Complete Specification.

Patent Office, Perth,
14th November, 1902.

NOTICE is hereby given that the undermentioned Application for the Grant of Letters Patent, and the complete Specification annexed thereto, has been accepted, and is now open to public inspection at this Office.

Any person or persons intending to oppose such application must leave particulars, in writing, in duplicate (on Form D), of his or their objections thereto, within two calendar months from the date of this *Gazette*. A fee of Ten shillings (10s.) is payable with such notice.

Application No. 4080.—HENRY BLAND, of Ashley Street, Waverley, near Sydney, in the State of New South Wales and Commonwealth of Australia, Engineer, "*Improvements in apparatus for Elastic Fluid Compression.*"—Dated 9th October, 1902.

Claims:—

1. In apparatus for elastic fluid compression the combination with two sets of toggle levers coupled together, of a free or floating beam receiving motion therefrom and transmitting it to the compressing pistons, substantially as hereinbefore described and explained.

2. In apparatus for elastic fluid compression the combination with a free beam operated by two sets of toggles coupled together, of balanced supports for the beam free to rise and fall in framing to suit the varying plane of lever joints, substantially as hereinbefore described and explained.

3. In apparatus for elastic fluid compression the combination with a free beam and its yielding supports, of two sets of toggle levers, whose power can be utilised up to their exhaustion, substantially as hereinbefore described and explained.

4. In apparatus for elastic fluid compression the combination with a free beam and its yielding supports, of toggles operating the same by an overstep movement towards the vertical centre to complete the compression stroke, substantially as hereinbefore described and explained.

5. In apparatus for elastic fluid compression the combination with an oscillating free beam, of two sets of toggle levers coupled together and working as followers, the upper lever of each set being pivoted to the said beam, the lower levers taking their thrust from the foundation, substantially as hereinbefore described and explained.

Specification, 5s. Drawings on application.

R. G. FERGUSON,
Registrar of Patents.

Subsequent Proprietor of Patent registered from 1st to 8th November, 1902.

[NOTE.—The name in brackets is that of former proprietor.]

No. 3557.—Fletcher, Russell, and Company, Limited
[Hurst, D.]

Applications for Patents.

NOVEMBER 1st—8th.

[Where Provisional Specification accompanies Application an asterisk is affixed.]
