Claims.—

1. In the construction of apparatus for heating incubators the arrangement of a plunger *c* with tube or casing *a* and a stop loop *c* connected with a movable burner in combination with a lamp or flame substantially as hereinbefore described and explained and as shown in the accompanying drawings.

2. In the construction of incubators a grooved or corrugated conduit *f* in combination with a flame substantially as hereinbefore described and explained and as shown in the accompanying drawings.

Specifications, 3s. 6d. Drawings on application.

Application No. 3205.—**EDWARD WATERS, JUD.**, a member of the firm of Edward Waters & Son, of No. 131 William Street, Melbourne, Victoria, Patent Agent (*Frank Lemont Dodgson*), "*Improvements in Railway Switches and Semaphore Apparatus.*"—Dated 20th November, 1900.

The claims, numbering 61, can be inspected at the Patent Office.
Specifications, 43 2s. 6d. Drawings on application.

Application No. 3211.—**THOMAS DANIELLS MERTON**, of Spottiswoode, near Melbourne, Victoria, Metallurgist, "*An Improved Ore-roasting Furnace.*"—Dated 4th December, 1900.

Claims.—

1. The herein described ore-roasting furnace, consisting essentially of a series of hearths arranged one above the other, each provided with horizontally rotating rabbling arms and with discharge openings at alternate ends of said hearths in combination with a rest chamber (as E), and a revolving finishing cylinder (as G), substantially as and for the purpose specified.

2. In an ore-roasting furnace, a series of horizontal hearths arranged one above the other and each discharging into the one below in combination with a revolving finishing cylinder, substantially as and for the purpose specified.

3. In an ore-roasting furnace, rabbling arms projecting from fixed arms mounted upon rotating spindles and having upwardly projecting notched lugs adapted to be engaged by stays extending from said rabbling arms, substantially as and for the purposes specified.

4. In an ore-roasting furnace a revolving finishing cylinder (as G) having air inlet ports or openings around one end and means for automatically closing them when at the top and opening them when at the bottom as the cylinder revolves substantially as and for the purposes specified.

Specifications, 6s. Drawings on application.

Application No. 3215.—**MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED**, of 18 Finch Lane, Threadneedle Street, London, England (Assignee of **GUGLIELMO MARCONI**), "*Improvements in Apparatus for Wireless Telegraphy.*"
Dated 4th December, 1900.

Claims.—

1. A transmitter for electric wave telegraphy consisting of a spark producer having its terminals connected through a condenser with one circuit of a transformer the other circuit being connected to a conductor and to a capacity.

2. In a transmitter for electric wave telegraphy the combination of a transformer one circuit of which is a persistent oscillator and the other a good radiator and means for setting up oscillations in the oscillator.

3. A transmitter for electric wave telegraphy consisting of a spark producer having its terminals connected through a condenser with one circuit of a transformer the other circuit being connected to a conductor and to earth the time period of electrical oscillations in the two circuits being the same or octaves of each other.

4. In a transmitter for electric wave telegraphy, the combination of a transformer one circuit of which is a persistent oscillator and the other a good radiator the time period of electrical oscillations in the two circuits being the same or octaves of each other and means for setting up oscillations in the oscillator.

5. A system of electric wave telegraphy in which both the transmitter and the receiver contain a transformer the time period of electrical oscillations in the four circuits of the two transformers being the same or octaves of each other.

6. A system of electrical wave telegraphy, in which both the transmitter and the receiver contain a transformer, one circuit of which is a persistent oscillator and the other a good radiator or absorber of electrical oscillations, all four circuits having the same time period or being octaves of each other.

7. In a transmitter for electric wave telegraphy, the combination of a pair of terminals, means for producing sparks between the terminals, a transformer, connections between one winding of the transformer and the terminals, a condenser in one of the connections, a conductor, a capacity and connections between the other winding of the transformer and the conductor and capacity.

8. Apparatus for wireless telegraphy substantially as described and illustrated in the drawings.

Specifications, 16s. Drawings on application.

Application No. 3219.—**JOSEPH SAMUEL BEEMAN**, Engineer, of 182 Earl's Court Road, London, England, "*Improvements in or relating to Automatic Feed Apparatus.*"—Dated 6th December, 1900.

Claims.—

1. In automatic feed apparatus the combination of a support for the article, means for causing the article to protrude too far through the support and means for altering thereafter with precision the relative position of the article and support so that the protruded portion is reduced to a definite length.

2. In automatic feed apparatus the combination of a support for the article, a plunger operating to protrude the article too far through the support, means for reciprocating the plunger, a movable stop for partially returning the article, and means for bringing the stop into a definite position relatively to the support and for withdrawing it from that position substantially as described.

3. In automatic feed apparatus the combination of a support for the article, a plunger for causing the article to enter and protrude too far through the support, means for reciprocating the plunger, a pivoted stop-lever operating to partially return the article, a bell-crank lever operatively connected to the pivoted stop-lever, a cam capable of rotation and operating upon the bell-crank lever, adjustable means for limiting the motion of the pivoted stop-lever and a spring controlling such lever substantially as described.

4. In automatic feed apparatus the combination of a support for the article, a plunger for causing the article to enter and protrude too far through the support, means for reciprocating the plunger, a pivoted stop-lever operating to partially return the article, a bell-crank lever, a yielding connection between the pivoted stop-lever and the bell-crank lever, a cam capable of rotation and operating upon the bell-crank lever, adjustable means for limiting the motion of the pivoted stop-lever, and a spring controlling such lever, substantially as described.

5. The automatic feed apparatus substantially as described or illustrated in Figure 1 or Figure 2 of accompanying drawings.

Specifications, 5s. 6d. Drawings on application.

Application No. 3221.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patent Agent (*William Andrew Bole*), "*Improvements in Gasifiers for Internal Combustion Engines.*"—Dated 6th December, 1900.

Claims:—

1. In a gasoline saturation plant, a saturating chamber the flow of air through which is only restricted by the requirements of the engine to which it is supplied after saturation and having a continuous supply of gasoline the unused portion of which escapes at the bottom of the chamber, with means for maintaining the desired temperature in the interior of the chamber, substantially as described.

2. The means for regulating the flow of water supplied to the jacket of a gasoline saturating chamber in accordance with the temperature of the chamber, substantially as described with reference to the accompanying drawings.

3. In a gasoline saturation plant, a saturating chamber constructed substantially as described with reference to the accompanying drawings.

4. A gasoline saturating chamber having a water jacket connected by pipes with the water jacket of an internal combustion engine cylinder and with or without thermostatic means for regulating the flow of water round the water jacket of the saturating chamber in accordance with the temperature thereof, substantially as described.

5. The combination of an internal combustion engine and a gasoline saturation plant constructed and operating substantially as described with reference to the accompanying drawings.

Specification 5s. Drawings on application.

Application No. 3225.—RICHARD FREDERICK BRADSHAW and WILLIAM EDWARD HARDING, both of Boulder, Western Australia, Engineer and Engine Driver respectively, "*The 'Bradshaw-Harding' High Pressure Tap for Filter Presses and other purposes.*"—Dated 11th December, 1900.

Claims:—

1. The herein described high pressure tap consisting of the various parts constructed, arranged, and operating substantially as and for the purposes herein described and explained, and as illustrated in the accompanying drawings.

2. In a tap, as herein described, the use of a plug as C, having a vent as C', and working within a cylinder as A, and provided with a resistant cushioned end or seal joint as D, substantially as herein set forth and as illustrated in the accompanying drawings.

3. In a tap, as herein described, the operative means consisting of a locking cam as F and F', and arranged with a fixed pivot as E' and a movable pivot as G', and carried by links as B', trunnioned as at B' and worked by a handle as G, substantially as herein set forth and as illustrated in the accompanying drawings.

Specifications, 3s. 6d. Drawings on application.
