Application No. 2847.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (*Egbert Moore Tingley*), "*Improvements in Electric Brakes*."—Dated 3rd February, 1900.

Claims:—

1. An electric brake, having means such as springs for automatically setting the brake, and a releasing device comprising a plurality of polyphase electro-magnets provided with armatures, which are connected to the brake setting means so as to act in opposition to said means when current is supplied to the electro-magnets.

2. An electric brake for use with a rotary shaft, in which a plurality of non-rotatable friction plates are placed alternately with a plurality of plates rotating with the shaft, and brake setting means such as springs are provided for normally forcing the two sets of plates into braking engagements, such means being connected to the armatures of the releasing electro-magnets, all of which are arranged to act in the same line in opposition to the brake setting means when the magnets are energised.

3. The brake setting and releasing mechanism, constructed and operating substantially as described with reference to the accompanying drawings.

Specification, 5s. Drawings on application.

Application No. 2848.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (*Benjamin Garver Lamme*), "*Improvements in Current Collectors for Electrical Machines*."—Dated 3rd February, 1900.

Claims:—

1. For electrical machines a collector ring comprising an outer contact rim connected by conducting arms to an inner supporting band secured to the machine shaft.

2. The modification in which the inner supporting band is made in two parts connected by radial arms into which a rod or rods is or are screwed for conducting currents towards or away from the ring.

3. For electrical machines collector rings constructed as described with reference to the accompanying drawing.

Specification, 3s. Drawings on application.
