Complete Specifications.

Patent Office, Perth,
18th January, 1901.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the Complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 3212.—JOHN COLLINS CLANCY, Analytical Chemist and Metallurgist, and LUKE WAGSTAFF MARSLAND, Solicitor, both of Martin Place, Sydney, New South Wales, "*An improved process for the Elimination of Zinc from sulphide ores, and the extraction and recovery of lead, silver, gold, and other metals therefrom, and from other sulphide ores.*"—Dated 4th December, 1900.

Claims:—

1. Our hereinbefore-described process for the elimination of zinc and the recovery of lead, silver, or other metals from sulphide ores, consisting essentially in the following step by step operations:—(a) Roasting the pulverised ore with the addition of lead sulphate (1) at such degree of heat as will not volatilise the lead contained in the ore or the added lead sulphate, or (2) at or above such temperature with the further addition of calcium oxide or lime; (b) Transferring the roasted ore whilst still very hot immediately from the roasting furnace into a vat containing a solution of sulphuric acid and water and thereby causing the solution to become heated to boiling point or thereabouts; (c) Agitating the whole mixture in the said vat during the process of churning, lixiviating, extracting, and dissolving of the zinc in the same; (d) Recovering lead oxide by concentration from the ore and solution whilst undergoing treatment in the said solution; (e) Converting the lead oxide so recovered into lead sulphate to be used for adding to succeeding charges of ore to be roasted in the furnace; (f) Conducting the residual ore and solution into a settling vat and separating the solution from the ore by drawing off the solution into a separate vat; (g) Extracting the zinc from the solution so separated by electrolysis the same and recovering from the said solution the sulphuric acid therein contained for use in treating succeeding charges of roasted ore; and (h) Recovering the lead, silver, and other metals contained in the residual ore by smelting the same in any suitable smelting furnace; all substantially as and for the purposes hereinbefore set forth.

2. In extracting metals from sulphide ores roasting pulverised ores with the addition or admixture of lead sulphate thereto either before or during roasting in quantity proportional to the quantity of zinc or metallic sulphide the ore contains substantially as herein described and explained.

3. In extracting metals from sulphide ores heating a solution of sulphuric acid for dissolving or extracting the zinc to a temperature of 100° C. or thereabouts by transferring heated roasted ore from the furnace into a vat containing such solution substantially as herein described and explained.

4. In extracting metals from sulphide ores separating by means of concentrating tables or other concentrating apparatus whilst under treatment with sulphuric acid solution during or simultaneously with the elimination of the zinc the whole or part of the lead oxide which is produced in the roasting of the ore substantially as herein described and explained.

Specification, 12s. Drawings on application.

Application No. 3217.—FRANCIS JAMES ODLING, of No. 3 Queen's Mansions, Beaconsfield Parade, St. Kilda, in the Colony of Victoria, Mining Engineer, and WILLIAM JAMIESON, of Broken Hill Chambers, 31 Queen Street, Melbourne, Victoria, Gentleman, "*An improved Apparatus for the Separation of the Magnetically Attractible Mineral or Particles from Pulverised Ores.*"—Dated 5th December, 1900.

Claims:—

1. In an apparatus for the purpose specified, the combination of a circular stationary electro-magnet, as M¹-M² having poles as m¹, a gun metal rotating shield as S, and a table as A having a gyratory motion given it, said table being provided with pockets as A³ each, formed with an upwardly projecting edge rib as a² and the U shaped gap ribs a¹ connecting with end parts of pocket ribs and by aid of which ribs the attracted mineral and capillary attraction a bead or web of water is maintained between table and shield when the ore is fed in a wet state substantially as herein described.

2. In an apparatus for the purpose specified a rotating shield as S, having its operative surface of a conical section and arranged under an electro-magnet M¹-M², as in Fig. 6, or of a straight section and arranged under an electro-magnet M¹-M², as in Fig. 4, and combined with a table such as A substantially as and for the purpose herein described.

3. In an apparatus for the purpose specified a table as A having an annular enclosed chamber as J formed on its periphery and the ports as J¹ and pipes as J² leading inwards radially therefrom combined with a shield as S and with an electro-magnet as M¹-M² the poles of which may be cut away at one or more positions in its circumference substantially as described and illustrated.

4. In an apparatus for the purpose specified the combination of the annular rotatable feed launder as B² and its feed pipes as marked B and B¹, with a table as A having a downwardly inclined annular working surface, a succession of pockets as A³, gaps as a³, U shaped figures as a¹ and the discharge pipes A⁴ and A⁵, and said table having a gyratory motion imparted to it, all assembled and arranged substantially as described and illustrated.

5. In an apparatus for the purpose specified a suitably supported screw rod as F adapted to finally adjust the gyratory motion of table substantially as described and illustrated.

6. In an apparatus for the purpose specified the combination of the spherical headed adjusting screw-rod F⁷, bed plate G, the supports E, C² C³ C⁴ and C⁵ and the table A-A¹ all substantially as herein described and illustrated in the drawings.

7. The improved apparatus for the purpose specified having the several improvements hereinbefore claimed combined, arranged and assembled in it substantially as herein described and illustrated in the drawings.

Specifications, 12s. Drawings on application.

Application No. 3223.—W. D. and H. O. WILLS, LIMITED, of Ashton Gate, Bristol, England, Manufacturers of Tobacco, Cigarettes, Cigars, and Snuff (assignee of HENRY RANKIN and HENRY HERBERT WILLS), "*Apparatus for Filling Cases with Cigarettes.*"—Dated 11th December, 1900.

Claims:—

1. In a machine for filling cases with cigarettes the combination with a hopper for the reception of the cigarettes to be inserted in the cases, of a partitioned receptacle into which the cigarettes pass from the hopper, means for agitating the cigarettes in the hopper to insure the proper distribution of the cigarettes into the partitioned receptacle; an opening in the lower part of one side of the partitioned receptacle through which a plunger can pass, to press upon the lowermost row, or rows, of cigarettes in the said receptacle; a plunger, or slide, and means for operating it, to force the cigarettes from the partitioned receptacle; an opening in the side of the said receptacle opposite that at which the plunger, or slide, enters and through which said opening the lowermost row, or rows, of cigarettes are forced from the said receptacle; flexible plates forming a hollow truncated pyramid arranged in the path of the cigarettes as they leave the receptacle, and so that the smaller end of the pyramid will enter the open end of a case when moved into a position to receive cigarettes; a magazine for containing the cases to be filled with cigarettes, and means for withdrawing a case from the magazine into position to receive the cigarettes and retain the said case in position while being filled, substantially as hereinbefore described.

2. In a machine for filling cases with cigarettes—the combination with a hopper, or receptacle, into which the cigarettes to be inserted in the cases are fed, the said hopper, or receptacle, consisting of two rigid sides, connected together with two flexible sides, or ends, attached at their lower ends to a frame capable of being reciprocated; and means for reciprocating the said frame, so as to cause the flexible sides, or ends, to be alternately loose and taut and thereby cause the cigarettes in the hopper to be agitated; substantially as, and for the purpose hereinbefore described.

3. In a machine for filling cases with cigarettes, the combination with a partitioned receptacle for the cigarettes to be inserted in the cases, of a plunger and means for operating it for forcing the cigarettes from the partitioned receptacle into the cases, the said plunger being composed of parts capable of receiving independent movement; means for coupling the parts so as to cause them all to move together; and means for arresting the movement of one, or more, of the parts while the other part, or parts, continues, or continue, to move; substantially as, and for the purpose hereinbefore described.

4. In a machine for filling cases with cigarettes the combination with a chamber into which the cigarettes to be inserted are fed; of vertical division plates in the chamber extending from the top thereof to a distance from the bottom sufficient to admit of the passage beneath them of two superposed rows of cigarettes; and plates capable of being adjusted in position so as to contract the spaces when required to admit of the passage of only one row of cigarettes; substantially as hereinbefore described.

5. In a machine of the character hereinbefore described for filling cases with cigarettes, the combination with the main hopper into which the cigarettes to be inserted in the cases are fed; and a supplementary hopper into which the cigarettes pass from the main hopper of means for agitating the cigarettes by knocking, or moving the sides, or a side, of the main hopper to prevent the cigarettes from arching, or jamming, in the said main hopper, substantially as hereinbefore described.

6. In a machine for filling cases with cigarettes, the combination with a frame or chamber into which the cigarettes are fed, of a plunger and means for operating it to force cigarettes from the said frame or chamber, cases for receiving the cigarettes forced from the said frame, or chamber, by the plunger; means for bringing the cases into position to receive the cigarettes as they are forced from the said frame, or chamber, by the plunger, a sliding, or hinged, plate, or sliding, or hinged, plates, on one side, or on opposite sides, of the said frame, or chamber; and means for operating the said plate or plates, so as to cause it, or them to press together the cigarettes to within range of the action of the plunger and facilitate their entrance into the cases; substantially as hereinbefore described.

7. In a machine for filling cases with cigarettes the combination of a frame, or chambers, into which the cigarettes are fed; a plunger and means for operating it so as to force the cigarettes from the said frame, or chamber; a sliding, or hinged, plate, or sliding, or hinged, plates, arranged on one side, or on opposite sides, of the chamber; a cam, or cams, operated so as to act on the said plate or plates, and cause it or them to press together the cigarettes to within range of the action of the plunger; substantially as hereinbefore described.

8. The combination of parts constituting the machine for filling cases with cigarettes substantially as hereinbefore described and illustrated by the accompanying drawings under various modifications.

Specifications, £1 10s. Drawings on application.

Application No. 3226. — WILLIAM NEPEAN HUTCHISON, Commercial Traveller, of Sydney; HENRY SCOTT HARDEN, Solicitor, of Sydney, and HUGH COLLEY, Dairy Farmer, of Kiama, all in the Colony of New South Wales, "*An Improved Garbage and Night-soil Cart.*"—Dated 11th December, 1900.

Claims:—

1. A garbage cart, the body of which is in the form of a box with an inclined bottom sloping towards the rear, such body being provided with one or two filling doors, and with an emptying door, all such doors being hermetically sealed and clamped, as herein specified.

2. A garbage cart, the body of which is such as that herein described, in combination with an internal rose and with a super-imposed tank charged with disinfectant and with valves and connections for the admission of the disinfectant, and for water also in combination with the rose, as herein set forth.

3. A garbage cart, the body of which is in the form of a box, with an inclined bottom, such body being provided with hermetically sealed door entrances and an exit, the exit being controlled by a suitable lever apparatus and connections in combination with an internal rose that is connected with a disinfectant tank and with means for admitting a supply of water to the rose and with a box seat which may be made hollow so as to contain spare buckets as may be required as herein set forth.

4. The general arrangement, construction and combination of parts in the improved garbage and night soil cart as herein described, as illustrated in the drawings and for the purposes specified.

Specification, 4s. Drawings on application.

Application No. 3227.—ARTHUR HENRY BENNETT, of 44 Swan Street, Richmond, in the Colony of Victoria, Gasfitter, and STEPHEN JONES, of 51 Athol Street, Moonee Ponds, in the Colony of Victoria, Gasfitter, "*A system of automatically Lighting Gas Burners and Novel Apparatus for use therein.*"—Dated 11th December, 1900.

Claims:—

1. A system of gas lighting comprising a supply cock provided with an adjustable by-pass, one feed pipe leading from such cock to a number of burners, each burner being provided with a valve to control the gas supply to its burner, and a valve to control the gas supply to a pilot ignition tube and the whole being so arranged that when the gas burners are ignited the pilot lights are extinguished, or that when the pilot lights are burning the burners are extinguished, the whole system being so governed that by turning on the said main supply cock, the whole of the burners will automatically light themselves, and the corresponding pilot lights be automatically extinguished, or alternatively by turning off the cock all the burners will be automatically extinguished, and the corresponding pilot lights be lighted and remain so lighted until the said supply cock be again operated.

2. A system of gas lighting comprising a cock in the gas supply pipe (said cock being provided with a by-pass) means for automatically controlling the gas passage to the burner and means for automatically controlling the gas passage to the pilot tube, so that the gas is supplied to the burner only when cock is turned on, and to the pilot tube only when cock is turned off, substantially as and for the purposes described.

3. In combination, a cylinder 8 to be secured to gas fittings, the top of which forms seating for a valve, a chamber above same having means for carrying burner, a valve in the chamber, a branch pipe from the cylinder, a pipe section and pipe communicating with branch pipe, a valve in the pipe, a valve seating on top of pipe section, and top of pipe, and a by-pass from pipe section beneath the valve to pipe above the valve, substantially as and for the purposes described.

4. In combination, a cylinder 8 to be secured to gas fittings, the top of which forms a seating for a valve, a shouldered tube as 14 fitting on to same and forming a chamber and having means for carrying a burner, a ball valve as 11 in the chamber and means for guiding valve in its movements, a branch pipe as 21 from the cylinder, a pipe section as 22 entering same and the top of which forms valve seat, a tube as 25 screwed on to the pipe section and having valve seat at top and carrying pilot tube, a valve as 23 with conical top, a casing as 28 to pipe as 25, an opening as 24 in the pipe section as 22, openings as 26 and 29 in the pipe 25, and means for regulating opening 24, substantially as and for the purposes described.

5. In combination, cylinder as 8 the top of which forms a seating for a valve, a wire gauze strip at base of cylinder, and means for securing cylinder to gas fittings, a shouldered tube as 14 fitting on to the cylinder forming a valve chamber and having a neck internally and externally screw threaded, a ball valve in the chamber having incisions at top and mounted on rod set in a guide frame, a branch pipe as 21 from the cylinder, a pipe section as 22 entering same with top forming valve seat, a pipe as 25 carrying pilot tube as 34 fitting on to the pipe section and having conical top forming valve seat, a pipe casing as 28, a valve as 23 within the pipe 25, an opening 24 in the pipe section, an opening 26 in the pipe 25 in line with same, and an opening 29 in the pipe 25 near its top, an adjusting screw 30 to regulate the opening 24, and an adjusting screw 32 to regulate the opening from branch pipe 21 to pipe section 22, substantially as and for the purposes described.

6. In a system of gas lighting after the manner herein-described, a cock having by-pass pipe for the maintenance of pilot burners with means of regulating the gas flow in the said pipe, substantially as and for the purposes described.

7. In the herein-described system of gas lighting in combination, a cock having by-pass pipe 3, a box 4 which communicates with cock and receives one end of pipe 3, and adjusting screw tap 5 to regulate the passage from box 4 to by-pass 3, substantially as and for the purposes described.

8. The general combination and arrangement of the several parts forming a complete system of automatic gas lighting and apparatus therefor, substantially as illustrated on the accompanying drawings.

Specification, 13s. Drawings on application.
