinbefore described.

2. Explosives, either in the form of moulds or cartridges, or in a granulated form and consisting of about 75 per cent. of chlorate of potash, 6 per cent. black oxide of manganese, 6 per cent. of charcoal, 9 per cent. of paraffin or other suitable wax, and 4 per cent. of vaseline, and all treated in the manner substantially as hereinbefore described.

Specification, 3s. 6d.

Application No. 2854.—DARLING'S PATENT AUTOMATIC COUPLING, LIMITED, of Glasgow, Scotland (Assignee of JOHN DARLING and JOHN DARLING, JUNIOR), "*Improvements in automatically Coupling and Uncoupling Railway Carriages, Waggon, and other Vehicles*."—Dated 9th February, 1900.

*Claims:—*

1. The general arrangement, combination, and operation of the parts for automatically coupling railway carriages, waggon, and other vehicles, substantially as described and illustrated on the accompanying sheets of drawings.

2. The arrangement by which the shackles adjust themselves for coupling after the operation of uncoupling has taken place, substantially as described and illustrated, more especially in hard lines in figure 3a of the accompanying drawings.

3. The arrangement by which the shackles are raised to the required level and put out of reach for coupling when desired, substantially as described and illustrated, more especially in dotted lines figure 3a of the accompanying drawings.

4. The use of a spiral spring on the link D to give sufficient resistance to shackle F in operating the catch I on the spring P, substantially as described and illustrated, more especially in figure 5 of the accompanying drawings.

5. The crossbar G carrying the pin J, which, when the catch I is pushed in by the link F of the other carriage, is automatically drawn along so that the pin J engages with the link F of the other carriage, substantially as described and illustrated on the accompanying sheets of drawings.

6. The general arrangement, combination, and operation of the parts for uncoupling railway carriages, waggon, and other vehicles, substantially as described and illustrated on the accompanying sheets of drawings.

Specification, 8s. 6d. Drawings on application.

Application No. 2859.—DAN LICHTENBERG-MADSEN, of 31 Nedergade, Odense, in the Kingdom of Denmark, Printer, "*Improvements relating to the reproduction of Cliches, Stamps, and the like in Cellulose*."—Dated 13th February, 1900.

*Claim:—*

1. The process for the reproduction in cellulose of cliches, stamps, and the like, characterised by the fact that a matrix is stamped with the original in a special kind of cellulose, containing 70 per cent. of nitro-cellulose, 25 per cent. of camphor, and 5 per cent. of resinous oil or the like, whereupon the desired number of stampings are effected in the usual manner in cellulose, containing from 35 to 50 per cent. of camphor.

Specification, 4s.

Application No. 2860.—GEORGE RENWICH ROBERTSON, of Sydney, New South Wales, Engineer, "*An improved Fastening for Hoop Irons, with which bales containing wool and other soft produce are secured*."—Dated 13th February, 1900.

*Claim:—*

1. The fastenings of hoop-irons for securing bales consisting of punching and bending out one or more tongues at one end of the hoop-iron and punching out corresponding apertures at the opposite end of the hoop-iron, into which apertures the tongues may be inserted as specified.

Specifications, 3s. Drawings on application.
