Complete Specifications.

Patent Office, Perth,
4th October, 1901.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the Complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 3185.—EDWIN SYMONDS, of St. George's Terrace, Perth, Western Australia, Orchardist, "*Machine for making Flower Pots and similar articles.*"—Dated 8th November, 1900.

Claims:—

1. A male die or mold which revolves in a fixed horizontal plane and operated by gearing for the manufacture of flower pots and similar articles, substantially as herein described and as illustrated in the attached drawings.
2. A fixed matrix or mold held in position in or upon an upwardly and downwardly travelling platform which is operated by treadle mechanism for the manufacture of flower pots and similar articles, substantially as herein described and as illustrated in the attached drawings.
3. A vertically adjustable false bottom for holding the clay in the matrix mold and also for acting as an ejection and as a tray for the manufactured pot, substantially as herein described and as illustrated in the attached drawings.
4. A fixed matrix mold mounted upon a vertically travelling platform and being provided with a vertically adjustable combined false bottom and ejector tray all in operative combination with a revolving male die, the whole mounted on a frame and operating by means of driving mechanism for the manufacture of pots and similar articles, substantially as herein described and as illustrated in the attached drawings.

Specification, 5s. Drawings on application.

Application No. 3229.—THOMAS AWDRY, of 99 Cannon Street, London, England, Gentleman, "*Improvements in or relating to Label or Ticket Holders.*"—Dated 14th December, 1900.

Claims:—

1. In label or ticket holders, a casing or container having a surface for writing upon in combination with duplicate sheets, a clip attached to said casing for the attachment of the device to the required object, substantially as described and illustrated herein and for the purposes set forth.
2. In label or ticket holders, a casing having a pivotted lid in combination with duplicating surface carried in said casing, said casing being attached or recessed in a trunk or other object, a serrated or toothed

surface upon said lid for marking or perforating the removable band or bands at the desired point, a hasp or fastening attached to the pivotted lid aforesaid, a lock for securing said lid through the medium of the hasp aforesaid of any suitable form all in combination and substantially as described and illustrated herein.

Specification, 3s. 6d. Drawings on application.

Application No. 3253.—EWEN MCGREGOR, of Mangaonoho, New Zealand, Sawmiller, "*Improvements in apparatus for use in Excavating, Dredging, Transporting and Elevating Earth and in other similar operations.*"—Dated 2nd January, 1901.

Claims:—

1. In apparatus for excavating or dredging earth and similar operations, a scoop to the top frame of which are pivotted two right angled arms, that extend down each side of the scoop and engage with catches thereon, the other ends of the arms being connected to links that are pivotted to a cross bar with an upwardly extending arm, such arm being provided on its top end with a groove, as herein specified.
2. In apparatus for excavating or dredging earth and similar operations a scoop provided on each side with forwardly extending arms which are contracted together in front of the scoop, such arms being capable of being moved up and down, and a wheel mounted in bearings upon the forward ends of the arms, as herein specified.
3. In apparatus for excavating or dredging earth and similar operations, a carrying rope to which is secured a tapered enlargement piece, as herein set forth.
4. In apparatus for excavating or dredging earth and similar operations, a scoop that is suspended from a carrying rope and which is kept in a level position by means of catches upon right angled lever arms pivotted to the top frame of the scoop, and that is provided with forwardly extending arms, such scoop being connected to an endless hauling rope by means of short connections secured to the front and back of the scoop and the hauling rope, as specified.
5. In apparatus for excavating or dredging earth and similar operations, a scoop that is suspended from a carrying rope and which is kept in a level position by means of catches upon right angled lever arms pivotted to the top frame of the scoop, and that is provided with forwardly extending arms, such scoop being connected to an endless hauling rope by means of short connections secured to the front and back of the scoop and the hauling rope in combination with an enlargement piece secured to the carrying rope, as herein set forth.
6. In apparatus for excavating or dredging earth and similar operations, a carrying rope upon which is mounted a scoop provided with rollers, one end of such carrying rope being passed round a block or pulley secured to an anchor, and enclosed in a clamp that is connected by means of block and tackle to a similar clamp secured to the body of the carrying rope, as and for the purposes herein set forth.

Specification, 11s. 6d. Drawings on application.

Application No. 3480.—OESTERREICHISCHE GAS-GLUHLICHT UND ELECTRICITÄTS GESELLSCHAFT, of 4 Schleifmühlgasse, Vienna, Austria (assignee of DR. CARL AUER VON WELSBACH), "*Improvements in Supports for Osmium Filaments.*"—Dated 31st July, 1901.

Claims:—

1. A support for osmium filaments composed of sintered or fritted refractory oxide, non-adherent to incandescent osmium and chemically indifferent thereto, substantially as described.
2. A support for osmium filaments, composed of a sintered or fritted mixture of refractory oxides, non-adherent to incandescent osmium and chemically indifferent thereto, substantially as described.
3. A support for osmium filaments, composed of a sintered or fritted mixture of rare metal oxide and other refractory oxide, substantially as described.

4. A support for osmium filaments, composed of a sintered or fritted mixture of rare metal oxide and magnesia, substantially as described.

5. A support for osmium filaments, composed of a sintered or fritted mixture of thorium oxide and other refractory oxide, substantially as described.

6. A support for osmium filaments, composed of a sintered or fritted mixture of thorium oxide and magnesia, substantially as described.

7. A support for osmium filaments, composed of a sintered or fritted mixture of ten parts by weight of thorium oxide and one part by weight of magnesia, substantially as described.

Specification, 4s. 6d.

Application No. 3482.—EDWARD WATERS, Junior, of 414-418 Collins Street, Melbourne, Victoria (*The Linotype Company, Limited*), "*Improvements in Linotype Machines*."—Dated 31st July, 1901.

The claims, numbering 50, may be inspected at the Patent Office.

Specification, £8 12s. Drawings on application.

Application No. 3492.—JOHN WARREN, of the Broken Hill Proprietary Block 10 Mine, New South Wales, Mining Manager, "*Improvements in Electro-Magnetic Ore Separators*."—Dated 5th August, 1901.

Claims:—

1. The herein described method of feeding comminuted ore or other material into a magnetic field consisting in the employment of a plain horizontally rotating disc whereby regulated quantities of material are by the rotation of said disc gradually carried within the influence of a magnetic field constituted and adapted by the aid of another rotating separator disc and an electro-magnet to draw off a regular and continuous strip consisting of the more magnetic particles of the material to and over the edge of the lower or feed disc, substantially as described.

2. In a magnetic ore separator the combination and arrangement of (a) a plain horizontally rotating feed disc (b) an electro-magnet whose pole pieces are arranged and fixed so as to constitute a field of high magnetic influence across the portion of the feed disc covered by the ore or material under treatment (c) a saucer-shaped separator disc rotating at preferably a higher speed than the feed disc between the magnet poles and the feed disc (d) means of adjusting vertically the proximity of the magnets, the separator disc and the feed disc in relation to each other, substantially as herein described and as illustrated by the drawings.

3. In a magnetic ore separator the combination and arrangement of (a) a plain horizontally rotating feed disc (b) several electro-magnets the poles of each of which are arranged and fixed so as to constitute a field of high magnetic influence across the portion of the feed disc covered by the ore or material under treatment (c) several saucer-shaped discs rotating one under each magnet preferably at a higher speed than the feed disc (d) means of adjusting vertically the proximity of the magnets, the separator discs and the feed disc in relation to each other, substantially as herein described and as illustrated by the drawings.

4. The combination and arrangement of parts forming the improved electro-magnetic ore separator, substantially as herein described and as illustrated in the drawings.

5. The combination and arrangement of magnets and mechanism for securing a field of high magnetic influence of the kind herein described and for the purposes set forth and illustrated by the drawings.

Specification, 10s. Drawings on application.

Application No. 3495.—DR. CARL FREIHERR AUER VON WELSBACH, of IV. Wiedener Hauptstrasse, No. 69, Vienna, Austria, Chemist, "*Improvements in Electrical Accumulators and Primary Cells*."—Dated 5th August, 1901.

Claims:—

1. In an electrical accumulator or primary cell, a depolariser consisting of a ceric salt, substantially as described.

2. An electrical accumulator comprising a carbon electrode and a zinc, mercury, or like electrode, and an electrolyte consisting of a solution of a cerium salt and a zinc or cadmium salt, preferably sulphates, with or without other salts which dissolve basic ceric salts, substantially as described.

3. An electrical accumulator having as its anode graphitic carbon filaments, substantially as described.

4. In an electrical accumulator the arrangement by which the electrolyte flows through or over the electrodes in proportion as the charging or discharging proceeds, substantially as described.

5. The herein described manufacture of a graphitic carbon electrode by first impregnating a substance rich in cellulose with phosphoric acid, then carbonising this substance at a low temperature, then washing out of it the phosphoric acid and finally heating it to a high temperature.

Specification, 11s. Drawings on application.

Application No. 3499.—HUGH FITZALIS KIRKPATRICK-PICARD, Metallurgist, of 44 London Wall, London, England, "*Improved Process for the Recovery of Zinc from Sulphide Ores*."—Dated 8th August, 1901.

Claims:—

1. The process of treating sulphide ores containing zinc, which consists in mixing the unroasted ore with a reducing agent and carbonaceous material suitable for coking, forming the mixture into briquettes and distilling the briquettes in such conditions that they are first coked into coherent masses, and finally the zinc is reduced and volatilized whilst the resulting sulphide is retained in minute particles throughout the coke.

2. The process of treating sulphide ores containing zinc and other metals, which consists in mixing the unroasted ore with a reducing agent and carbonaceous material suitable for coking, forming the

mixture into briquettes and distilling the briquettes under such conditions that they are first coked into coherent masses, and finally the zinc is reduced and volatilized whilst the resulting sulphide and the non-volatile metals are retained in minute particles throughout the coke.

Specification, 4s. Drawings on application.

MALCOLM A. C. FRASER,
Registrar of Patents.

Patent Office, Perth,
27th September, 1901.

Notice of Application for Amendment.

[N.B.—The paging referred to is that of the proposed Amended Specification.]

IN the matter of Application for Letters Patent No. 3222, dated 8th December, 1900, by JOHN JAMES CHRISTMAS, of Perth, Western Australia, Mining Agent, for an invention for "*An improved Concentrating and Gold-saving Table.*"

Notice is hereby given that the above JOHN JAMES CHRISTMAS has applied for leave to amend the complete Specification and drawings of his invention, alleging as his reason for so doing, "*in order to more fully and accurately explain the exact nature of my invention and its essential features.*"

The amendments proposed are as follows, viz. [Reference being had to amended copy of Specification and drawings lodged in Patent Office, Perth]:—

Strike out the whole of page 1.

Page 2.

Strike out lines 1 to 5, and insert the words:—"*This invention relates to the construction and arrangement of an improved table which has for its object the exhaustive concentration of all classes of ore, slimes, tailings, and other finely-divided material, so as to win the gold particles contained therein or other valuable metallic concentrates.*"

Strike out the balance of page 2.

Pages 3 and 4.

Insert the following:—"*In order that my invention may be clearly and accurately understood, I will refer to the accompanying drawings which illustrate the construction of same.*"

In these drawings:—

Figure 1 shows a portion of the table in longitudinal section, and with the travelling brush.

Figure 2 being a similar view showing the detachable ripple constructed of wood in lieu of composition.

Figure 3 is a transverse view of the table mounted on its frame; while

Figure 4 is a top plan of same.

In these drawings the arrows in full denote the incline of the table, and the consequent flow of the wash water, and the stuff under treatment, while the broken arrows show the direction of the travelling brush, and of the consequent removal of the concentrates.

A represents the corrugated table which is formed with the crests or ripples as A1 and the troughs or depressions as A2 and such table is placed at the approved incline and provided with the head or feed apron as A3 and on to which the stuff to be concentrated is delivered. On and along this table I place or bed down a blanket, canvas or analogous material as B in such a manner as to closely follow the contour of the table A and as clearly shown in Figures 1 and 2 by dotted lines. In the troughs A2 of the table I employ a certain composition formed approximately of seven parts resin and one part of fat or oil. This composition is poured on when hot and thereby forms the additional ripples of the shape as shown in Figure 1 by the letter C or approximating thereto. This composition adheres to the blanket as B and at its conjunction on either side forms the traps C1 in which the gold and concentrates are collected, and which concentrates are denoted in Figures 1 and 2 by small dots.

In lieu of this composition for forming the additional ripple and traps I may employ a wood ripple as D if the section shown in Figure 2, and which ripple is secured in a detachable manner to the main table A by means of the screw D2.

The table is provided with a longitudinal carry-away gutter as E into which the concentrates are swept as they accumulate in the traps C1, while on the opposite side of the table is formed the piece E1 for to give an easy lead to the brush. To effect such removal I employ the brush F which travels in a direction transversely to that of the lie of the table. This brush is connected to the belts F1, which latter travel over the wheels F2 on the running shafts F3 as mounted on the brackets shown in Figure 3. These wheels being driven by the pulleys F4 in usual manner.

It is obvious that I may attach two or more brushes to these travelling belts so as to effect a more constant

Page 5.

Insert the following:—removal of the concentrates as the amount of accumulation of the concentrates in the traps is controlled and determined either by the speed of the travel of the brush or the number of the brushes employed.

The mode of operation of the invention is apparent and easily followed by a perusal of this specification in conjunction with the attached drawings.

Strike out lines 8-22.

Insert the following :-

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed I declare that what I claim is :-

Page 6.

Insert the following :-

1. In combination with a concentrating table, additional ripple pieces formed of a peculiar composition substantially as herein set forth and described and as illustrated in Figure 1 of the accompanying drawings.

2. In combination with a concentrating table, a brush or brushes which travels or travel transversely across such table for the removal of the concentrates substantially as herein set forth and described and as illustrated in Figures 1, 3, and 4 of the attached drawings.

3. In combination with a concentrating table:—Additional ripple pieces made of wood and which ripples are secured to the main table, but in a detachable and replaceable manner, substantially as herein set forth and described and as illustrated in Figure 2 of the attached drawings.

4. The construction of an improved gold saving table covered with blanketting and provided with additional ripple pieces made of a peculiar composition or of wood and with a carry away gutter in combination with a travelling brush or travelling brushes for the removal of the concentrates substantially as herein set forth and described and as illustrated in the accompanying drawings.

Any person or persons intending to oppose the said application for amendment must leave particulars, in writing (on Form G.) of his or their objections thereto, within one calendar month from the date hereof. A fee of ten shillings (10s.) is payable with such notice.

Dated this 6th day of September, 1901.

MALCOLM A. C. FRASER,
Registrar of Patents.
