67A. Conditions for construction and installation of pipelines

Standard conditions for construction and installation of pipelines for transmission of liquids derived from petroleum, coal and shale on and from jetties to storage tanks: —

- (1) This regulation applies to pipelines for the transmission of inflammable liquid, liquids derived from petroleum, coal or shale and liquids having a flash point less than 61° Celsius from the point of discharge from or intake of the vessel to or from the storage point.
- (2) The various directions and requirements contained in these conditions shall be read as addressed to the owner of the pipelines, valves, hoses or other appliances except where specifically stated otherwise, and he shall be entirely and solely responsible for their full and complete observance.
- (3) Any proposal for the construction or installation of a pipeline on and from any jetty shall be submitted to the Department together with full specifications and details and such construction or installation shall not be commenced and no jetty shall be used for that purpose except by licence from the Minister or Chief Executive Officer.
- (4)(a) When an existing pipeline is to be relaid or renewed, or any major repairs are to be effected, such pipeline or such section thereof as the Department may determine shall be classified as a new pipeline and shall conform to this regulation.
- (b) Major repairs include any repairs or alterations involving welding.
- (5) Where the Department is of the opinion that it is in the interest of public safety so to do it may by notice in writing given to the owner of a pipeline require such owner to relay, renew or repair such pipeline in such manner and within such time as the notice requires.

Jetties Regulations 1940

Part 1 Regulations applying to jetties controlled by the Department

Division 10 Miscellaneous

r. 67A

- (6) Pipelines, valves, flanges and fittings shall comply with the relevant requirements of British Standards, British Institute of Petroleum Safety Codes, American Petroleum Institute Specification for Line Pipe or other specifications approved by the Department.
- (7) Joints in pipelines shall be welded wherever practicable, and otherwise shall be made with flanged ends or other means approved by the Department.
- (8) Where pipelines are supported by a wharf, they shall be secured in an adequate manner, proper provision being made for expansion movement and anchorages.
- (9) Where valves and outlets in pipelines are placed below the deck of a wharf, access openings, with covers, shall be provided to them.
- (10) Pipelines on wharves shall be fitted with a stop valve at the outer or seaward end, and an approved non-return valve shall be placed immediately behind the connections between the flexible hose and the shore pipeline. Where required by the Department an approved non-return valve shall be placed in the pipeline at the shore end of the wharf or at the shore end of a submarine pipeline. Subject to the approval of the Department the requirement of a non-return valve at the seaward end of the pipeline may be dispensed with, if the distance from the outer or seaward end of the line to the non-return valve on shore does not exceed 15 metres.
In special circumstances, and as approved in writing by the Department, a non-return valve may be by-passed by the installation of a rising spindle gate valve connected to an approved branch line for "Go-Devil" or product separation device operation and back loading. This valve must be kept closed and locked except when the pipeline is to be cleared of contents or back loading is taking place or the operations are such as to require insertion of a product separation device.

- (11) Rising spindle gate valves of a type approved by the Department shall be used at pipeline control points.
- (12) Pipelines used for the transmission of inflammable liquid with a flash point less than 61° Celsius shall be suitably bended and earthed in a manner approved by the Department. A suitably designed cathodic protection system may be accepted for the purpose of this paragraph.
- (13) The seaward end of pipelines and hoses left connected thereto on wharves shall be made liquid-tight by fitting with either blank flanges properly secured and fastened by at least 4 bolts, or screwed caps.
- (14) Pipelines and the control valves shall be marked as required by the Department.
- (15) Pipelines not situated on wharves shall be laid above ground wherever possible and shall be properly supported at a height of not less than 160 millimetres above ground, but shall not rest directly on wood.
- (16) Pipelines shall receive adequate protection against corrosion and other injury.
- (17) If so required by the Department any pipeline laid under water shall be afforded cathodic protection in an approved manner.
- (18) Pipelines laid under railway tracks, roads or streets, or where they may be subjected to heavy loading, shall be installed in accordance with the plans and specifications of the “Recommended practice on form of agreement and specifications for pipelines crossings under railroad tracks” issued by the American Petroleum Institute (A.P.I. Code No. 26) or other specification or proposal in regard to sleeving or culverting approved by the Department.
- (19) Pipelines laid in ground, the surface of which is subject to loading of vehicular traffic, shall have at least 610 millimetres of approved cover over the top of the

pipe, excluding flanges; proper access pits, with covers, shall be provided for valves, and flanged joints shall be readily accessible.

- (20) When first installed, pipe lines shall be tested to a pressure of 2 megapascals with water in sections over the full length of the pipeline, each section not exceeding distance between consecutive flanged joints, and full pressure shall be maintained for the period of each test with a minimum period of 30 minutes.
- (21) Provision shall be made to relieve excessive pressure due to temperature variations in pipelines left full of liquid.

[Regulation 67A inserted in Gazette 17 Mar 1960 p. 779; amended in Gazette 28 Sep 1960 p. 2987; 16 Sep 1963 p. 2829; 15 Jun 1973 p. 2237 (erratum 13 Dec 1974 p. 5344); 30 Dec 2004 p. 6953.]

67B. Maintenance and operation of pipelines

Maintenance and operation of pipelines for transmission of liquids derived from petroleum, coal and shale on or from jetties to storage tanks:—

- (1) Underground pipelines between the wharf and the storage tanks shall be examined by the owner at intervals not exceeding 3 years and a certificate forwarded to the Department that the pipelines are in good order and condition and such certificate shall state the basis on which it is issued, *e.g.*, visual examination, pressure tests or metal thickness tests.
- (2) Valves and other appliances used during pumping operations shall be inspected to ensure certainty of operation on each occasion before pumping commences.
- (3)(a) Flexible hoses used in connection with the pumping of liquids derived from inflammable liquid, liquids derived from petroleum, coal or shale and liquids having a flash point less than 61° Celsius to or from a vessel shall be of

approved quality with a safe working pressure of at least 700 kilopascals.

- (b) Such flexible hoses shall be fitted with Turk's heads of hemp or sisal rope, or other approved means of protection at intervals of one metre.
- (c) The number of the hose, the safe working pressure and the ownership thereof, shall be indicated on each such flexible hose, by means of an engraved metallic plate incorporated in and forming part of such hose, or in such other manner as may be approved by the Department.
- (d) To prevent the flow of direct current between ship and pipeline an insulating flange shall be fitted in the shore pipeline, or one easily identifiable, non-conductive hose inserted in the hose string and the insulating flange or non-conductive hose, as the case may be, shall comply in all respects with the Association of Australian Port and Marine Authorities, Rules for the Handling of Dangerous Goods and Oils in Ports, Part 5.
- (4) Flexible hoses used in connection with the pumping of liquids derived from inflammable liquid, liquids derived from petroleum, coal or shale and liquids having a flash point less than 61° Celsius to or from a vessel shall be tested under working conditions at intervals of not more than 6 months to at least 25% in excess of the actual maximum working pressure under which it is operated and the results of such test shall be recorded in a register to be kept by the owner and such record shall be made available for examination by the Department as required. A report on tests of hoses used by an owner shall be provided to the Department in January and July of each year. Such flexible hoses shall be properly and adequately supported to prevent chafing and kinking during pumping operations.
- (5) Pipelines used in connection with the pumping to or from a vessel of liquids derived from inflammable liquid, liquids derived from petroleum, coal or shale and

Jetties Regulations 1940

Part 1 Regulations applying to jetties controlled by the Department

Division 10 Miscellaneous

r. 67B

liquids having a flash point less than 61° Celsius and unrefined crude petroleum, shall be provided with drip trays or drums under the seaward end of the pipeline of a type approved by the Department.

- (6) Pipelines and fittings shall be inspected each time before use in loading or discharge and tested to a pressure 25% in excess of normal operating pressure at 3 monthly intervals.
- (7) Electrical equipment on oil wharves or located within 15 metres of shore terminal valves in pipelines shall comply with the appropriate section of the Wiring Rules of the Standards Association of Australia and the requirements of the proper local electrical authority, and shall be inspected at intervals of not more than 6 months to ensure their continued compliance with such rules or requirements.
- (8) Pipelines for transmission of inflammable liquid with a flash point less than 61° Celsius shall be tested at intervals of not more than 12 months to ensure that they are suitably bonded and earthed as required by the Department.
- (9) At the commencement of pumping of inflammable liquids having a flash point less than 61° Celsius, and after each change of grade of liquid at which water clearance is employed, the velocity in the pipelines shall be restricted to a maximum of one metre per second for a period of 30 minutes, or sufficient time to clear the pipeline twice, whichever is the longer, but where a change of grade of inflammable liquid is made by face to face pumping or short water plug separation the velocity need not be so restricted.
This slow pumping rate shall also be observed when filling empty tanks until the fill pipe is covered. When pipelines vary in bore, the limiting rate shall be applied to that part having the smallest bore.

- (10) During pumping operations, pipelines shall be regularly patrolled throughout their full length so that any leakage may be detected.
- (11) During the whole period of pumping operations, the terminal valves on wharf or jetty, and the delivery or control valve on the vessel, shall be closely watched by competent persons who shall close the valves in the event of any untoward occurrence.
- (12) Pipelines, valves, hoses and other appliances used for transferring inflammable liquids with a flash point less than 61° Celsius shall be maintained free from leakage and gas-tight and, unless otherwise authorised by the Department, on the completion of loading or unloading shall be thoroughly freed of inflammable liquid and the hoses disconnected from the shore pipelines. Pipelines, valves, hoses and other appliances used for transferring oil with a flash point not less than 61° Celsius shall be kept in good condition and free from leakage and all due precautions shall be taken to prevent any oil escaping into tidal water.
- (13) Necessary precautions shall be taken to ensure that boats, barges or other small craft shall not moor under or remain near the wharf where pumping operations are being carried out.
- (14) No naked light, matches or other source of ignition shall be brought within a distance of 15 metres of shore terminal valves when pumping operations are being carried out, and any torch used shall be of flame-proof construction, and any artificial light used shall also be of flame-proof construction unless mounted at least 7.5 metres above the level of the wharf, when it shall be of a type approved by the Department.
- (15) A reliable watchman or watchmen shall be stationed in the vicinity of the vessel during pumping operations and such watchman or watchmen shall be persons approved by the Department and in such number as it may require.

Jetties Regulations 1940

Part 1 Regulations applying to jetties controlled by the Department

Division 10 Miscellaneous

r. 67B

- (16) A responsible representative of the Master of a vessel and a representative of the installation to which or from which the inflammable liquid is being transmitted by pipelines, shall be on duty at all times at the point of discharge from or intake of the vessel during preparation for any pumping operation.
- (17) The owner of the vessel and of the installation to or from which pumping operations will be made shall ensure, in his respective sphere, that sufficient fire-fighting equipment as approved by the Department is available for immediate use should such be required.
- (18) Any untoward occurrence shall be reported immediately to the Department or its representative.
- (19) The approval of the Department shall be obtained on each occasion in respect of each particular vessel before pumping operations commence and any additional conditions stipulated by it shall be observed.
- (20) Operations shall be discontinued should the Department consider such course necessary in the interests of safety.
- (21) When pumping operations cease temporarily valves on the vessel and on the shore pipeline shall be closed.
- (22) On completion of pumping operations pipelines outside storage installations and used for the transmission of inflammable liquids with a flash point less than 61° Celsius shall be thoroughly cleared of the inflammable liquid by flushing with water and shall be kept full of water.
- (23) Notwithstanding the requirements of subregulation (22), the Department may grant exemption from this provision in the case of underwater pipelines used for the transmission of crude oil having a flash point of less than 61° Celsius or any pipeline provided it is patrolled to the satisfaction of the Department.
