Complete Specifications.

Patent Office,
Perth, 14th March, 1902.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten Shillings (10s.) is payable with such notice.

Application No. 3706.—SAMUEL HARRIS, of Lakeside, Kalgoorlie, Engineer, "*The Rapid Evaporator*."—Dated 6th January, 1902.

Claims:—

1. In an evaporating apparatus a rectangular trough G having an overflow spout or lip S on one end, lugs or brackets T on each end, and strips N on the bottom to act as slides substantially as described and illustrated in drawings.
2. In an evaporating apparatus, a rectangular trough G made to contain water and designed to fit around a frame in the bottom of a vapour chamber, forming a low pressure vapour tight joint substantially as described and illustrated in drawings.
3. In an evaporating apparatus a cast iron or other metal tray E formed by an angle iron frame F and a flat or slightly domed plate E constructed to fit into a trough G which is filled with water, and forming a low pressure water tight joint, substantially as described and illustrated in drawings.
4. In an evaporating apparatus, a system of delivering water on to a tray E in the form of particles or a fine spray and in such quantities as will not tend to materially cool the tray but will be instantly evaporated, substantially as described and illustrated in drawings.
5. In an evaporating apparatus plates Q acting as bars to carry the trough G on which the trough is raised, and at the same time to form a door or shutter over the openings P to prevent the access of cool air above the fire. The said plates to be raised or lowered by means of a system of levers and bell cranks or by other approved means. Substantially as described and illustrated in drawings.
6. In an evaporating apparatus, a system of grooves and trestles or rails upon which the trough G may be made to slide, and on which a clean trough and tray may be pushed in at the same time pushing the new trough and tray out on the other side of the apparatus where it will rest while cleaned and made ready for returning, substantially as described and illustrated in drawings.
7. In an evaporating apparatus, a combined arrangement whereby water delivered in a fine spray on to a plate or tray E and heat applied to the said tray to rapidly evaporate the water and in which the tray is made easily interchangeable, and also a low pressure vapour tight joint made in the vapour chamber H by means of a trough G, in which a body of water is maintained enveloping the lower edges of the vapour chamber H and the flanges or frame F of the tray E forming an apparatus for rapidly evaporating water, substantially as described and illustrated in drawings.

Specification, 6s. Drawings on application.

Application No. 3753.—ANDREW McLEOD, of Arch Hill, near Auckland, New Zealand, Commission Agent, "*A Combination Game played on a Board with Movable Pieces*."—Dated 25th February, 1902.

Claims:—

1. In a combination game of the kind described a board having therein a series of pockets, apertures, recesses, or holes, ordinarily one hundred and twenty-one in number, arranged in eleven parallel rows for the purpose set forth substantially as described.
2. In a combination game of the kind described a board having therein a series of pockets, apertures, recesses, or holes, ordinarily one hundred and twenty-one in number, arranged in eleven parallel rows and having a duplicate board suitably hinged thereto and provided with a means of fastening the duplicate board thereto for the purpose set forth substantially as described.
3. In a combination game of the kind described a plurality of marbles or other spherical bodies divided into groups of equal number, each group distinguishable from the other by being differently coloured, and a single marble or spherical body called a joker, distinguishable from all the others for the purpose set forth substantially as described.
4. In a combination game of the kind described a board having therein a series of pockets, apertures, recesses, or holes ordinarily one hundred and twenty-one in number, arranged in eleven parallel rows to loosely hold a plurality of marbles or other spherical bodies divided into groups of equal number, ordinarily six groups of six marbles in each group, distinguishable by being differently coloured and adapted to be moved to any unoccupied hole on said board, and the centre hole to hold a single marble or spherical body called a joker, distinguishable from all the others, said joker kept stationary, all for the purpose set forth substantially as described.

Specification, 6s. 6d. Drawings on application.

Notice of Application for Amendment.

THE PATENTS ACTS, 1888-1894.

IN the matter of Letters Patent No. 3040, dated 1st August, 1900, by THOMAS HENRY PEARSE, of 89 State Street, Boston, United States of America, Gentleman.

Notice is hereby given that the above Thomas Henry Pearse has applied for leave to amend the complete specification of his invention, alleging as his reason for so doing: "That either in transmission or copying a part of the original specification was inadvertently lost, said loss not being discovered until the specification had been accepted, and that said part, being descriptive of the subject matter of Claims 3, 4, and 5, and being illustrated in Figures 6 to 11, inclusive, of the drawings, is important to the full understanding of the invention."

The amendments proposed are as follows, viz. [Reference being had to amended copy of specification lodged in Patent Office, Perth]:—

Page 3, line 16.

After the words "of rolls" insert "arranged tangentially to each other."

Page 6, line 30.

After the word "substances" insert:—

"Referring now to Figures 6 and 11 where are shown the details of construction of the form of clearer and operating mechanism therefor as shown in Figure 3, it will be seen that the clearer is divided into a number of sections 70, six being shown, each section being operated by two eccentrics on the eccentric shaft 14, said sections being held in proper alignment by guide plates 71, 72, bolted to the ribbed cross plate 12.

"This cross plate is exceedingly rigid and co-operates with the multipart or sectioned arrangement of the clearer in making it possible to maintain the vibrations of the clearer at an exceedingly high speed, thereby enabling the machine to turn out a greatly increased output.

"Each section of the clearer is composed of a base plate 73, which, in case the comb-like form of clearer is used, serves as a carrier for the teeth 65, and on this base plate is mounted a second plate 74, having a housing 75 adjacent each end thereof, in which the arms 76 from the eccentric straps are pivotally mounted on studs or short shafts 77, passing through said housings and secured therein by pins 78.

"The arms 76 have stops 79 in order to keep them properly centred in said housings, and each arm 76 terminates at its rear end in a semi-circular portion 80 of the

eccentric strap, the remainder thereof being composed of the opposite semi-circular portion 81, which together are bolted about the adjacent eccentric."

Any person or persons intending to oppose the said application for amendment must leave particulars, in writing (on Form G.), of his or their objections thereto, within one calendar month from the date hereof. A fee of ten shillings (10s.) is payable with such notice.

Dated this 14th day of February, 1902.

R. G. FERGUSON,
Registrar of Patents.

Notice of Application for Amendment.

THE PATENTS ACTS, 1888-1894.

IN the matter of Letters Patent No. 2954, dated 8th May, 1900, by ABEL HARBER and WILLIAM SIVYER, both of Guildford, Western Australia, Brick Manufacturers.

Notice is hereby given that the above Abel Harber and William Sivyver have applied for leave to amend the complete specification of their invention, alleging as their reason for so doing: "In order to exactly and more fully describe and set forth the objects, purposes, and uses of the invention, and to which the same is applicable."

The amendments proposed are as follow, viz. [Reference being had to amended copy of specification lodged in Patent Office, Perth]:—

Page 2, line 5.

After the word "therein" insert "this invention is also adapted and applicable for roasting or burning clay, earth, bricks, tiles, lime, potteryware, and all other articles or matter of a such like nature, and in this specification the word 'ores' may be read and understood as including, covering, and expressing such latter-named articles and matter."

Any person or persons intending to oppose the said application for amendment must leave particulars, in writing (on Form G.), of his or their objections thereto, within one calendar month from the date hereof. A fee of ten shillings (10s.) is payable with such notice.

Dated this 7th day of March, 1902.

R. G. FERGUSON,
Registrar of Patents.
