Complete Specifications.

Patent Office, Perth,
28th March, 1902.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten Shillings (10s.) is payable with such notice.

Application No. 3571.—SAMUEL COHEN HARWOOD, of Midland Junction, in the State of Western Australia, in the Commonwealth of Australia, Engineer, and DAVID WILLIAM HARWOOD, of Milligan Street, City of Perth, in the said State, Malster, "*An Improved Spark Arrester.*"—Dated 30th September, 1901.

Claims:—

1. In locomotive or other engines the hollow deflector D, having a feather edge and long-faced cone in combination with the rings, substantially as shown in the drawings and for the purpose described herein.

2. In locomotive or other engines the perforated plates E, F, G, and J in combination with the deflector D and the deflector ring H, substantially as shown and described for the purpose of arresting and destroying any sparks escaping with the steam.

3. In locomotive or other engines the perforated cylinder I in combination with the other parts mentioned in our preceding claims for use in engines whose smoke-boxes may not be in good order.

4. In locomotive or other engines the combination and arrangement of the various parts and appliances as herein described for effectually arresting and destroying sparks without diminishing the effective power of the engine or interfering with its steaming abilities.

Specifications, 4s. Drawings on application.

Application No. 3756.—RICHARD SPARROW, of Perth, Western Australia, Patents Agent, and ROBERT SIEGFRIED, "*Improved Collector Rings for Electrical Machines.*"—Dated 27th February, 1902.

Claims:—

1. For an electrical machine, a plurality of collector rings arranged side by side and having supporting arms that project into approximately the same plane by means of which arms they are secured to a supporting ring.

2. For an electrical machine, collector rings constructed and supported substantially as described with reference to the drawings.

Specification, 2s. 6d. Drawings on application.

Application No. 3758.—GEORGE DOW ROSS, of 12 Regent Park Terrace, Strathbungo, Glasgow, Scotland, Engineer, "*An Improved arrangement for Shifting the Points of Tramway or Railway Lines.*"—Dated 4th March, 1902.

Claims:—

1. An apparatus for shifting the points of tramway and railway lines characterised by a working plate which is provided with cross grooves upon its upper surface said plate being connected to the point to be shifted and being moved from side to side by means of a shifting shoe which is depressed by the driver of the car and caused to enter one or other of the cross grooves, substantially as hereinbefore described.

2. The combination of a working plate having cross grooves on its upper surface, of a rocking arm working within a box and means for connecting this arm to the point to be shifted, substantially as hereinbefore described.

3. The combination of a box made broad and flat at its upper end and narrow and tapered at its lower side with a drain hole at the bottom, a working plate with cross grooves on its upper surface fitted in the box, a rocking arm for supporting the working plate, guide ways leading to and from the box, means for connecting the arm to the point to be shifted, and a device on the car adapted to work in the cross grooves of the working plate so as to shift it and the point, substantially as hereinbefore described with reference to the drawings annexed.

4. The construction of the whole arrangement substantially as hereinbefore described and shown at Figures 1, 2, 3 and 4 of the drawings annexed.

5. The modified arrangement described with reference to Figure 5 of the drawings annexed.

6. The modified arrangement substantially as hereinbefore described with reference to Figures 6 and 7 of the drawings annexed.

Specification, 6s. Drawings on application.

Application No. 3759.—EDWARD SMETHURST, of Christchurch, in the Colony of New Zealand, Commission Agent, "*Improved mode of and apparatus for Defrosting Frozen Food, and which may also be used in the preservation of perishable comestibles.*"—Dated 4th March, 1902.

Claims:—

1. The herein described process to be used in defrosting frozen food and more particularly frozen mutton and lamb which consists in placing the food upon a revolvable apparatus whereby it shall be subjected to continuous draught of fresh air due to the rotary motion of the machine, substantially as described and for the purposes set forth.

2. In the defrosting of frozen food and more particularly frozen mutton and lamb the employment of a revolvable apparatus whereon carcasses of frozen meat are hung so that when the machine is revolved the meat shall be subjected to a continuous draught of fresh air which absorbs the moisture upon the carcasses as the frost thaws substantially as and for the purposes set forth.

3. In the defrosting of frozen food and more particularly frozen mutton and lamb, a revolvable apparatus of either circular or elliptical shape, placing the frozen food thereon and revolving it so that a draught of air may be caused to circulate around its contents as explained and for the purposes set forth.

4. In the preservation of perishable comestibles placing the food upon a revolvable apparatus so that a draught of fresh air shall be caused to circulate freely among the goods thereby keeping them cooler and fresher, substantially as set forth and explained.

5. The herein described process and apparatus for defrosting frozen food and for preserving perishable comestibles, substantially as herein explained and described.

Specification, 4s. Drawings on application.

Application No. 3764.—ABINGER WHITTOME, of Burnt House, and CECIL WHITTOME, of Arnsdorf, both in Whittlesea, in the County of Cambridge, England, Merchant Farmers, "*Improvements in Preparing and Compressing Forage and the like, and in apparatus therefor.*"—Dated 6th March, 1902.

Claims:—

1. In preparing and compressing forage and the like, first driving off the moisture by means of an evaporating cylinder through which the forage slowly passes, then submitting it to the heat of a supplementary steam plate and then compressing the dried material substantially as described.

2. In preparing and compressing forage and the like, an evaporating cylinder having an inner and outer steam jacket, a steam-heated plate receiving and drying the material, and delivering it to the press substantially as described.

3. In compressing forage and the like, a press having a removable plate for temporarily supporting the forage before compression and means for supporting the plate so that it can be readily withdrawn to allow the forage to rest upon the ram head, substantially as described.

4. For compressing forage and the like, a press comprising a casing having a removable plate for temporarily supporting the forage before compression, and a ram head having recesses for the baling ties, and wedges for temporarily closing said recesses during compression, substantially as described.

5. In compressing forage and the like, a press having a ram head provided with a slot or slots for receiving a bale tie or ties and means for temporarily closing said slots during compression and before the bale ties are inserted, such means being readily removable, substantially as and for the purpose set forth.

6. In compressing forage and the like, a press having a ram head provided with a slot or slots for receiving a bale tie or ties and reversely arranged wedges for temporarily closing such slots during compression, and before the bale ties are inserted, substantially as described.

Specification, 6s. Drawings on application.

Application No. 3768.—COURTENAY WILLIAM THOMPSON, of 5 Fair Street, Tooley Street, in the County of London, England, Mining Engineer, "Improvements in apparatus for use in Filtering or Separating Liquids from Solids."—Dated 11th March, 1902.

Claims:—

1. In a pressure filter, a chamber containing in its upper part filtering media and in its lower part a conveyer, or creeper, and means for removing the solid matter intermittently, and consequently in coagulated form, from the filter-cloths, so that it descends to the conveyer, or creeper, and is by it conducted to an outlet, or outlets; substantially as hereinbefore described.

2. In a pressure filter, a chamber containing in its upper part flat, curved, or concentric, filter plates and cloths, arranged parallelwise with respect to each other, so as to give a large filtering area in a small space, and in its lower part a conveyer, or creeper, and means for removing the solid matter intermittently, and consequently in coagulated form, from the filter-cloths so that it descends to the conveyer, or creeper, and is by it conducted to an outlet, or outlets; substantially as hereinbefore described.

3. In a pressure filter arranged in accordance with either of the two preceding claiming clauses the combination with each of the plates and cloths, or each of a group of plates, and cloths, of passages for the outlet of liquid, and for the inflow of liquid at a pressure in excess of the filtering pressure, and means for controlling such passages, so that, whilst some of the plates and cloths are in filtering operation, solid matter can be removed from the cloths of other of the plates, substantially as hereinbefore described.

4. In a pressure filter arranged according to either of the three preceding claiming clauses, a conveyer or creeper, and means for operating it by a series of forward jerks, or by backward and forward jerks, but with the total forward movement greater than the total backward movement, substantially as hereinbefore described.

5. In a pressure filter arranged according to either of the four preceding claiming clauses, the combination with the plates and filter-cloths, of means for holding back the filter-cloths to the plates whilst a reverse flow is put on for removing solid matter from the cloths, substantially as hereinbefore described.

6. The several devices for the purposes of the last preceding claiming clause, the said devices being such as are described with reference to Figures 3, 4, 5, 6, and 7 of the accompanying drawings.

7. In a pressure filter, the combination of compartments arranged in series, or as zig-zag passages, and means for admitting the matter to be treated to the first compartment, and for the escape of solid matter from the last compartment, and means for carrying off liquid from each compartment, and means for removing solid matter from the filtering surfaces, substantially as hereinbefore described.

8. In pressure filters arranged in accordance with the last preceding claiming clause, brushes, or scrapers, carried by two, or more revolving arms in each compartment, the brush, or scraper, or brushes or scrapers on each arm occupying a position, or positions, different from the position, or positions, occupied by the brush or scraper, or brushes or scrapers, on the other arm, or arms, so that the respective brushes, or scrapers, remove solid matter from different portions of the filter cloths, substantially as hereinbefore described.

Specifications, 13s. 6d. Drawings on application.

Application No. 3773.—GEORGE WATERS PITT, gentleman, of South Molton Mansions, and EDWARD MARTIN, Engineer, of 27 Park Lane, Stoke-Newington, both in the County of London, England, "Improvement in or relating to Wheels and Tyres for Vehicles."—Dated 11th March, 1902.

Claims:—

1. In wheels and pneumatic tyres for vehicles, the combination of a felloe formed with serrations running alternately radially and circumferentially on each side, a steel band with or without grooves, and a flat ring on each side of a U shaped band and bolts for securing such rings in position all substantially as set forth.

2. In wheels and tyres such as those described, forming the felloe (or felloe and flat rings) with projections or indentations, substantially as and for the purposes set forth.

Specification, 3s. 6d. Drawings on application.

Application No. 3774.—HIRAM JONES, of 99 South Street, Ascot Vale, in the County of Bourke and State of Victoria, Engineer, "An improved Machine for Cutting Tobacco, to be worked by hand, steam, or other motive power."—Dated 11th March, 1902.

Claims:—

1. In a machine for cutting tobacco, the combination of the holding plate H with vertical springs H² substantially as herein described and shown.

2. In a machine for cutting tobacco, the combination of horizontal spiral springs I² with loose collar F working on plain part of screw I and which causes the re-engagement of extended nut P¹ with screw I, when the motion of ratchet wheel J is reversed, substantially as herein described and shown.

3. The herein specified machine for cutting tobacco constructed and arranged substantially as described and illustrated as and for the purposes set forth as a combination of parts.

Specifications, 2s. 6d. Drawings on application.

Application No. 3776.—THE MUTUAL BENEFIT BONUS COMPANY, LIMITED, of No. 80 Bathurst Street, Sydney, State of New South Wales, Commonwealth of Australia, (assignee of JOHN THOMAS), "A new or improved Trade Coupon, and an improved method of advertising."—Dated 11th March, 1902.

Claims:—

1. The new or improved Trade Coupon hereinbefore described.
2. The new method of advertising hereinbefore described.
3. A Trade Coupon designed to carry out a system of cash discount on purchases made at intervals from a trader, combined with the advertisement of the trader, substantially as described.

Specification, 7s.

Application No. 3777.—JAMES HENRY ANDERSON, of the firm of ANDERSON, ANDERSON, & ANDERSON, LIMITED, 35 Saint Paul's Churchyard, London, E.C., England, Manufacturer, "Improvements in Golf Practice Apparatus."—Dated 13th March, 1902.

Claim:—

In a golf practice apparatus, the combination of a base having a circular recess therein and provided with a circular top, the surface of which is divided into graduations; with a spring-controlled arm having its rear downwardly turned end revolvably mounted in said recess and in a revolving boss mounted around the raised track surrounding said central recess; and a forward struck up end of said arm carrying a loose sleeve to which a captive ball is flexibly connected, said struck up part having a graduated surface, and a spring clip mounted upon it; and an indicating arm on the periphery of the said revolving boss, said indicating arm being dropped below the said spring-controlled arm and having a pivoted toggle arranged to offer a resistance to the movement of the spring-controlled arm in one direction substantially as hereinbefore described and as illustrated by the drawings.

Specification, 5s. Drawings on application.
