Claims:

1. In combination a roller having bearings in a frame plate, a disc (provided with blocks or the like) secured to one end of roller, and a pivoted "pendulum" operated by a cord and arranged to engage and disengage with the blocks or the like on said disc substantially as and for the purposes described.

2. In combination a roller to which blind or blind cords are secured and having bearings in brackets on frame plate, a disc having blocks or the like thereon set at one end of the roller and a "pendulum" pivoted to a bracket and having an arm to which cord is attached and a weighted arm substantially as and for the purposes described.

3. In combination a roller as C having attached the blind supporting cords (K) and an operating cord (M), said roller having bearings in brackets as B and J, a disc as D (having blocks as d thereon) attached to one end of the roller, a pendulum as E pivoted to the bracket B and having a cord attached to one arm and a weight attached to opposite arm substantially as and for the purposes described.

4. The combination and arrangement of the whole of the parts for the purposes described and substantially as illustrated upon the accompanying sheet of drawings.

Specification, 3s. Drawings on application.

Application No. 3735.—FRESH AIR AND SAFETY SASH FASTENER COMPANY, LIMITED, of Adelaide, South Australia (Assignee of ROBERT WILLIAMS), "*Improvements in Sash-fasteners*."—Dated 4th February, 1902.

Claims:

1. In sash fasteners the combination with a spring pin attached to the sash and adapted to engage slots or recesses of a knob or head working on spiral shaped or inclined surfaces whereby it is moved in and out when turned substantially as described.

2. In sash fasteners the combination with a spring pin attached to the sash and adapted to engage slots or recesses of a knob or head having spiral shaped or inclined surfaces engaging corresponding spiral shaped or inclined surfaces substantially as herein described.

3. In sash fasteners the combination with a spring pin attached to the sash and adapted to engage slots or recesses of a cylindrical knob or head having spiral shaped or inclined edges engaging corresponding spiral shaped or inclined surfaces substantially as herein described.

4. In sash fasteners the combination with a spring pin engaging slots or recesses and operated by a cylindrical knob or head having spiral shaped inclined edges of a plate attached to the sash and having a stud

upon which the cylindrical-shaped knob or head works and provided with corresponding spiral shaped or inclined edges substantially as herein described.

5. In sash fasteners the combination with a spring pin attached to the sash and adapted to engage slots or recesses of a knob or head working on spiral shaped or inclined surfaces and engaging a notch or recess at the highermost point substantially as herein described.

6. In sash fasteners the combination with a spring pin attached to the sash and adapted to engage slots or recesses of a knob or head having spiral shaped or inclined surfaces working on corresponding spiral shaped or inclined surfaces provided with a notch or recess at the highermost point in which the point of the said knob or head engages substantially as herein described.

Specification, 6s. Drawings on application.

Notice of Application for Amendment.

THE PATENTS ACTS, 1888-1894.

IN the matter of Letters Patent No. 3040, dated 1st August, 1900, by THOMAS HENRY PEARSE, of 89 State Street, Boston, United States of America, Gentleman.

Notice is hereby given that the above Thomas Henry Pearse has applied for leave to amend the complete specification of his invention, alleging as his reason for so doing: "That either in transmission or copying a part of the original specification was inadvertently lost, said loss not being discovered until the specification had been accepted, and that said part, being descriptive of the subject matter of Claims 3, 4, and 5, and being illustrated in Figures 6 to 11, inclusive, of the drawings, is important to the full understanding of the invention."

The amendments proposed are as follows, viz. [Reference being had to amended copy of specification lodged in Patent Office, Perth]:—

Page 3, line 16.

After the words "of rolls" insert "arranged tangentially to each other."

Page 6, line 30.

After the word "substances" insert:—

"Referring now to Figures 6 and 11 where are shown the details of construction of the form of clearer and operating mechanism therefor as shown in Figure 3, it will be seen that the clearer is divided into a number of sections 70, six being shown, each section being operated by two eccentrics on the eccentric shaft 14, said sections being held in proper alignment by guide plates 71, 72, bolted to the ribbed cross plate 12.

"This cross plate is exceedingly rigid and co-operates with the multipart or sectioned arrangement of the clearer in making it possible to maintain the vibrations of the clearer at an exceedingly high speed, thereby enabling the machine to turn out a greatly increased output.

"Each section of the clearer is composed of a base plate 73, which, in case the comb-like form of clearer is used, serves as a carrier for the teeth 65, and on this base plate is mounted a second plate 74, having a housing 75 adjacent each end thereof, in which the arms 76 from the eccentric straps are pivotally mounted on studs or short shafts 77, passing through said housings and secured therein by pins 78.

"The arms 76 have stops 79 in order to keep them properly centred in said housings, and each arm 76 terminates at its rear end in a semi-circular portion 80 of the eccentric strap, the remainder thereof being composed of the opposite semi-circular portion 81, which together are bolted about the adjacent eccentric."

Any person or persons intending to oppose the said application for amendment must leave particulars, in writing (on Form G.), of his or their objections thereto, within one calendar month from the date hereof. A fee of ten shillings (10s.) is payable with such notice.

Dated this 14th day of February, 1902.

R. G. FERGUSON,
Acting Registrar of Patents.
