Note.—Throughout this Gazette the names in Italics within parentheses are those of Communicators of Inventions.

Complete Specifications.

Patent Office, Perth,
18th March, 1904.

NOTICE is hereby given that the undermentioned Applications for the Grant of Letters Patent, and the complete Specifications annexed thereto, have been accepted, and are now open to public inspection at this Office.

Any person or persons intending to oppose such applications must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the date of this Gazette. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 4729.—WILLIAM HUMBLE, THOMAS STRONG HUMBLE, WILLIAM HENRY HUMBLE, and GEORGE BLAND HUMBLE, of the Vulcan Foundry, Little Malop Street, Geelong, in the State of Victoria, Australia, Ironfounders, "*An improved Floor Cramp.*"—Dated 8th December, 1903.

Claims:—

1. An improved floor cramp having a sliding rack bar, a pair of operating pawls mounted in a rocker and means of clamping said cramp to the joist substantially as set forth and illustrated.

2. In a floor cramp, and in combination a sliding rack bar in a groove in the top of the bed plate, a rocker pivotally mounted on a pair of cheeks, a handle for said rocker, and a pair of pawls pivoted one above and one below the spindle of said rocker substantially as set forth and illustrated.

3. In a floor cramp an adjustable eccentric lever pivotally mounted in a lateral slotted lug having teeth on its upper surface engaging corresponding teeth on the underside of a retaining block held in position by a wing nut substantially as set forth and illustrated.

Specification, 5s.

Application No. 4819.—FREDERICK LIVINGSTONE, of No. 36 Mark Lane, in the City of London, England, Merchant, "*Method and apparatus for preparing a Food for Cattle and other animals.*"—Dated 4th March, 1904.

Claims:—

1. A food for cattle and other animals composed of peat in a finely divided state and molasses or similar saccharine liquids, with or without the addition of other substances or liquids substantially as set forth.

2. The process for preparing food or fodder for animals, consisting in mixing molasses or other saccharine liquids with peat products, alone or mixed with other forage or food materials, substantially as set forth.

3. The process for preparing food or fodder for animals consisting in mixing molasses or other saccharine liquids with peat products mixed with yeast or brewers' refuse, dried or desiccated, if desired, substantially as set forth.

4. The process for preparing food or fodder for animals consisting in mixing molasses or other saccharine liquids with peat products mixed with yeast or brewers' refuse, dried or desiccated, if desired, and also with dried or desiccated separated milk, substantially as set forth.

5. Apparatus for the manufacture of the food herein described, comprising a heated storage tank for the molasses, a heated agitator vessel, and a heated closed receptacle for the molasses, and a disintegrator and sieve for the peat, means for leading the treated molasses and the treated peat into a mixer conveyor, wherein the ingredients of the food become thoroughly mixed, substantially as described and shown.

6. The complete apparatus for manufacture of the food herein described as shown on the drawing.

Specification, 9s. Drawings on application.

Application No. 4820.—OSWALD LOFFLER, Manufacturer, of Vienna (Austria), XVIII. Wahringergruel 81, and Dr. WILHELM WEIDLE, Manufacturer, of Vienna, in the Empire of Austria, IV. Alleegasse 35, "*Improvements in Filters in which the liquid to be filtered is sucked through filtering bodies.*"—Dated 4th March, 1904.

Claims:—

1. A suction-filter the filtering chamber of which is formed by two plates *a* of filtering material and a washer, packing ring or the like, *b* which is arranged between the said plates and through which passes a tube connected to the suction pipe, the said plates being pressed against the washer by suitable means.

2. The form of the suction-filter described in Claim 1 in which the frames form a casing of which the walls opposite the filtering plates are perforated for the passage of liquid and so shaped that spaces are formed between them and the said plates.

3. A form of the filter described in Claims 1 and 2 specially adapted for pocket use, in which the casing consists of a flat cylindrical part *c* for the reception of the filter plates and the packing ring, provided with a socket or union *l* for the suction tube and with a cylindrical screw cover *i*, the packing ring being arranged round a metal ring *k* adapted to press the packing ring against the cylindrical wall of the casing and provided with a short out-flow tube *j* which extends through the metal ring and the packing ring into the union *l*.

Specification, 5s. Drawings on application.

R. G. FERGUSON,

Registrar of Patents.

Renewal Fees paid on Patents registered from the 5th to 12th March, 1904.

Fees payable before the end of the seventh year in respect of the seven following years:—

No. 1579.—Muirhead, A.

No. 1580.—Taylor, H. A.

Fees payable before the end of the fourth year in respect of the three following years:—

No. 2898.—Dannhardt, F. H., and Mailer, M.

No. 2931.—Brown, S. G.

Subsequent Proprietor of Patent registered from 5th to 12th March, 1904.

[NOTE.—The name in brackets is that of former proprietor.]

No. 3672.—Potter's Sulphide Ore Treatment, Limited [Potter, C. V.]

Application abandoned.

Application No. 4411.—CHARLES HAMILTON HOGG, of Burt Street, Boulder, Western Australia, Auctioneer, "*Improved Combination Chair, convertible for rocking, swinging, reclining, and other similar purposes.*"—Dated 7th May, 1903.
