 3. The employment for the working of each sub-division of the complete sub-divided eclipsing screen, combined with a revolving optical apparatus of two or more panels, of a single balanced or unbalanced lever, with or without ball or roller bearings attached to the optical apparatus and revolving with it, each lever carrying one sub-division of the screen at its inner end and having a portion at its outer end that travels along silts in a cylinder or cylinders, fixed to the lautern and adapted along with the specified or some analogous system of locks, worked by the lever itself, to open and close opportunely the sub-division of eclipsing screen.

- 5. The employment of a complete sub-divided eclipsing screen of two or more sub-divisions with or without overlapping borders along with a revolving optical apparatus of two or more panels, each with its corresponding sub-division of screen, along with any suitable eclipsing mechanism not covered by letters patent, for the production of group-flashing lights in lighthouses.
- 6. The employment of a complete sub-divided eclipsing screen of two or more sub-divisions sub-tending unequal horizontal angles at the focus along with a revolving optical apparatus of two or more panels sub-tending corresponding unequal angles, for the production in light-houses of characteristics containing flashes of different colour or duration.
- 7. The employment of complete sub-dividing eclipsing screens of two or more sub-divisions with revolving optical apparatus of two or more panels, for the production of light signals based on the Morse or any analogous code.
