## Complete Specifications.

Patent Office, Perth,  
7th September, 1900.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 3053.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patent Agent (*Norman Wilson Storer*), "*Improvements in Electric Generators and Motors*."—Dated 11th August, 1900.

### Claims:—

1. For an electric generator or motor, an armature having a slotted core with a number of conductors located in each slot and connected in multiple to the commutator bars, those conductors which lie side by side in the slots being connected to the same commutator bar substantially as described.

2. For an electric generator or motor, an armature constructed substantially as described with reference to the accompanying drawings.

Specification, 4s. Drawings on application.

Application No. 3059.—WILLIAM LAWRENCE VOELKER, of 42 Bernard Street, Russell Square, London, England, Electrician, "*Improvements in the Manufacture of Filaments for Incandescing Electric Lamps*."—Dated 20th August, 1900.

### Claims:—

1. The herein described method of producing carbide filaments for electric incandescing lamps consisting in soaking a long fibre of cotton thread or cellular filament in a solution of a readily decomposable salt or salts of the metal or metals intended to form the metallic base of the carbide, drying and spooling the same, packing the spool with powdered carbon and carbide of the kind required in a sealed crucible and subjecting the same to a temperature adapted to convert the salt or salts into oxide or oxides passing the filament thus carbonised through an electric arc whilst surrounded by a cylinder or like envelope composed of the aforesaid metallic base and enclosed within a vessel charged with hydrogen or like gas or with vapour of the metal or metals constituting the aforesaid metallic base substantially as set forth.

2. The modified method of producing carbide filaments for electric incandescing lamps consisting in passing a carbon filament through an electric arc the atmosphere being displaced by hydrogen or like gas or by vapour of the metal or metals intended to form the metallic base of the carbide, and passing the filament, thus converted into graphite through an electric arc whilst surrounded by a cylinder or like envelope composed of the aforesaid metallic base enclosed within a vessel charged with vapour of the metal or metals constituting the metallic base of the carbide to be produced, substantially as set forth.

3. The further modification whereby a carbon filament is treated in the electric arc in the presence of vapour of the metal or metals constituting the metallic base of the carbide to be produced, the said carbon filament being converted into graphite and then into carbide at a single operation, substantially as set forth.

4. In the manufacture of carbide filaments for incandescing electric lamps, the employment of apparatus constructed substantially as herein described and comprising a pair of longitudinally perforated carbon electrodes, a cylinder composed of the metal or metals forming the metallic base of the carbide and arranged about the opposed extremities of the electrodes, an enclosing vessel and means for drawing the filament through the arc.

5. In the manufacture of carbide filaments for incandescing electric lamps, the employment of a crucible formed with a hollow core about which the bobbin under treatment is arranged and through which the heating gases are free to pass, substantially as herein described.

6. For use in an electric lamp a conductor for illuminating by incandescence, composed essentially of uranium carbide or of titanium carbide, and prepared substantially as herein described.

7. For use in an electric lamp a conductor for illuminating by incandescence composed substantially of zirconium carbide or of beryllium carbide.

Specifications, 15s. Drawings on application.

Application No. 3060.—ALEXANDER SPENCER, of 77 Cannon Street, London, England, Engineer, "*Improvements in means for enabling passengers in a Railway Train to Apply the Brakes and attract the attention of the driver and guards*."—Dated 20th August, 1900.

### Claims:—

1. In means for enabling passengers in a railway train to apply the brakes and attract the attention of the driver and guards, the combination and arrangement of parts hereinbefore described with reference to and shown in Figs. 1 to 8 of the accompanying drawings or modified as described with reference to Fig. 13 thereof.

2. Means of the kind specified in Claim 1 modified as hereinbefore described with reference to Figs. 14 and 15 and to Fig. 16 for use with either the vacuum or pressure brake, whichever may for the time being be employed.

3. The device hereinbefore described with reference to and illustrated in Figs. 9 and 10 of the accompanying drawings.

Specification, 9s. Drawings on application.

Application No. 3063.—VICTOR MOTOR COMPANY, LIMITED, of 156 Pitt Street, Sydney, New South Wales, Engineers (Assignee of GUSTAV EX), "*An Incandescent Tube Igniter for Gas Engines*."—Dated 22nd August, 1900.

### Claims:—

1. An automatic tube-igniter for gas engines, consisting of a thimble inserted into the body of the exhaust-valve in such a manner that the open end of the same is in communication with the combustion-chamber, while the closed exterior end projects into the exhaust-chamber, substantially as set forth.

2. An automatic igniter for gas engines, consisting of a flanged thimble provided with an exterior screw-thread adjacent to the flange, and secured by said screw-thread to the exhaust-valve, the open end of said thimble being in communication with the combustion-chamber, while the outer closed end projects into the exhaust-chamber, substantially as set forth.

Specification, 5s. 6d. Drawings on application.
