* Estimated.

On the assumption that the mean population for the year 1907 will be 265,000, and that the apparent requirements of wheat for food per head of population will be 7.9 bushels, the total amount required for food during 1907 will be 2,093,500 bushels.

To this must be added the quantity of seed to be sown for grain and hay during the season, which, on the basis of the experience of recent years, may be roughly estimated at 426,000 bushels.

The total amount of wheat required by this State during 1907 will thus be 2,519,500 bushels. According to the preliminary wheat returns for the present season, it appears that the aggregate wheat yield for the whole State is approximately 2,309,354 bushels, thus leaving only 210,146 bushels of wheat, or its equivalent in flour, that it will be necessary to obtain from outside sources. This may be summarised as follows :—

ESTIMATES FOR 1907.	
Mean population	265,000
Consumption per head of wheat for food	7.9 bushels
Total food requirements	2,093,500 "
Seed requirements	426,000 "
Gross requirements for food and seed	2,519,500 bushels
Preliminary returns of wheat production for season ended February, 1907	2,309,354 "
Estimated requirements from outside sources	210,146 bushels
