PLANT DISEASES ACT, 1914-1956.

Department of Agriculture,
Perth, 13th August, 1958.

Agric. 613/57, Ex. Co. No. 1554.

HIS Excellency the Lieutenant-Governor and Administrator in Executive Council, pursuant to the provisions of the Plant Diseases Act, 1914-1956, has been pleased to make the regulations set out in the Schedule hereunder.

G. K. BARON HAY,
Director of Agriculture.

Schedule.

Regulations.

1. (1) These regulations may be cited as the Plant Diseases (Banana) Regulations, 1958.

(2) These regulations shall not be construed as affecting the provisions of any other regulations made under the Plant Diseases Act, 1914, as amended.

2. The regulations prescribed in the Proclamation dated the 28th August, 1947, and published in the *Government Gazette* on the 5th September, 1947, and amended by notice published in the *Government Gazette* on the 7th January, 1949, are revoked.

3. No person shall, either as principal or agent or in any other capacity, bring or cause to be brought into Western Australia, any bananas from any of the following States of the Commonwealth of Australia, that is to say, Victoria, New South Wales, South Australia and Queensland, during the period 1st May to 30th November in any year unless—

- (a) the bananas shall have been treated with or dipped in a fungicide containing Salicylanilide, on the plantation in which they were grown, in accordance with the standard recommendations to control *Nigrospora Sphaerica* ("Squirter") adopted in the State where the bananas were grown;
- (b) all cases packed with bananas so treated or dipped shall have stencilled on one end thereof the name of the fungicide followed by the word "treated" or "dipped" as the case may be.

4. (1) All bananas imported during the period 1st May to 30th November in each year shall be subject, on arrival, to a test by an inspector to determine whether the provisions of paragraph (a) of Regulation 3 have been complied with.

(2) If the test reveals that the bananas have not been treated with or dipped in a fungicide containing Salicylanilide the bananas shall, by direction of an inspector, be immediately destroyed or caused to be destroyed by the importer or returned by the importer to the consignor or consignors.

(3) The test shall be carried out in the manner prescribed in the Schedule to these regulations.

5. Any person who commits a breach of these regulations shall be guilty of an offence and shall be liable on conviction to a penalty not exceeding twenty-five pounds.

Schedule.

The test described in this Schedule, when applied to the skins of bananas, enables the detection of the presence of Salicylanilide as a result of previous treatment or dipping.

The test is a simple colourimetric test depending upon the reaction of Salicylanilide with 4 amino-antipyrine in the presence of potassium ferricyanide in alkaline solution to form a red dye.

The Kit Required for Field Testing.

The following kit of apparatus and reagents is required:—

1. Cotton wool—2-3 oz.
2. Reagent A-acetone— $\frac{1}{2}$ pint.
3. Reagent B-sodiumcarbonate, 0.045% solution—5 pints.
4. Reagent C-4 amino-antipyrine, 2% solution contained in a small dropping bottle—50 mls.
5. Reagent D-potassium ferricyanide, 4% solution contained in a small dropping bottle—50 mls.
6. Glass bottles with stoppers and wide mouths, 2 fluid oz. capacity with a graduated mark at the 1 fluid oz. level.

The concentration of the reagent solutions with the exception of Reagent B (sodiumcarbonate) are only approximate. Sodiumcarbonate should be as close to .045% as possible.

Testing Procedure.

1. Swab the exterior of a few bananas selected with a small pad of cotton wool moistened with Reagent A.
2. Place the swab in a test bottle.
3. Add Reagent B to 1 fluid oz. level.
4. Add 10 drops Reagent C.
5. Stopper bottle and shake thoroughly.
6. Add 10 drops Reagent D.
7. Stopper bottle and shake thoroughly.
8. Observe colour produced after a few minutes' standing. Pink to red indicates that Salicylanilide is present. Green to yellow indicates Salicylanilide is absent.

The test bottles should be rinsed with water between tests to avoid contamination from any previous test.

The quantities of reagents quoted are sufficient for 100 tests.

The reagents should remain effective for a considerable period of time if stored in a box when not in use, so as to avoid undue exposure to light. They should, however, be checked from time to time by performing the test with both dipped and undipped bananas.
