Complete Specifications.

Patent Office, Perth,
19th October, 1900.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 2994.—CHRISTOPHER BARKER SYMONDS, of Wirksworth, in the County of Derby, England, Solicitor (THOMAS BREAKELL and WILLIAM HOPWOOD), "*Improvements in Vacuum Filters or apparatus for separating liquid from materials and for washing and saturating materials with liquid.*"—Dated 26th April, 1900. (Date claimed under Section 3, "Patent Act Amendment Act, 1894.")

Claims:—

1. In a vacuum filter, or apparatus for separating liquid from materials, and for washing and saturating materials with liquids, a rotatable cylinder, or barrel, having a periphery for carrying the material to be treated, and through which liquid can be drawn, means for withdrawing air and liquid from the interior of the said cylinder or barrel, and means for applying the material to be treated to the said periphery, and for removing it therefrom, substantially as hereinbefore described.

2. In a vacuum filter, or apparatus, for separating liquid from materials, and for washing and saturating materials with liquids, a rotatable cylinder, or barrel, having a perforated periphery covered with a layer, or layers, of permeable material, and carried by a hollow axle having communication, on the one hand, with the interior of the cylinder, or barrel, and, on the other hand, with a suction device and a container for the material to be treated so arranged that the cylinder, or barrel, takes up the material for treatment, and means for removing the material after treatment, substantially as hereinbefore described.

3. In a vacuum filter, or apparatus for separating liquids from materials, and for washing and saturating materials with liquids, a rotatable cylinder or barrel, having a perforated periphery covered with wire gauze, felt (or the like), and a filter cloth (or the like), and carried by a hollow axle, perforated, and provided with an internal pipe or pipes extending to near the internal periphery of the cylinder or barrel, and with a pipe leading to a suction device, and a container for the material to be treated so arranged that the cylinder or barrel takes up the material for treatment, and a counterbalanced scraper in contact with the permeable periphery of the cylinder or barrel, substantially as hereinbefore described.

4. In a vacuum filter, or apparatus for separating liquid from materials, and for washing and saturating materials with liquids, a rotatable cylinder or barrel, having a periphery for carrying the material to be treated and through which liquid can be drawn, means for withdrawing air and liquid from the interior of the said cylinder, or barrel, means for applying the material to be treated to the said periphery, and for removing it therefrom, and means for applying liquid to the material from outside the cylinder, or barrel, substantially as hereinbefore described.

Specification, 9s. 6d. Drawings on application.

Application No. 3114.—GEORGE JAMES KINGSBURY, of Coolgardie, Western Australia, Plumber, "*An appliance for Dividing bulk Butter into parts of any predetermined weight or size.*"—Dated 27th September, 1900.

Claims:—

1. A multiple cutting appliance for horizontally and downwardly dividing butter in the bulk into pats or parts of any predetermined weight or size, substantially as herein set forth, described and as illustrated in figures 1 and 2 of the accompanying drawings.

2. A multiple cutting appliance for horizontally and downwardly dividing butter in the bulk into pats or parts of any predetermined weight or size, substantially as herein set forth and as illustrated in figures 2, 3 and 4, of the accompanying drawings.

Specification, 6s. Drawings on application.

Application No. 3117.—CONRAD FIELD MENDHAM, of South Norwood, London, England, Engineer, "*Improvements relating to the Closing of Sheet-Metal Boxes or Cans, and to Apparatus therefor.*"—Dated 2nd October, 1900.

Claims:—

1. A cap or stopper, made of tin or other sheet metal, for use on vessels containing oils, inflammable or explosive substances, by which the caps and the metal of the vessels are rendered perfectly air-tight by rolling or compressing the touching surfaces together, substantially as herein described and shown.

2. A cap or stopper for tin and other sheet metal vessels as already described, rendered perfectly air-tight by expanding and beading the cylindrical touching surfaces from the inside, as shown in Figures 5 and 6, substantially as described.

3. A cap or stopper for vessels containing oils, paints, explosives, or inflammable substances, which renders the vessels air-tight by metallic contact, without the application of heat or the use of jointing material, substantially as and for the purposes herein described and set forth, and illustrated in the accompanying drawings.

4. A joint made as hereinbefore described with an outwardly projecting head immediately beneath the folded parts.

5. The combination of a die-ring and a roller within the same between which the seam to be operated upon is inserted, one of these parts being capable of a limited lateral movement relatively to the other, means for rotating one of said parts and means for moving the rotary part laterally to cause it to assume a position eccentric to the other part and thus squeeze said seam by exerting a rolling force on the inner surface thereof, substantially as described.

6. The combination of a die-ring, a roller within said die-ring, means for rotating said roller and means for moving said roller laterally, while it is rotating, so as to bring it into a position eccentric to said die-ring, substantially as described.

7. The combination of a die-ring and a roller within the same, between which the seam to be operated upon is inserted, one of these parts being capable of a limited lateral movement relatively to the other, and said roller having a circumferential projection or rib to form an external bead below the joint, means for rotating one of said parts and means for moving the rotary part laterally to cause it to assume a position eccentric to the other part and thus squeeze or expand said seam, substantially as described.

8. The combination, with a stationary casing provided with a circular jaw, of rollers arranged inside the casing, and a revolvable mandril, depressible or working in a fixed bearing, operating to move the said rollers towards the jaw, and to revolve them about their own axes and the axis of the jaw, substantially as set forth.

9. The combination, with a stationary casing provided with a circular jaw of conical rollers pivotally supported inside the said casing, and a revolvable mandril bearing against the conical surfaces of the said rollers, substantially as set forth.

10. The combination, with a stationary casing having a circular jaw, of rollers arranged inside the casing, with projecting beads arranged below the jaw, and a revolvable mandril for forcing outward and revolving the said rollers and their beads, substantially as set forth.

11. The combination, with a stationary casing having a circular jaw, and a collar above the jaw, of rollers provided with heads pivotally supported on the upper edge of the said collar, and a revolvable mandril for forcing outward and revolving the said rollers, substantially as set forth.

12. The combination, with a stationary casing provided with a circular jaw at its lower part, a collar above the jaw, and a cage provided with chases between the said jaw and collar, of rollers journaled loosely in the chases and provided with heads supported on the collar and a revolvable mandril for forcing outward and revolving the said rollers, substantially as set forth.

13. The combination, with a stationary casing having a circular jaw, of rollers pivotally supported inside the casing, a revolvable mandril bearing against the rollers below their fulcrums, and a spring-pressed thumb bearing against the said rollers above their fulcrums, operating to move them away from the jaw when the pressure of the mandril against them is removed, all substantially as and for the purposes herein described and illustrated.

Specification, 14s. Drawings on application.

Application No. 3118.—THOMAS EDWARD WOOD-HAMS NOYES, of 31 O'Connell Street, Sydney, New South Wales, Merchant (assignee of GEORGE WILLIAM GREEN), "*Improvements in Trays, Drawers, and other Egg Frames for Incubators.*"—Dated 2nd October, 1900.

Claims:—

1. In an incubator, a tray or drawer or frame, having as its essential feature a false bottom adapted to be reciprocated beneath confined egg spaces.

2. In an incubator, a tray, drawer, or other egg frame, having stretched across it a false bottom preferably of textile fabric adapted to roll or wind upon rollers at either end substantially as herein described and explained.

3. In an incubator egg-holder the combination with a main frame such as A, having a bottom such as A1, of rollers such as B and C, a false bottom such as D, and a movable secondary frame such as E, having cross pieces such as E1, substantially as herein described and explained and as illustrated in the drawings.

Specifications, 5s. Drawings on application.

Application No. 3119.—JAMES HAY, of Adelaide Road, Wellington, New Zealand, Evangelist, "*An improved Mode of and Appliance for use in Washing Clothes.*"—Dated 2nd October, 1900.

Claims:—

1. The improved mode of washing clothes consisting in the employment of an appliance, such as that herein described, whereby air may be forced through the clothes while they are immersed in water, as specified.

2. An appliance for use in washing clothes consisting of a hollow vessel or chamber that is provided on its under side with a chamber of bottomless divisional spaces and is also provided with a number of air tubes and holes which are in communication with the outer air, substantially as herein described.

3. The combination with an air chamber or vessel, provided on its under side with a number of bottomless divisional spaces, of a number of air tubes, the bottoms of which are flush with the bottom edges of the divisional spaces, and the tops of which open alternately into the air chamber and the outer air (after passing through the chamber), as and for the purposes herein described.

4. The general arrangement, construction, and combination of parts in my appliance for use in washing clothes as herein described, and for the several purposes set forth.

Specification, 6s. Drawings on application.

APPLICATION No. 3120.—ARTHUR WILLIAMS, of 141 and 143 St. George's Road, North Fitzroy, near Melbourne, Victoria, Boot and Shoe Manufacturer, "*Improvements in the Manufacture of Boots and Shoes.*"—Dated 2nd October, 1900.

Claims:—

1. The herein-described method of manufacturing boots and shoes in which the upper having been pulled over the insole is attached thereto by stitches passing through from a channel which is formed in said insole and in which the outer sole is sewn through the upper to the insole between the edge of the insole and the row of stitches by which the upper is sewn to the insole, substantially as and for the purposes specified.

2. A boot or shoe manufactured according to the method described in the preceding claim.

Specifications, 5s. Drawings on applications.

APPLICATION No. 3122.—CHARLES PRITCHARD, Engineer, and HUGH SMITH, Carpenter, both of South Preston, Victoria, "*Improvements in Draught Excluders for Doors.*"—Dated 3rd October, 1900.

Claims:—

1. In a draught excluder for doors the combination as a whole of the parts hereinbefore referred to by the letters A to M, all located and operated substantially as and for the purposes set forth and illustrated.

2. In a draught excluder for doors, the combination with a spring raised draught excluding strip C of the parts hereinbefore referred to by the letters H to M, all located and operated substantially as and for the purposes as set forth and illustrated.

3. In a draught excluder, the combination with a spring raised draught excluding strip C of the parts hereinbefore referred to by the letters J to M, all located and operated substantially as and for the purposes set forth and as illustrated.

Specification, 4s. Drawings on application.

Application No. 3124.—ALFRED GRACE THOMPSON, of Bay Street, North Brighton, Victoria, Saddler, "*Improvements in Harness Saddles.*"—Dated 3rd October, 1900.

Claims:—

1. The improvements in harness saddles, consisting of a metallic saddle-tree cast or stamped all in one piece, having through an integral flange holes for the passage of the terret screws and the bolt or screw for the check rein hook, and an integral tongue protruding from the lower end of each leg to engage bridges in the upper lining of the pad, all as and for the purposes hereinbefore described and illustrated in the drawings.

2. The improvements in harness saddles, consisting of a removable pad or cushion fitting between roles on each side of the flaps, and having nuts to hold terret screws rivetted to the upper lining of the pad, and bridge pieces cut in the said lining to receive tongues on the bottom of the saddle tree legs, and at the lower end of each side of the lining a metallic extension piece to fit into a catch on the inside of the flap or cover all as and for the purposes hereinbefore described and as illustrated in the drawings.

3. Improvements in harness saddles, consisting of a metallic saddle tree cast or stamped all in one piece having through an integral flange holes for the passage of the terret screws and the bolt or screw for the check rein hook, and an integral tongue protruding from the lower end of each leg to engage a bridge in the upper lining of the pad, in combination with a removable pad or cushion fitting between depending rolls extending each side of the flaps and having nuts to hold terret screws rivetted to the upper lining of the pad, and bridge pieces cut in the said lining to receive tongues on the bottom of the saddle tree legs, and at the lower end of each side of the lining a metallic extension piece to fit into a catch on the inside of the cover, all as and for the purposes hereinbefore described and as illustrated in the drawings.

Specification, 6s, 6d. Drawings on application.
