

Supplement to Government Gazette

OF

WESTERN AUSTRALIA.

[Published by Authority.]

No. 55.
P.O. No. 33.

PERTH: FRIDAY, AUGUST 15.

[1902.]

CONTENTS:

SUBJECT.	PAGE	SUBJECT.	PAGE
Complete Specifications accepted	3529	Alphabetical list of Registrants of Trade Marks ...	3541
Provisional Specifications accepted	3534	Alphabetical list of Goods for which Trade Marks have been registered	3541
Applications for Registration of Trade Marks ...	3534		

Note.—Throughout this Gazette the names in Italics within parentheses are those of Communicators of Inventions.

Complete Specifications.

Patent Office, Perth,
15th August, 1902

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the *Western Australian Government Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 3683.—RICHARD NOEL WELLS, of Kanoona, in the State of Western Australia, Mining Engineer, "*Process of and appliance for the Centrifugal Leaching and Filtration of Sands, Slimes, or other finely-divided Metalliferous Matter.*"—Dated 17th December, 1901.

Claims:—

1. The herein described process of centrifugal filtration consisting of the product being fed into a revolving filter as A, whereby the solution is forcibly ejected and thereby separated from its associated solid matter substantially as herein explained and described.
2. In an apparatus for centrifugal filtration a rotatable basket open at top and bottom as A, and having a meshed or perforated peripheral face as A1, alone or in combination with an outer collection chamber as J, substantially as herein described and as illustrated in the accompanying drawings.
3. In an apparatus for centrifugal filtration a hollow drum as E for forming a central discharge space within its containing chamber as A, and provided with means consisting of the parts E2 to E4 and F to F4 for raising and lowering it on its central guide shaft as B3, substantially as herein described and illustrated in the accompanying drawings.
4. In an apparatus for centrifugal filtration a hand operated discharging device consisting of a knife as M1 to which a raising or lowering and a radial action is concurrently imparted by means of screw and bevil gear as L to L5 and worm gear as M3, the device being arranged pivot-wise so as to be swung out of the way, substantially as herein described and illustrated in the attached drawings.
5. In an apparatus for centrifugal filtration a filter rotating within its collection chamber and provided with a removable drum for effecting a central discharge space and with a discharging device, the whole working together in combination and mounted on a standard frame substantially as herein described and set forth and as illustrated in the attached drawings.

Specifications, 9s. 6d. Drawings on application.

Application No. 3886.—ALEXANDER DOUGLAS JONES, of Guildford, Western Australia, Contractor, "*A new and improved Acetylene Gas Generator.*"—Dated 3rd June, 1902.

Claims:—

1. In acetylene generators.—Feed water controlling device automatically operated by the rise and fall of the gas dome and consisting of a depressible rod as F1 which opens and closes the water admission valve as F4 by means of a counter-balanced connection as F3, such counter-balance returning the rod and valve to the shut off position concurrent with the release of the dome from off the rod F1 substantially as and for the purposes herein explained and as illustrated in the attached drawings.
2. In Acetylene Gas Generators.—A carbide chamber having a removable tray as C1 and with a gas proof seal door as C2 and C3 operated by the wheel and screw C4, the whole arranged so that the door may be easily removed in order to allow of a rapid charge and discharge of the carbide and exhaust carbide respectively, substantially as and for the purposes herein explained and as illustrated in the attached drawings.
3. The peculiar automatic feed water controlling device in combination with a carbide chamber and both in operative communication with a gas and water chambers as A and A1, the whole comprising one appliance, substantially as and for the purposes herein explained and as illustrated in the attached drawings.

Specification, 7s. 6d. Drawings on application.

Application No. 3925.—THE AUTOMATIC AERATOR PATENTS, LIMITED, of 14 Sherborne Lane, London, England (assignee FRANK GEORGE HAMPSON), "*Improvements in or relating to the Aeration and Bottling of Liquids.*"—Dated 2nd July, 1902.

Claims:—

1. In an apparatus for aerating liquids a receiver into which gas and liquid are supplied from separate sources and from which they are forced by the pressure therein into an aerating chamber or reservoir displacing an equal quantity of aerated liquid which passes to a delivery vessel from which it is discharged preferably after reduction of the pressure substantially as and for the purpose described.
2. In an apparatus for aerating liquids the combination with a receiver an aerating chamber and a delivery vessel or a bottling attachment of controlling mechanism so arranged that when a charge of aerated liquid is withdrawn from the apparatus fresh supplies of gas and liquid are admitted thereto from separate sources to form aerated liquid replacing the portion withdrawn substantially as described.
3. In an apparatus for aerating liquids the combination with a receiver an aerating chamber and a delivery vessel respectively, such as A, B, and C of valves controlling the separate supplies of gas and liquid to the receiver the inlet of the aerated liquid to the delivery vessel and the escape of gas from the receiver and delivery vessels substantially as and for the purpose described.
4. In apparatus for aerating and delivering quantities of liquids the employment of a chamber into which the liquid is admitted before passing to the receiver and in which it comes in contact with and is enriched before the aeration proper by the excess gas periodically delivered from the main apparatus so that any desired liquid pressure can be employed.
5. An apparatus for aerating liquids comprising a receiver into which gas and liquid are supplied from separate sources and from which the mixture is forced by the pressure into an aerating chamber passing thereafter to a vessel from which it is discharged preferably after a reduction of the pressure and a preliminary chamber in which the liquid before entering the receiver is subjected to the action of the excess gas discharged from the main apparatus the pressure in the preliminary chamber being sufficient to force the liquid into the receiver.
6. In an apparatus for aerating liquids the combination with a receiver into which gas and liquid are admitted from separate sources through valves D¹ and A¹ respectively of a non-return valve opened by the pressure in the receiver to permit the gas and liquid to pass to an aerating chamber and a valve controlling the escape of excess gas from the receiver substantially as and for the purpose described.

or aerating liquids the combination with an aerating receiver A with or without a delivery vessel C or a preliminary enriching chamber and valves controlled between the chambers and operated by a single manner that on the delivery of aerated liquid corresponding quantity of fresh liquid is allowed or substantially as described.

9. In an apparatus for aerating liquids the combination with an aerating chamber and a receiver B having perforated diaphragms of a receiver B having outlets and valves controlling successively the inlet to the receiver the delivery of the gas and chamber, and the escape from the receiver of the gas and liquid.

10. In an apparatus for aerating liquids the combination with an aerating chamber and a receiver A and a delivery vessel C of valves such as D¹ D² J¹ J² connected with the receiver and delivery vessel respectively and operated by a cam shaft H which also operates a valve O on the receiver substantially as and for the purpose described and illustrated in Figures 2 and 4 of the accompanying drawings.

11. In an apparatus for aerating liquids the combination with an aerating chamber and a receiver of a valve such as P on the receiver adapted to be closed by the pressure in the chamber and to be opened mechanically substantially as and for the purpose described.

12. In an apparatus for aerating liquids, the combination with an aerating chamber of a receiver and valves such as D¹, J¹, D¹⁰ or P, and J¹¹, acted upon by a single cam shaft or lever for controlling the inlet of gas to the receiver, the delivery of aerated liquid from the aerating chamber, and the escape of gas from the receiver, and the liquid delivered from the aerating chamber substantially as described.

13. In an apparatus for aerating liquids the combination with an aerating chamber, a receiver with or without a delivery vessel of valves and operating cams G¹ G² G³ carried by a single shaft H substantially as described.

14. In an apparatus for aerating liquids the combination with an aerating chamber B communicating with a receiver A and a delivery vessel C of valves such as D¹ D² J¹ J² connected with the receiver and delivery vessel respectively and operated by a cam shaft H which also operates a valve O on the receiver substantially as and for the purpose described and illustrated in Figures 2 and 4 of the accompanying drawings.

15. In apparatus for aerating liquids comprising an aerating chamber and a receiver with or without a delivery vessel the combination with a float valve such as P of a double valve such as S by which the gas is discharged either to the atmosphere or to a preliminary enriching chamber substantially as described.

16. In apparatus for aerating liquids the combination with an aerating chamber a receiver with or without a delivery vessel of a float or buoyant valve P and a double valve such as S S¹ substantially as and for the purpose described.

17. In apparatus for aerating liquids the combination with a receiver such as A and an aerating chamber such as B of valves such as P S S¹ and T and a spindle R for operating the valve P substantially as described.

18. In apparatus for aerating and bottling liquids the combination with a receiver into which gas and liquid are admitted from separate sources and from which they are forced by the pressure into an aerating chamber of a bottling attachment having a flexible rotatable or other part, substantially as described.

19. In apparatus for aerating liquids the combination with an aerating chamber such as B and a receiver such as A of a bottling device and valves controlling the delivery of a rated liquid through the bottling attachment to the bottle and the escape of excess gas therefrom, substantially as described.

20. In apparatus for aerating liquids the combination with an aerating chamber B and a receiver A of an attachment such as W Y or Y Z and valves such as D¹ J¹ J¹¹ and D¹⁰ or P, substantially as and for the purpose described.

21. The method or process of aerating liquids substantially as described.

22. The method or process of aerating and bottling liquids, substantially as described.

23. The complete bottling attachment substantially as described and illustrated in Figures 13 and 14 of the accompanying drawings.

24. The complete apparatus for aerating and supplying quantities of or bottling liquids, substantially as described or illustrated in Figure 1 or in Figures 3 to 6 or in Figures 7 and 8 or in Figures 9 to 12 of the accompanying drawings.

Specifications, £1 15s. Drawings on application.

Application No. 3948.—EDWIN PHILLIPS, of 533 Collins Street, Melbourne, in the State of Victoria, Commonwealth of Australia, Certified Patent Agent and Engineer (*Everard Steele*), "*Explosives and Methods of Making the same*."—Dated 16th July, 1902.

Claims:—

1. An explosive consisting of a mechanical mixture of nitrated phthalic acid and an oxidising agent, substantially as described.

2. An explosive comprising nitrated phthalic acid and chlorate of potash, substantially in the proportions specified.

3. An explosive consisting of grains, each of which comprise a main body portion and a complete coating, said body portion consisting exclusively of chlorate of potash and said coating consisting exclusively of an ingredient reacting explosively with the chlorate of potash, said ingredient being insoluble in water but soluble in a volatile liquid, whereby the grains of chlorate of potash are entirely protected from the action of moisture by a hardened coating of the ingredient, substantially as described.

4. An explosive consisting of grains, each of which comprises a body portion consisting exclusively of an oxidising agent, and a complete coating consisting exclusively of an ingredient reacting explosively with the oxidising agent, and insoluble in water but soluble in a volatile liquid, so forming a hardened coating around the grains of the oxidising agent, substantially as described.

5. An explosive consisting of grains, each comprising a body portion and a complete coating, the body portion consisting exclusively of one ingredient, and the coating exclusively of the other ingredient, said ingredients reacting chemically with violence, the latter being insoluble in water but soluble in a volatile liquid, substantially as described.

6. A process of making an explosive consisting of two ingredients which react chemically with violence, one of said ingredients being a substance insoluble in water but soluble in a volatile liquid which consists in forming the other ingredient into grains or small particles, dissolving in a volatile liquid the ingredient which is insoluble in water, coating the particles of the other ingredient with the latter ingredient so dissolved, and then evaporating the volatile liquid to leave a hardened coating of the latter ingredient on the other ingredient, substantially as described.

Specification, 7s. Drawings on application.

Application No. 3950.—THE AMERICAN TOBACCO COMPANY, of No. 111 Fifth Avenue, City, County, and State of New York, United States of America (assignees of KARL HARNISCH), "*Improvements in Machines for Forming Cigarette Tubes and the Cigarette Tubes formed thereby*."—Dated 16th July, 1902.

Claims, numbering 53, can be inspected at Patent Office.

Specification, £2 2s. 6d. Drawings on application.

Application No. 3951.—THE AMERICAN TOBACCO COMPANY, of No. 111 Fifth Avenue, in the City, County, and State of New York, United States of America (assignee of SRUL DAVID SCHOLOMOWITSCH RAKOWITZKY and SELMAN SRULEWITSCH DAVIDOWITSCH RAKOWITSKY), "*Machine for making Cigarette Wrappers with Mouth-pieces*."—Dated 16th July, 1902.

Claims, numbering 37, can be inspected at Patent Office.

Specification, £1 12s. Drawings on application.

Application No. 3952.—THE AMERICAN TOBACCO COMPANY, of No. 111 Fifth Avenue, in the City, County, and State of New York, United States of America (assignees of SRUL DAVID SCHOLOMOWITSCH RAKOWITZKY), "*Improvements in Machines for inserting cotton in Cigarette Wrapper Tubes*."—Dated 16th July, 1902.

Claims:—

1. The combination of means for feeding cotton to cutting means, means for cutting off a portion of the cotton fed thereto, and means for introducing such portion into a wrapper tube, substantially as described.

2. The combination of means for feeding a sliver of cotton to clamping means, clamping means for temporarily holding the end of the sliver while the feeding means are being withdrawn, means for severing a portion of such sliver, and means for inserting such portion into a wrapper tube, substantially as described.

3. The combination of means for feeding a sliver of cotton to clamping means, with such clamping means for holding the end of the sliver while the feeding means are being withdrawn, and means for cutting off a portion of such sliver, substantially as described.

4. The combination of means for feeding a sliver of cotton to clamping means, with such clamping means for holding the end of the sliver while the feeding means are being withdrawn, means for cutting off a portion of such sliver, means for inserting such portion into a wrapper tube and means for doubling back such portion upon itself before it is inserted in such wrapper tube, substantially as described.

5. The combination of means as trough 26 and spring 30 for feeding a sliver as cotton, means as 40, 41, for temporarily holding the free end of the sliver, means as shears 16, 18, for severing a portion of such sliver and means as a rod 32 for inserting such severed portion into a wrapper tube, substantially as described.

6. The combination of a reciprocating trough 26 and spring 30, with shears 16, 18, clamps 40, 41, a reciprocating rod 32, and a head having an aperture 48 in front of which the wrapper tube is held, substantially as described.

7. The combination of a reciprocating trough 26, and spring 30, shears 16, 18, clamps 40, 41, a reciprocating rod 32, reciprocating plates 20, 11, having cam grooves 21, 14, a stationary plate 36, with cam groove 35, a lever 4, a slotted bell crank lever 33, 37 and a cam 45, substantially as described.

Specification, 7s. 6d. Drawings on application.

Application No. 3959.—MARTIN ZOBEL, of Mount Victoria, in the State of New South Wales, in the Commonwealth of Australia, Miner, "*An Agitation Rolling Vat for the extraction of Gold and Silver from ores and other auriferous and argentiferous materials by cyanidation*."—Dated 22nd July, 1902.

Claim:—

An agitation rolling vat for the extraction of gold and silver from ores and other auriferous and argentiferous materials by cyanidation and the making and using of my said machine in the manner as hereinbefore substantially described.

Specification, 6s. Drawings on application.

Application No. 3960.—WILLIAM HENRY GORDON, of Lyons Street, South Ballarat, in the County of Grenville, in the State of Victoria, Blacksmith and Engineer, "*An improved Boss or Hub for fastening to a shaft any part of a machine that causes or is caused by the shaft to revolve*."—Dated 22nd July, 1902.

Claims:—

1. With hubs or bosses, a hub or boss that is more efficient for fastening to a shaft any part of a machine that causes or is caused by the shaft to revolve as described substantially in the manner set forth.

2. With hubs or bosses, a hub or boss that can be more easily fixed and adjusted to the shaft that it causes or is caused by to revolve as ascertained substantially in the manner set forth.

3. With hubs or bosses, a hub or boss that requires that no key-way need be cut into the shaft to which it is attached but will grip firmly and securely the plain smooth shaft which causes or is caused by to revolve as in the manner substantially set forth.

4. With hubs or bosses, a hub or boss that distributes the strain over a much greater surface of the shaft to which it is attached and which causes or is caused by to revolve as described substantially in the manner set forth.

5. With hubs or bosses, a hub or boss that will hold as firmly and also in as true a bed as a shrunken-on hub or boss of any part of a machine that causes or is caused by the shaft to revolve as ascertained substantially in the manner set forth.

Specifications, 2s. Drawings on application.

Application No. 3963.—JOHN SHEARER and DAVID SHEARER, both of Main Street, Mannum, in the State of South Australia, Commonwealth of Australia, Machinists, "*Improvements in and connected with lifting devices and awles of ploughs and other agricultural implements*."—Dated 23rd July, 1902.

Claims:—

1. In ploughs and other agricultural implements having a cranked axle a rack keyed or otherwise rigidly secured upon such axle substantially as described and for the purpose set forth.
2. In ploughs and other agricultural implements having a cranked axle a lifting lever pivoted upon such axle and capable of being oscillated thereon substantially as described and for the purpose set forth.
3. In ploughs and other agricultural implements having a cranked axle, in combination, a rack keyed or otherwise rigidly secured upon the crank axle, a lever pivoted upon the crank axle and carrying a spring dog adapted to engage the rack and move it in either direction, and a spring dog carried by the implement frame and adapted to engage the said rack and prevent it moving in either direction, substantially as described.
4. In ploughs and other agricultural implements having a cranked axle in two parts the improved box-shaped crank arm and gib and key whereby the two parts are connected together substantially as described.
5. In ploughs and other agricultural implements having a cranked axle in two parts the combined crank arm and rack centre substantially as described and for the purpose set forth.
6. In ploughs and other agricultural implements having a cranked axle, an independent shaft mounted in suitable bearings and connected to the cranked axle by suitable means such as sprocket wheels and chain, a rack keyed or otherwise rigidly secured upon the said shaft, a lever pivoted upon the said shaft and carrying a spring dog adapted to engage the rack and operate it in either direction, and a spring dog carried by the implement frame and adapted to engage the said rack and prevent it moving in either direction, substantially as described.
7. In ploughs and other agricultural implements having a cranked axle, and a rack secured upon such axle or upon an independent shaft connected to the cranked axle, the provision of a spring holding dog carried by the implement frame and adapted to prevent the rack from moving in either direction, said spring dog being disengaged when necessary from the rack by means of trip cranks and connections, one of such trip cranks being placed upon the footboard and one at the rear of the implement frame, substantially as described.
8. In ploughs and other agricultural implements having a rack secured to the cranked axle or to an independent lever shaft connected thereto, the provision of a spring holding tooth adapted to be disengaged by means of a trip crank pivoted at the rear of the implement frame substantially as described.

Specifications, 6s. 6d. Drawings on application.

Application 3976.—ARTHUR ALLWOOD SPENCER SMITH, of Aberdeen, in the State of New South Wales, Postmaster, "An improved Seal Lock, specially adapted for Mail Bags."—Dated 30th July, 1902.

Claims:—

1. A seal lock comprising a box portion containing a pair of snap springs and a lever, a cam device for opening out the same, a slot through the top plate of the box for said lever, a flap plate folding down over said box top plate to hold down a seal over the lever slot, and a stud-like hasp piece attached to said flap D adapted to engage with a strap binding flap or equivalent contrivance and to be held locked by the snap springs, substantially as described.
2. The herein described construction of seal lock wherein the opening lever is closed down below a seal which must be broken to obtain access to it after the lock is closed, of a hasp swinging from said seal plate adapted to be engaged by snap springs within the lock which cannot be opened except by lifting the lever up through the seal so as that the seal will be mutilated before the lock can be opened, substantially as described.
3. In a seal lock, the combination of the box portion A carrying snap springs P and a cam and lever for operating same, and an upper and a lower flap, the one for holding a strap or other fastening, and the other for securing down over the lever a seal to prevent the lifting of the lever to open the springs without first mutilating the seal, substantially as described.
4. In a seal lock, the combination with the other operative parts set forth, of a flap plate D adapted to hold down a seal over the lever P to prevent the lifting of the same, and carrying an end flap portion C upon which or through which a stud-like hasp is passed to engage with springs P, said flaps D and C being so constructed at the edges relatively to the box A as to prevent the insertion of a picking tool, substantially as described.
5. In a seal lock, the combination with flap portions co-operating with locking mechanism substantially in the manner described, of a pair of snap springs P and a cam and lever within the body of the lock, said lever being capable of being raised through the casing of the lock to open out the springs as soon as the seal has been broken through, substantially as described.
6. In a seal lock, the combination with a body portion containing locking mechanism, of a strap flap and a seal flap co-operating therewith, substantially as described, of a hasped yoke whose head passes through the flaps and box and is engaged by springs within the latter, so as to be incapable of being opened until the seal has been broken through, substantially as described.
7. In a seal lock of the kind described, the specific construction of locking mechanism and flaps co-operating with a locking hasp as described herein and shown in the accompanying drawings.

Specification, 7s. 6d. Drawings on application.

R. G. FERGUSON,
Registrar of Patents.

Patent Office, Perth,
8th August, 1902.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten Shillings (10s.) is payable with such notice.

For particulars of claims, vide Gazette No. 32, 8th August, 1902.

Application 3931.—THOMAS DANIELLS MERTON, of the Spottiswoode Refinery and Metallurgical Works, Spottiswoode, near Melbourne, in the State of Victoria, and Commonwealth of Australia, Metallurgist, "Improved Rotary Rabbling Apparatus for Ore Roasters."—Dated 8th July, 1902.

Specification, 4s. Drawings on application.

Application No. 3932.—GEORGE GARIBALDI TURRI, of Salisbury Building, Queen Street, Melbourne, in the State of Victoria, Patent Agent (Thomas Hammill Hicks), "Improvements in apparatus for Separating Mercury and Amalgam from Ore Pulp."—Dated 8th July, 1902.

Specification, 6s. 6d. Drawings on application.

Application No. 3933.—GEORGE GARIBALDI TURRI, of Salisbury Building, Queen Street, Melbourne, in the State of Victoria, Patent Agent (Thomas Hammill Hicks), "Improvements in processes for Recovering Gold from Refractory Ores in the form of Amalgam."—Dated 8th July, 1902.

Specification, 17s. Drawings on application.

Application No. 3934.—GEORGE GARIBALDI TURRI, of Salisbury Building, Queen Street, Melbourne, in the State of Victoria, Patent Agent (Thomas Hammill Hicks), "Improvements in Apparatus for Separating Mercury from Amalgam."—Dated 8th July, 1901.

Specification, 7s. Drawings on application.

Application No. 3935.—GEORGE GARIBALDI TURRI, of Salisbury Building, Queen Street, Melbourne, in the State of Victoria, Patent Agent (Thomas Hammill Hicks), "Improvements in ore concentrators."—Dated 8th July, 1902.

Specifications, 10s. Drawings on application.

Application No. 3936.—GEORGE GARIBALDI TURRI, of Salisbury Building, Queen Street, Melbourne, in the State of Victoria, Patent Agent (Thomas Hammill Hicks), "Improvements in rotatable Single Ball Ore-pulverising Apparatus."—Dated 8th July, 1902.

Specification, 4s. Drawings on application.

Application No. 3937.—LOUIS CARNEGIE AULDJO, of Equitable Building, George Street, Sydney, in the State of New South Wales, Consulting Engineer, "Improvements in Steam Boilers."—Dated 8th July, 1902.

Specification, 11s. 6d. Drawings on application.

Application No. 3945.—JOHN COWAN, of 2 St. Andrew's Square, Edinburgh, Scotland, Managing Director of the Stirling Boiler Company, Limited, "Improvements in Water Tube Boilers."—Dated 15th July, 1902.

Specification, £1. Drawings on application.

Application No. 3968.—THOMAS HERBERT, of Brighton Road, Remuera, in the Provincial District of Auckland, and Colony of New Zealand, Manufacturer, and FRANK JAGGER, of Arney Road, Remuera aforesaid, Merchant, "An improvement in Ping Pong bats."—Dated 29th July, 1902.

R. G. FERGUSON,
Registrar of Patents.

Patent Office, Perth,
2nd August, 1902.

NOTICE is hereby given that the undermentioned Application for the Grant of Letters Patent, and the complete Specification annexed thereto, has been accepted, and is now open to public inspection at this Office.

Any person or persons intending to oppose this application must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten Shillings (10s.) is payable with such notice.

For particulars of claim, vide Gazette No. 32, 8th August, 1902.

Application No. 3954.—WILHELM BÖTTCHER, Engineer, and RUDOLF ALFRED FRIEDRICH, Merchant, both of Perth, Western Australia, "A new and improved method to extract all fine gold, which is contained in the material or stuff commonly known as 'Kanowna pug,' and in materials of a like nature or character, such as clay, steatite, and others."—Dated 17th July, 1902.

Specification, 1s. 6d.

R. G. FERGUSON,
Registrar of Patents.

Patent Office, Perth,
1st August, 1902.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten Shillings (10s.) is payable with such notice.

For particulars of claims, vide Gazette No. 31, 1st August 1902.

Application No. 3543.—ARTHUR CONSTANT AUCHER, of Bank Street, South Brisbane, in the State of Queensland, Commonwealth of Australia, Bachelor of Arts, "An improved Burner and Mantle for Incandescent Gas Lighting."—Dated 17th September, 1901.

Specification, 3s. 6d. Drawings on application.

Application No. 3953.—THE VACUUM CLEANER COMPANY, LIMITED, of 25 Victoria Street, in the County of London, England (assignee of Herbert Cecil Booth), "Improvements relating to the Extraction of Dust from Carpets and other materials."—Dated 16th July, 1902.

Specifications, 15s. Drawings on application.

Application No. 3958.—PERCY HERBERT DANDO, of Whangarei, in the Colony of New Zealand, Cabinet-maker, "Improvements in Chamber Utensils and attachments therefor."—Dated 21st July, 1902.

Specification, 3s. 6d. Drawings on application.

Application No. 3961.—PHILIP RAYSON, of Orrong Road South, Elsternwick, in the State of Victoria, Engineer, "Improvements in Spanner Attachments."—Dated 22nd July, 1902.

Specification, 4s. 6d. Drawings on application.

Application No. 3962.—MATTHEW BERNARD SILK, of 82 King Street, Sydney, in the State of New South Wales, Tailor, "An apparatus for Shrinking Cloth and other fabrics."—Dated 22nd July, 1902.

Specification, 3s. Drawings on application.

Application No. 3965.—WALTER LEITCH, of Wattle Tree Road, Malvern, in the State of Victoria, Merchant, "Improvements in the manufacture of Sweetmeats and the like."—Dated 26th July, 1902.

Specification, 5s. 6d. Drawings on application.

R. G. FERGUSON,
Registrar of Patents.

Patent Office, Perth,
25th July, 1902.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose any of such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the first appearance of this advertisement in the Western Australian Government Gazette. A fee of Ten shillings (10s.) is payable with such notice.

For particulars of claims, vide Gazette No. 30, 25th July, 1902.

Application No. 3583.—JULIUS PAUL KERNBAUM, of 19 Nicholson Street, South Yarra, in the State of Victoria, Bootmaker, "Improvements in Locks for mail bags and cognate purposes."—Dated 8th October, 1901.

Specifications, 11s. 6d. Drawings on application.

Application No. 3586.—GEORGE ANDREW, of No. 88 Barkly Street, Carlton, in the State of Victoria, Commonwealth of Australia, Joiner, "Improved Cash Register and Indicator."—Dated 8th October, 1901.

Specification, 8s. 6d. Drawings on application.

Application No. 3599.—WALTER SKELTON, of the Broadway, Dunolly, in the State of Victoria, Commonwealth of Australia, Importer, "Improvements in a Combination Water-bag and Extension Cool Chamber or Chambers."—Dated 17th October, 1901.

Specifications, 6s. Drawings on application.

Application No. 3761.—CHARLES EDWARD NICHOLAS, of "Athelstone," Denham Street, Hawthorn, in the State of Victoria, Commonwealth of Australia, Engineer, "Improved Steam Condenser."—Dated 4th March, 1902.

Specification, 3s. Drawings on application.

Application No. 3913.—JAMES HENRY SOUTHCOTT, of 196 Gilles Street, Adelaide, in the State of South Australia, in the Commonwealth of Australia, Engineer, "Improvements in the Manufacture of Trough Linings for Saddle-trees."—Dated 27th June, 1902.

Specification, 3s. 6d. Drawings on application.

Application 3914.—WILLIAM WATTIE, citizen of the United States, residing at Worcester, County of Worcester, State of Massachusetts, United States of America, Mechanical Engineer, "Improvements in Straw Matting, and Looms for making the same."—Dated 27th June, 1902.

Specification, 16s. Drawings on application.
