Application No. 3191.—Mephan Ferguson, of the Olderfleet, Collins Street, Melbourne, in the State of Victoria, Engineer, "An improved Axle for Jinkers and other heavy-wheeled vehicles."-Dated 13th November, 1900.

My improved axle for jinkers and other heavy-wheeled vehicles, having the arms (upon which the wheels rotate) made separately from the main body and temporarily connected thereto by means of cotters or other equivalent contrivances so that in the event of a breakage said arms may be readily removed and new ones substituted therefor, substantially as herein described and explained and as illustrated in the drawings

Specification, 3s. Drawings on application.

Application No. 3311.—James Tait Williams, of 65 Gover Street, North Adelaide, South Australia, Electrician, "Improvements in Mechanism for Sounding Bells."—Dated 19th February, 1901.

Claims :-

- 1. In mechanism for sounding bells consisting essentially of a series of keys arranged in such manner that as each key is depressed an electric circuit is closed operating an electro-magnet, having a hinged armature upon which is mounted a swinging lever carrying a hammer adapted to strike a bell, providing each key with variable resistance coils in such manner that various modifications of tone may be obtained.
- tained.

 2. Mechanism for sounding bells consisting essentially of a series of keys arranged in such manner that as each key is depressed an electric circuit is closed operating an electro-magnet having a hinged awmature, upon which is mounted a swinging lever carrying a hammer adapted to strike a bell, such lever being adapted to engage a projecting arm of a further lever carrying a damper engaging the bell in such manner that on the forward movement of the striking lever said damper is removed, and replaced on the backward movement thereof, substantially as described and illustrated.

 3. The herein described mechanism for counding hells (such as P)
- scribed and illustrated.

 3. The herein described mechanism for sounding bells (such as B), consisting essentially of swinging levers (such as D) carrying hammers (such as C), mounted upon hinged armatures (such as B) of electromagnets (such as E), and levers (such as K), carrying dampers (such as J), adapted to engage the bells, the whole being arranged in such manner that on depressing one key (such as G), of a series of keys, an electric circuit is closed which operates an electro-magnet and causes a hammer to strike a bell and removes the damper, and on the key being released the hammer swings back and allows the damper to again engage the bell, each key being provided with variable resistance coils whereby modifications of tone may be obtained, substantially as described.

 Specification 6s Dawning and Miller (M) and M).

Specification, 6s. Drawings on application.

Application No. 3312.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (Benjamin Garver Lamme), "Improve-ments in Systems of Electrical Distribution."— Dated 22nd February, 1901.

Claim:

A system of alternating current distribution in which an alternating current circuit and a direct current circuit respectively supplying

energy to translating devices are interconnected through a rotary transformer, the field magnet of which is excited by a direct current machine which is either driven by an alternating current motor energised from the alternating current circuit or is mechanically coupled to the shaft of the rotary transformer.

Specification, 2s. 6d. Drawings on application.

Application No. 3313.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (Benjamin Garver Lamme), "Improve-ments in Systems of Electrical Distribution."— Dated 22nd February, 1901.

- 1. In a system of electrical distribution of the kind described, a protective device for each rotary converter which holds the direct current circuit leading therefrom closed so long as the shunt field current of such converter does not fall below a predetermined safety limit, but which opens such circuit when the shunt field current is reduced below the safety limit or when the shunt circuit is opened for the purpose succified.
- 2. In a system of electrical distribution in which translating devices are supplied with direct currents through rotary converters from a source of alternating current, a circuit breaker for each converter, the energising of the locking coil of the breaker being controlled by the field magnet current of the converter for the purpose specified.

 3. A system of electrical distribution arranged substantially as described and shown in the accompanying drawing.

Specification, 4s. 6d. Drawings on application

Application No. 3314.—CHARLES GABRIEL SUDRE, Mining Engineer, of 12 Boulevard St. Marcel, and Charles Victor Thierry, Consulting Engineer, of 11 Rue Meynadier, both in Paris, France, "Improvements in the Treatment of Oxides of Metals or Metalloids, or compounds of same, for obtaining new products therefrom."—Dated 22nd February, 1901.

- 1. As a new article of manufacture an amorphous, vitreous, and homogeneous material obtained from such of the oxides of metals, or metalloids, or compounds of same as are refractory below the fusing point of pure alumina, substantially as described.
- 2. As a new article of manufacture an amorphous, vitreous, and homogeneous material obtained from such of the oxides of metals or metalloids or compounds of same as are refractory below the fusing point of pure alumina when same have been melted by radiant heat and resolidified.
- 3. As a new article of manufacture, an amorphous, vitreous, and homogeneous material obtained from such of the oxides of metals, or metalloids or compounds of same as are refractory below the fusing point of pure alumina when same have been melted by radiant heat, suddenly cooled and subsequently reheated.

- point of pure alumina when same have been melted by radiant heat, suddenly cooled and subsequently reheated.

 4. The process of producing an amorphous, vitreous, and homogeneous material which consists in subjecting the oxides of metals, or metalloids or compounds of same which are refractory below the fusing point of pure alumina directly to radiant heat in a vacuum or neutral atmosphere and after fusing subsequently cooling with sufficient rapidity to prevent crystallisation substantially as described.

 5. The process of producing an amorphous, vitreous, and homogeneous material which consists in subjecting the oxides of metals or metalloids, or compounds of same which are refractory between the fusing point of pure alumina directly to the radiant heat of an electric, ric, in a vacuum or neutral atmosphere, the electrodes being out of contact with the material and the layer of material being of such a thickness as to prevent the heat radiated passing therethrough and after such fusing subsequently cooling with sufficient rapidity to prevent recrystallisation substantially as described.

 6. The process of producing an amorphous, vitreous, and homogeneous material which consists in subjecting the oxides of metals or metalloids, or compounds of same which are refractory below the fusing point of pure alumina, to a preliminary heating, in then subjecting them directly to the radiant heat of an electric arc in a vacuum or neutral atmosphere, the electrodes being out of contact with the material and the layer of material being of such a thickness as to prevent the heat radiated passing therethrough, and after such fusing subsequently cooling and then reheating substantially as described.

 Specification, 18s. Drawings on application.
