10. Application of GDA to certain instruments

- (1) A reference (a *GDA reference*) in an instrument under the Act or these regulations that comes into force on or after the commencement day to the position on the surface of the Earth of a graticular section or block is to be made by reference to —
 - (a) the GDA; and

- (b) coordinates of latitude and longitude calculated to 3 decimal places of a second.
- (2) An instrument under the Act or these regulations referred to in subregulation (1) that contains a GDA reference is to be endorsed with a statement to the effect that the GDA applied to the calculation of the coordinates of latitude and longitude relevant to the GDA reference, but the omission of such a statement does not affect the validity of the instrument.
- (3) Despite section 17 of the Act, for the purposes of subregulation (1) —
 - (a) the meridians of longitude defining the eastern and western boundaries of a graticular section; and
 - (b) the parallels of latitude defining the northern and southern boundaries of a graticular section,

may be taken to be at a distance from each other that is other than 5 minutes.

- (4) In subregulation (1) —
commencement day means the day on which section 8 of the *Acts Amendment (Australian Datum) Act 2000* comes into operation³.

[Regulation 10 inserted in Gazette 15 December 2000 pp. 7217-18.]

11. Application of Australian Geodetic Datum

- (1) Subject to regulation 10, the AGD is the prescribed datum for the purposes referred to in —
 - (a) section 10(5) of the Act (which refers to the determination of the position on the surface of the Earth of the boundary of the area described in Schedule 2 to the Act); and

- (b) section 17(4) of the Act (which refers to the determination of the position on the surface of the Earth of a graticular section or a block).
- (2) The AGD is defined by an ellipsoid having a semi-major axis (equatorial radius) of 6 378 160 m and a flattening of 1/298.25 and fixed by the position of the origin being the Johnston Geodetic Station in the Northern Territory of Australia.
- (3) The Johnston Geodetic Station is taken to be situated at —
- (a) 25° 56' 54.5515" south latitude and 133° 12' 30.0771" east longitude; or
- (b) where decimal reckoning is used, 25° 56.90919' south latitude and 133° 12.50129' east longitude,
- and to have a ground level elevation of 571.2 m above the ellipsoid referred to in subregulation (2).
- (4) An instrument in force under the Act or these regulations immediately before the commencement day that contains a reference to the position on the surface of the Earth of a point, line or area determined by reference to the AGD is to be endorsed, if it is practicable to do so, with a statement to the effect that the AGD applied to that determination, but the omission of such a statement does not affect the validity of the instrument.
- (5) If, in relation to an instrument referred to in subregulation (4), coordinates calculated by reference to the AGD are to be converted to coordinates calculated by reference to the GDA, the conversion is to be made using the National Transformation Version 2 (NTV2) grid file transformation.
