Complete Specifications.

Patent Office, Perth,
12th July, 1901.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 3403.—EDWARD WATERS, jun., of 131 William Street, Melbourne, Victoria, Patent Agent (*The Linotype Company, Limited*), "*Improvements in Linotype Machines for making improved displayed advertisement linotypes and repeat linotypes, and in the said displayed advertisement linotypes.*"—Dated 24th May, 1901.

Claims:—

1. The improved matrices from which can be cast pairs of displayed advertisement linotypes and adapted to be composed together and introduced together into the elevator head as a complete line.
2. The hereinbefore described matrices having the formative cavities for overhanging capitals and the other characters distributed amongst them, one cavity to each matrix, the said cavities being aligned on their respective matrices and adapted to ensure perfect register between the two linotypes of the pair cast from a composed line of them.
3. The hereinbefore described combination of elevator head; vice stop; and stop adapted to be moved out of action and into action again to respectively permit and to shorten the normal descent of the said head to the said vice stop.
4. The hereinbefore described combination of elevator head; stop; rod adapted to be slid to and fro through its bearings to put the stop alternately out of or into action; and means for allowing the said stop to swing freely upon the said rod but preventing it moving lengthwise thereof.
5. The hereinbefore described combination of elevator head; stop; rod adapted to be slid to and fro through its bearings to put the stop alternately out of and into action; means for allowing the said stop to swing freely upon the said rod but preventing it moving lengthwise thereon; and automatic means for returning the stop from its working to its normal condition.
6. The hereinbefore described combination of elevator head; stop; rod adapted to be slid to and fro through its bearings to put the stop alternately out of and into action; means for allowing the said stop to swing freely upon the said rod but preventing it moving lengthwise thereon; and an automatic latch to lock the stop in its working position.
7. The hereinbefore described combination of elevator head; stop; rod adapted to be slid to and fro through its bearings to put the stop alternately out of and into action; means for allowing the said stop to swing freely upon the said rod but preventing it moving lengthwise thereon; an automatic latch to lock the stop in its working position; and an automatic latch trip.

8. The hereinbefore described combination of reciprocating member of the machine; grabber shaft; arm thereon adapted by the forward motion of the said member to alternately lock the grabber out of action and to unlock it; connection between the said member and arm to make the latter partake the forward and backward motions of the former; starting bar and means by which it likewise partakes the forward motion of the said reciprocating member; and automatic device for returning the said bar into its backward position.

9. The hereinbefore described combination of reciprocating member of the machine, grabber shaft; arm thereon to lock the grabber out of action and to unlock it; connection between the said member and arm to make the latter partake the forward and backward motions of the former; starting bar; automatic device to lock the starting bar in its forward position; vertically reciprocating elevator head; and rod in constant contact with the said automatic device and projecting into the path of the elevator head to unlock the starting bar as the said head descends.

10. The hereinbefore described combination of reciprocating member of the machine; grabber shaft; arms thereon to lock the grabber out of action and to unlock it; connection between the said member and arm to make the latter partake the forward and backward motions of the former; starting bar; automatic device to lock the starting bar in its forward position; vertically reciprocating elevator head; and rod in constant contact with the said automatic device and projecting into the path of the elevator head to unlock the starting bar, as the said head descends, the said rod having the end which projects into the path of the descending elevator head detachable therefrom.

11. The hereinbefore described combination of elevator head, automatic means actuated by a reciprocating member of the machine to lock back the grabber; and automatic means actuated by the descending elevator head to unlock the said grabber.

12. The hereinbefore described combination of elevator head; automatic means actuated by a reciprocating member of the machine to lock back the grabber; automatic means actuated by a descending elevator head, to unlock the said grabber; and means for putting the last-mentioned means out of action.

13. The hereinbefore described combination of elevator head; stop therein adapted to be moved out of action and into action again to respectively permit and to shorten the normal descent of the said head; automatic means actuated by a reciprocating member of the machine to lock back the grabber; and automatic means actuated by the descending elevator head to unlock the said grabber.

14. The hereinbefore described combination of elevator head; stop therein adapted to be moved out of action and into action again to respectively permit and to shorten the normal descent of the said head; automatic means actuated by a reciprocating member of the machine to lock back the grabber; automatic means actuated by the descending elevator head to unlock the said grabber; and means for putting the last-mentioned means out of action.

15. The hereinbefore described combination of elevator head; stop therein adapted to be moved out of action and into action again to respectively permit and to shorten the normal descent of the said head; automatic means actuated by a reciprocating member of the machine to lock back the grabber; automatic means actuated by the descending elevator head to unlock the said grabber; and a trip for the latch of the said stop capable of being put either into or out of the path of the latch.

16. A pair of improved displayed advertisement linotypes, one having the overhanging capitals and the other having the supports for the overhangs thereof and the rest of the type, the supports and the overhangs registering correctly with each other.

Specification, £1 7s. Drawings on application.

Application No. 3404.—HENRY CLAY BULL, of 15 West Square, Lambeth, London, England, Engineer, and ARTHUR WATLING, of 59 and 60 Chancery Lane, London, England, Land Agent, "*Improvements in the Extraction of Gold from Sea Water.*"—Dated 24th May, 1901.

Claims:—

1. The method of extracting gold from sea water consisting in adding to and mixing with the sea water to be treated a quantity of lime sufficient to precipitate the gold which it contains in a metallic condition, substantially as described.

2. The method of extracting gold from sea water consisting in allowing the sea water to flow into a tank and at the same time mixing therewith a proportion of milk of lime which reacts upon the iodide of gold contained by the sea water to form iodide of calcium and liberate the gold, the sludge formed by the reaction being allowed to settle and the water from the tank being then drawn off and the sludge collected for treatment to extract the metallic gold therefrom, substantially as described.

3. Apparatus for the extraction of gold from sea water by the methods claimed in the preceding claiming clauses comprising a water tank, means for introducing sea water into the said tank, means for allowing the water to be discharged from its surface, a lime tank and means for adding to the sea water as it enters the water tank a proportion of milk of lime and a pit or well into which the deposit resulting from the reaction of the milk of lime upon the sea water can be introduced, substantially as described.

Specification, 6s. 6d. Drawings on application.

Application No. 3405.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (*William Chapman*), "*Improvements in or relating to track construction for Electric Railways operated on the Conduit System.*"—Dated 24th May, 1901.

Claims:—

1. A conduit electric railway in which the underground construction at switches, turn-outs and crossings is carried out by means of cast yokes substantially as described.

2. For a conduit railway a cast yoke having two orifices substantially as described.

3. For a conduit railway a yoke formed of two parts each having a conduit orifice, said parts being separated by a distance piece to which they are secured and the width of which can be varied as the tracks diverge substantially as described.

4. For a conduit railway a yoke containing three conduit orifices and formed of parts each containing one conduit orifice and separated or not by distance pieces substantially as described.

5. A yoke for use at a crossing in which the tracks make a large angle with each other and having extensions for supporting the points of the conduit slots substantially as described with reference to Figures 22 to 24 of the drawings.

6. In a conduit railway diverting the slot from the central position at or near a switch or turn-out for the purpose specified.

7. Conduit yokes constructed substantially as described with reference to any of the forms illustrated in Figures 2 to 15 or 17 to 20 of the accompanying drawings for the purpose specified.

Specification, 10s. 6d. Drawings on application.

Application No. 3406.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (*William Chapman*), "*Improvements in Insulators.*"—Dated 24th May, 1901.

Claims:—

1. An insulator of the kind described and having an upstanding flange on its upper part, either with or without an external or internal overhanging lip, the space within the said flange being filled or not with insulating material, for the purpose specified.

2. Insulators constructed substantially as described and shown in the accompanying drawings.

Specification, 3s. 6d. Drawings on application.

Application No. 3407.—RICHARD SPARROW, of Perth, Western Australia, Licensed Patents Agent (*George Westinghouse*), "*Improvements in Draught Appliances for Railway Vehicles.*"—Dated 24th May, 1901.

Claims:—

1. In a coupling for railway vehicles a pivot block rigidly connected to the movable part of the draw gear having a semi-cylindrical pivotal face and sides tapered towards the front end fitting freely in a vertical central recess in the coupler shank so as to permit an angular motion of the coupler shank in a horizontal plane around the said semi-cylindrical pivotal face of the block, substantially as described.

2. In a coupling for railway vehicles a coupler shank, pivotally connected to the movable portion of the draught gear and so constructed that a lateral movement beyond a certain distance in either direction compresses the draught and operating spring, whereby the said spring tends to return the coupler head to its normal position, substantially as described.

3. Couplings for railway vehicles constructed and operating substantially as described with reference to the accompanying drawings.

Specification, 6s. Drawings on application.

Application No. 3409.—EDWARD JOHN MCFIE, of 317 Argyle Street, Hobart, Tasmania, Master Mariner, "*A new or improved anti-corrosive Boiler Composition, to be called 'McFie's Boiler Composition.'*"—Dated 25th May, 1901.

Claims:—

1. The manufacture of a new or improved article or composition for the prevention of corrosion and for otherwise preserving engine boilers and such like substantially as and by the process hereinbefore described.

2. An article prepared substantially as hereinbefore described.

Specification, 2s.

Application No. 3412.—HYRUM SMITH WOOLLEY, Mining Engineer, Paris, State of Idaho, United States of America, "*Improvements in and relating to Furnaces.*"—Dated 28th May, 1901.

Claims:—

1. In a furnace, the combination of a primary combustion chamber, a secondary combustion chamber, an imperforate air feeding conduit extending from below the secondary combustion chamber to within the same and forming with the walls thereof a restricted passage, and a grate for the primary combustion chamber adapted to direct the incandescent fuel against the imperforate air feeding conduit.

2. In a furnace, the combination of a primary combustion chamber, a secondary combustion chamber situated above and centrally of the primary combustion chamber, a grate for the primary combustion chamber sloping toward the centre thereof, and an imperforate air feeding conduit extending from the centre of the grate to within the secondary combustion chamber and forming with the walls of said chamber a restricted passage.

3. In a furnace, the combination of a primary combustion chamber, a secondary combustion chamber situated above and centrally of the primary combustion chamber, an imperforate conical air feeding conduit extending from below the secondary combustion chamber to within the same and forming with the walls thereof a restricted passage, and a grate for the primary combustion chamber adapted to direct the incandescent fuel against the imperforate conical air feeding conduit.

4. In a furnace, the combination of a primary combustion chamber, a secondary combustion chamber, an imperforate air feeding conduit extending from below the secondary combustion chamber to within the same and forming with the walls thereof a restricted passage, a grate for the primary combustion chamber adapted to direct the fuel against the imperforate air feeding conduit, and means for controlling the delivery of air through said conduit.

5. In a furnace, the combination of a primary combustion chamber, a secondary combustion chamber, an imperforate conical air feeding conduit extending from below the secondary combustion chamber to within the same and forming with the walls thereof a restricted passage, said conduit being of sectional construction whereby the upper section may be removed and other sections of different diameter substituted to vary the area of the restricted passage, and a sloping grate for the primary combustion chamber.

6. In a furnace, the combination of an upper secondary combustion chamber, a lower primary combustion chamber having a crown sloping to the secondary combustion chamber, an imperforate conical air feeding conduit extending from below to within the secondary combustion chamber and forming with the walls thereof a restricted passage, and a grate for the primary combustion chamber sloping to the air feeding conduit.

7. In a furnace, the combination of a primary combustion chamber, a secondary combustion chamber situated above and centrally of the primary combustion chamber, an air feeding conduit extending vertically through the primary combustion chamber and into the secondary combustion chamber, and a grate for the primary combustion chamber sloping towards the air feeding conduit and formed of segments each having transversely sloping portions flanking a longitudinally sloping portion.

Specification, 9s. Drawings on application.

Application No. 3413.—WILLIAM ALLEN PENDRY, of 65 Farnsworth Avenue, Detroit, Michigan, United States of America, Mechanical Engineer, "*Improvements in Button-making Machines.*"—Dated 30th May, 1901.

The claims, numbering 67, may be inspected at the Patent Office. Specification, £3 3s. Drawings on application.
