## Schedule 15 — Warning labels for external corded blinds

1. **Bottom rail warning label**

2. **Blind warning label**

3. **Tension device warning label**

**cl. 3**

---

**Examples of explanations for tension device warning label to be modified or adapted as required, depending on the type of device used.**

**Example 1: cleat style pull cord tension device**

This cleat is to secure the pull cord and keep it out of reach of young children.  
Fix the cleat securely to a wall or other surface out of reach of young children. Pull the cord taut and wind it tightly around the cleat to hold it in place and keep it out of reach of young children.  
The cleat should be positioned so that the pull cord will be out of reach of young children.

**Example 2: plate and straps style bottom rail tension device**

These straps and anchor plates are to secure the bottom rail in place when the blind is lowered.  
Fix the anchor plates securely to a wall or other surface. When the blind is lowered use the straps to hold the bottom rail in place and under tension.  
Securing the bottom rail reduces the risk of young children becoming entangled in the cords looped around the rail.
